PREFACE

The *Report on Wages in Singapore, 2008* is the twenty-third edition published by the Manpower Research and Statistics Department of the Ministry of Manpower. This Report presents the main findings of the *Survey on Annual Wage Changes, 2008* and the *Occupational Wage Survey, 2008*. The Report also contains wage data collected by the Central Provident Fund Board and various institutions of higher learning. The *National Wages Council (NWC) Wage Guidelines For 2009/2010* is also included in this Report.

The Report consists of 5 parts, totalling 320 pages. Part I highlights the key survey findings on topics such as total and basic wage changes, bonuses as well as the basic and gross wages of common occupations. Part II gives an overview of the methodology, coverage as well as concepts and definitions used in the surveys. Part III presents more detailed occupational wage statistics by gender, age and industry. Part IV provides wage data collected by the Central Provident Fund Board and the various institutions of higher learning. Part V lists the occupations and industries for which wage data are available.

We hope this Report will meet the needs of users for comprehensive and up-to-date wage data. The contents and presentation of the Report are reviewed regularly. We welcome readers' feedback to help us improve the Report. A "Feedback Form" page is enclosed at the end of the publication for readers' use.

We wish to thank the employers who had responded to the surveys and the Nanyang Technological University, National University of Singapore, Singapore Management University, Ngee Ann Polytechnic, Nanyang Polytechnic, Singapore Polytechnic, Temasek Polytechnic, Republic Polytechnic and Institute of Technical Education for their contributions to this publication. We are also grateful to those who have offered valuable comments and suggestions to improve the Report.

PART I

Survey Findings

HIGHLIGHTS

ON ANNUAL WAGE CHANGES, 2008

- With the economic downturn and increased business costs in 2008, employers were more restrained in granting salary increases. Total wages comprising basic wages and bonuses in the private sector rose by 4.2%, down from the growth of 5.9% in 2007. The moderation in total wage increase in 2008 stemmed from the drop in bonus (also known as annual variable component) paid out from 2.36 months in 2007 to 2.31 months in 2008 (-2.1% as opposed to an increase of 8.3% in 2007). The basic wage increase (4.4%) was broadly unchanged from 2007 (4.3%).
- Reflecting slower GDP growth and strong employment gains in the first half of 2008, labour productivity declined by 7.8%, deeper than the drop of 0.8% in 2007. While real wages also declined in 2008, the drop (total: -2.3%; basic -2.1%) was less than the contraction in productivity (-7.8%). Consequently, real wages outpaced productivity growth for the fourth straight year. To minimize cyclical effects, productivity trends are often analyzed over a longer period, preferably over the course of a business cycle. Over the seven years from 2001 to 2008, growth in productivity (1.9% p.a.) had kept pace with gains in total (1.7%) and basic (1.3%) wages.
- As at December 2008, 84% of the workforce in the private sector was under some form of flexible wage system, same as a year ago. Large establishments (employing 200 or more employees) continued to lead in the implementation, with the vast majority (90%) of their workforce having at least one key wage recommendation in their wage system, compared with 75% in small and medium enterprises. These were comparable to the corresponding figures of 89% and 77% in 2007.
- Narrowing the maximum-minimum salary ratio (involving 58% of workforce) remained the most common recommendation adopted by the private sector. This was followed by linking variable bonus to KPI (54%) and having MVC (34%) in the wage structure. The share of workforce with variable bonus linked to KPI rose over the year from 52%, while the share working in establishments that had narrowed/were narrowing the wage ratio declined from 62%. The coverage of workforce with MVC also dipped slightly from the preceding year (35%). Both the larger and unionised establishments continued to lead in adopting each of the three recommendations.
- Only a small minority (1.7%) of private establishments with MVC in their wage structure cut the component in 2008, given that the economic conditions deteriorated sharply only from the last quarter of 2008 when GDP contracted over the year by 4.2%.
- In December 2008, two in five establishments (40%) employing 44% of the private workforce reported that they foresee a need to cut wages in 2009, if business conditions worsen. Another 32% of establishments employing 29% of the workforce had not thought about this issue. The top two common measures of wage cut are cutting the annual variable component (74% of establishments) and basic wage (47%), followed by MVC (15%) as the latter was weighed down by establishments without MVC. Nevertheless, the majority of the firms with MVC intend to cut annual variable bonus (76%) and/or MVC (69%) when reducing wages. Establishments with MVC were more confident of gaining their employees' acceptance of a wage cut, if it has to be implemented in 2009 compared with establishments without MVC; only 24% of MVC establishments foresaw difficulty compared with 29% for establishments without MVC.

SURVEY FINDINGS ON ANNUAL WAGE CHANGES, 2008

1 Introduction

This report examines the wage changes and extent to which employers have adopted the recommendations of the National Wages Council (NWC) in 2008. The findings are based on data from the Survey on Annual Wage Changes, 2008.

Two sets of NWC guidelines were issued for 2008/09. The first set of guidelines issued in May 2008, was made under a more favourable economic environment while taking into account the global economic uncertainty and high inflation. Since then, the economic conditions have deteriorated. The second set of guidelines was issued in January 2009 when NWC was re-convened to take stock of the new situation and review its May's guidelines to help companies and workers manage the downturn.

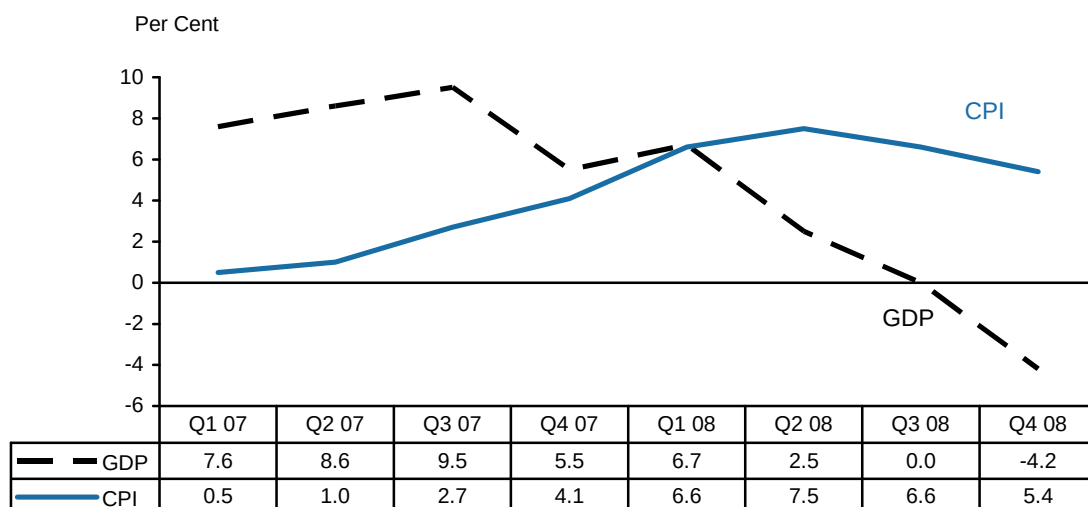

2 Economic Situation

Amid the global financial crisis, the Singapore economy deteriorated sharply, with output contracting in the last quarter of 2008 ([Chart 1](#)). For the whole of 2008, GDP growth moderated to 1.1%, down from 7.8% in 2007. Pulled up by sharp inflationary pressure in the first half of the year, the consumer price index (CPI) rose by 6.5% in 2008, compared with the increase of 2.1% in 2007¹. However, inflationary pressure eased in the second half of the year, with the year-on-year increase in CPI declining from the high of 7.5% in Q2 08 to 5.4% in Q4 08. ([Chart 1](#)). Going forward, inflation is expected to decrease further mainly due to falling commodity prices and the global economic downturn².

¹ Source: Economic Survey of Singapore 2008, MTI

² The year-on-year growth in consumer price index eased further to 2.1% in Q1 09 and -0.7% in Apr 09. Source: Department of Statistics

3 Wage Changes

Overview

Employers more restrained in granting salary increase

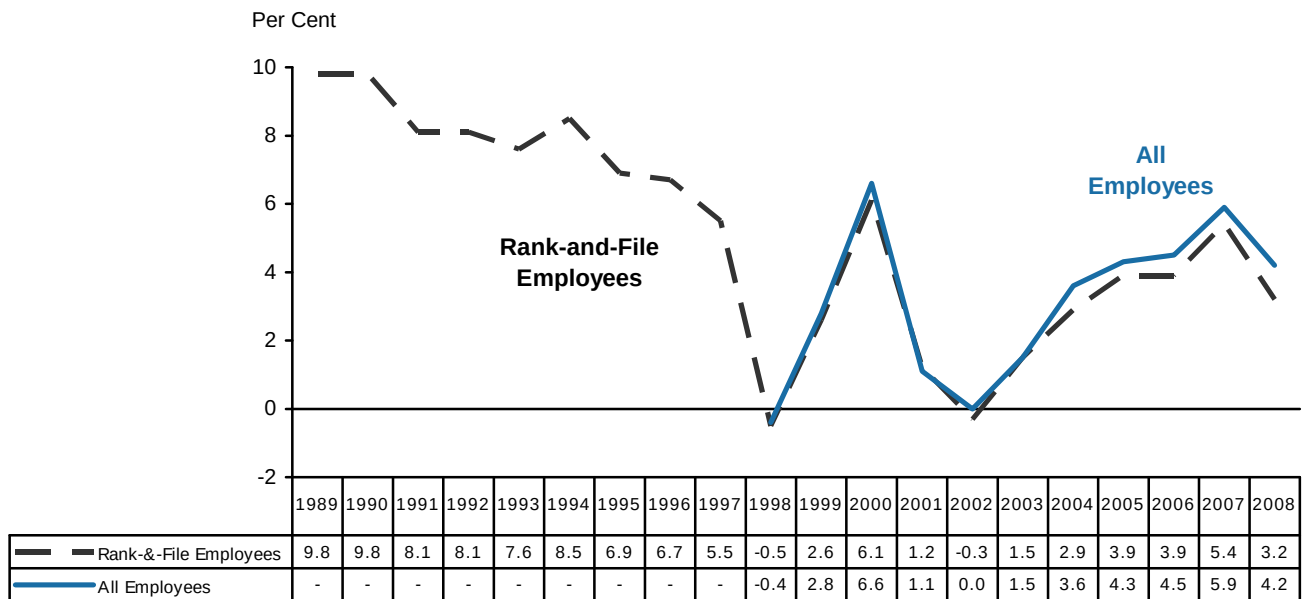

With the economic downturn and increased business costs in 2008, employers were more restrained in granting salary increases. Total wages comprising basic wages and bonuses in the private sector rose by 4.2%, down from the growth of 5.9% in 2007³ (Chart 2). The moderation in total wage increase in 2008 stemmed from the drop in bonus (also known as annual variable component) paid out from 2.36 months in 2007 to 2.31 months in 2008 (-2.1% as opposed to an increase of 8.3% in 2007). The basic wage increase (4.4%) was broadly unchanged from 2007 (4.3%).

As the recession only started to hit in late 2008, the full impact on wages is likely to prevail only in 2009. This is unlike during previous downturns when wages declined by 0.4% in 1998 during the Asian financial crisis and wage growth decelerated sharply from 6.6% in 2000 to 1.1% in the 2001 economic downturn, as the economic deterioration in both periods started earlier in the year⁴.

³ Growth in nominal average monthly earnings (AME) based on CPF records also moderated to 5.4% in 2008 from 6.2% in 2007. The wage data cited in this report are from the Survey on Annual Wage Changes, which is the only source that provides breakdown into total and basic wage changes and for various categories of employees. This source also yields more accurate estimates of changes in wage rates paid to workers as the data pertain to full-time employees on the CPF scheme who were in continuous employment for at least 1 year. In contrast, average monthly earnings data cover both full-time and part-time workers who contribute to the CPF. Hence, the data can be influenced by the changing mix of workers and variations in overtime.

⁴ GDP contraction over the year started in Q2 in 1998 and 2001; and in Q4 in 2008.

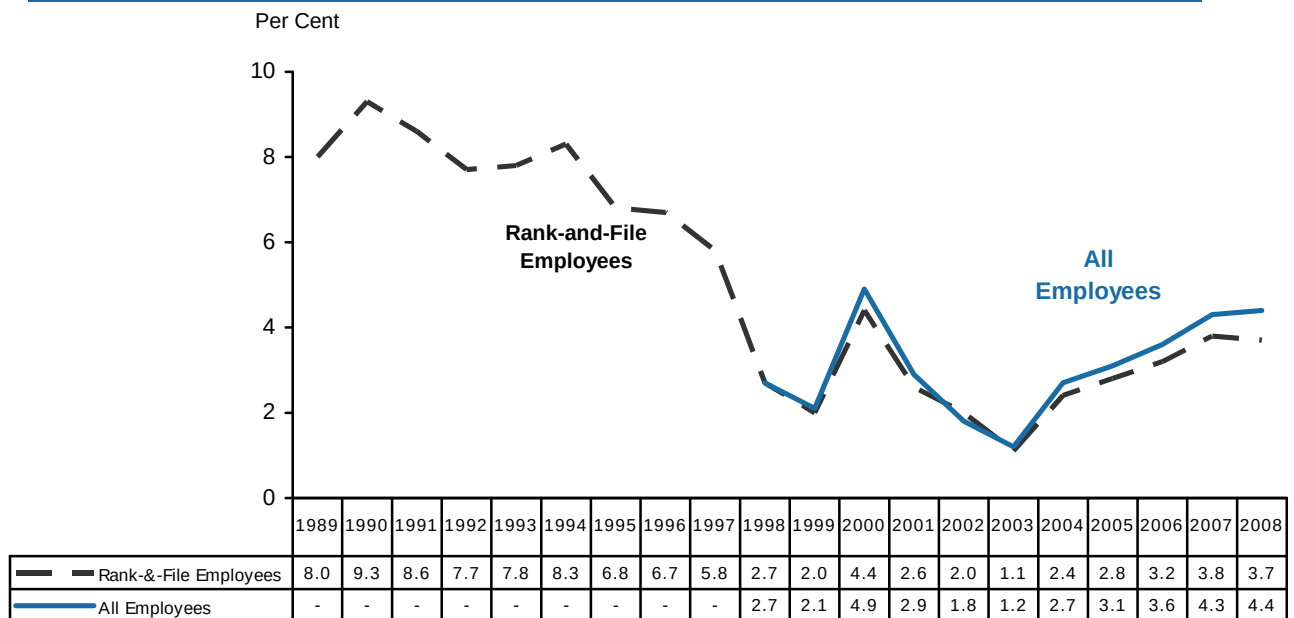

Chart 2 : Total Wage Change, 1989 - 2008

Notes : (1) Total wage change data for all employees were available only from 1998 onwards.

(2) Data on rank-and-file were collected from 2000 onwards. Data before 2000 refer to bargainable employees who were also mainly the rank-and-file.

Chart 3 : Basic Wage Change, 1989 - 2008

Notes : (1) Basic wage change data for all employees were available only from 1998 onwards.

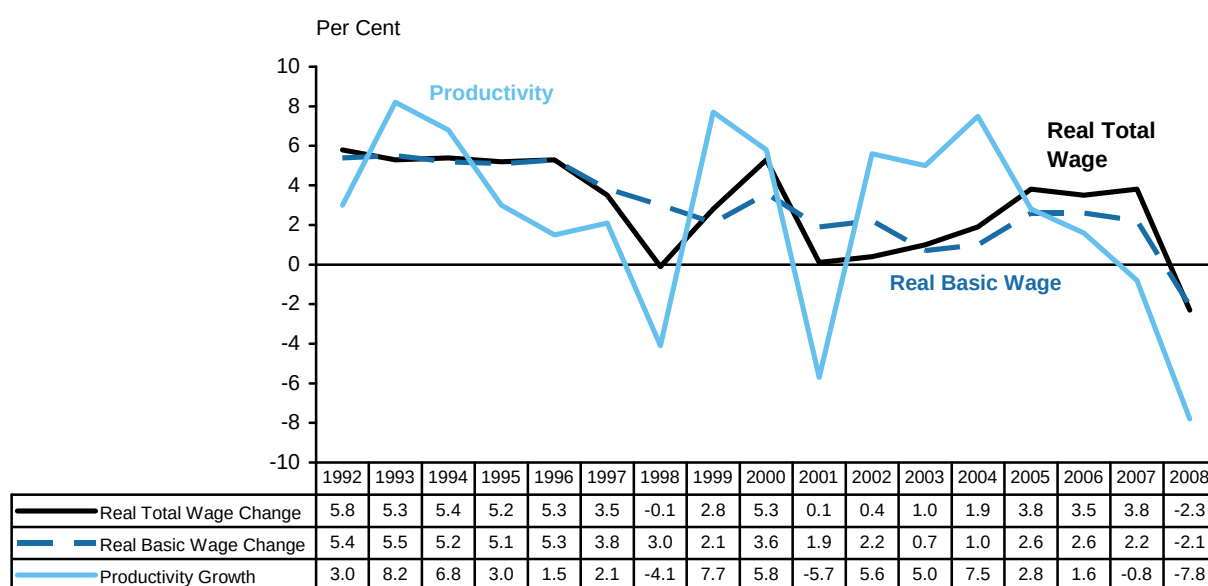

(2) Data on rank-and-file were collected from 2000 onwards. Data before 2000 refer to bargainable employees who were also mainly the rank-and-file.

After adjusting for higher inflation (6.5%), real wages declined by 2.3% (total) and 2.1% (basic) in 2008, as opposed to the gains of 3.8% (total) and 2.2% (basic) in the year before. This was the first time that real wages had declined in a decade. However, unlike in 1998 when nominal wages fell, the decline in real wages in 2008 resulted because nominal wage gains had not kept up with the increase in cost of living.

Real wages outpaced productivity growth for the fourth straight year

Reflecting slower GDP growth and strong employment gains in the first half of 2008, labour productivity declined by 7.8%, deeper than the drop of 0.8% in 2007. While real wages also declined in 2008, the drop (total: -2.3%; basic: -2.1%) was less than the contraction in productivity (-7.8%). Consequently, real wages outpaced productivity growth for the fourth straight year ([Chart 4](#)). Annualised over the four years from 2004 to 2008, productivity growth was -1.1% p.a., while growth in real total and basic wage averaged 2.2% and 1.3% p.a. respectively.

Chart 4 : Annual Changes in Productivity and Real Wage, 1992 - 2008

Source : Department of Statistics, MTI (For Productivity Data)

Note : Total and basic wage change data pertain to all employees from 1998 onwards. Before 1998, data pertain to bargainable employees who were also mainly the rank-and-file.

To minimize cyclical effects, productivity trends are often analyzed over a longer period, preferably over the course of a business cycle. Over the seven years from 2001 to 2008, growth in productivity (1.9% p.a.) had kept pace with gains in total (1.7%) and basic (1.3%) wages ([Table 1](#)).

Table 1 : Annualised Growth of Labour Productivity and Real Wage, 2001 - 2008

	Annualised Change From			
	2001-2008	2003-2008	2004-2008	2005-2008
	(7 years)	(5 years)	(4 years)	(3 years)
Labour Productivity	1.9	0.5	-1.1	-2.4
Real Total Wage	1.7	2.1	2.2	1.6
Real Basic Wage	1.3	1.2	1.3	0.9

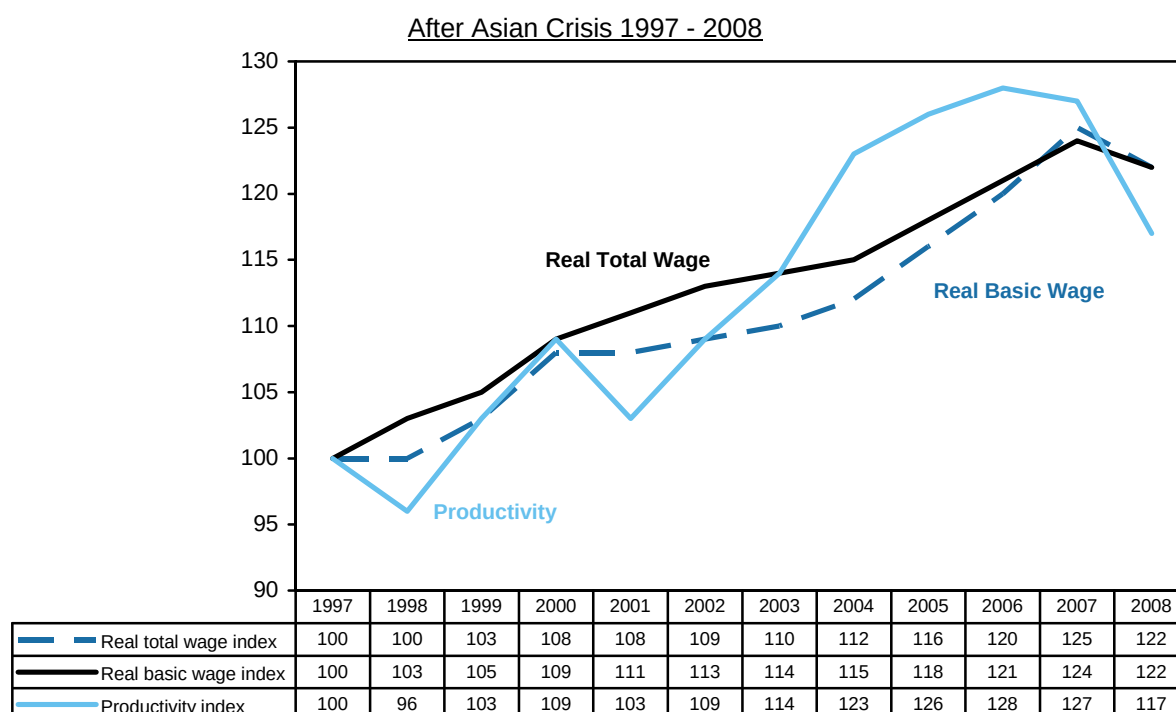

Per Cent

Note : Shaded cell indicates wage gains outstripping productivity growth.

Cumulative gains in real wages outstripped productivity

Dragged down by the recent years of weak productivity performance, cumulative gains in the post-Asian crisis period in real wages outstripped productivity in 2008, following a narrowing of the gap from 2005 onwards ([Chart 5](#)). The last time that cumulative gains in real total wage outstripped productivity was during the 1998 Asian financial crisis and 2001 downturn⁵.

Chart 5 : Productivity and Real Wage Indices (1997 = 100)

Notes : 1) The chart shows the cumulative impact of the annual changes in productivity and wages since 1997.

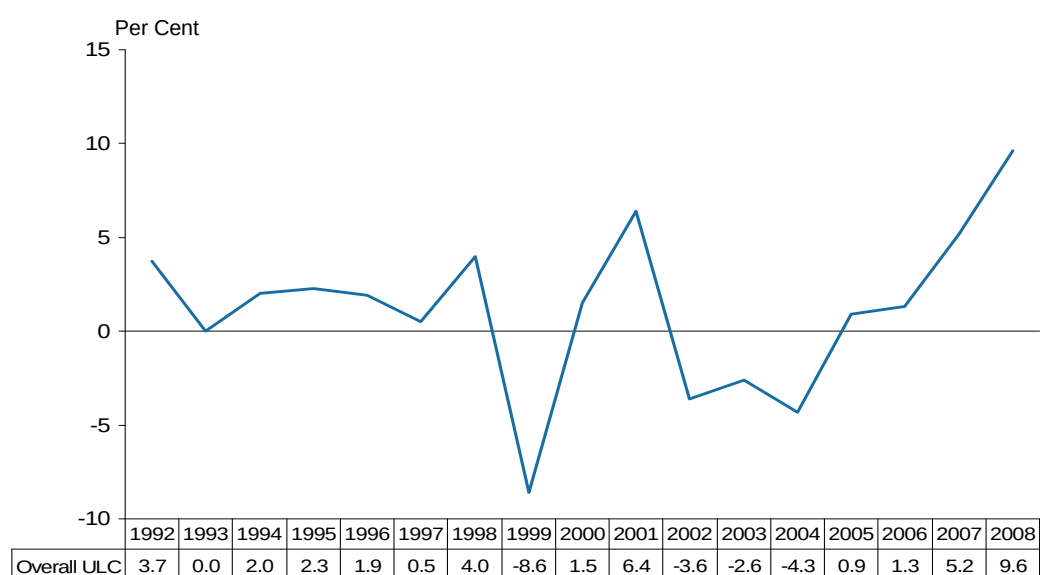

2) Total and basic wage change data pertain to all employees from 1998 onwards. Before 1998, data pertain to bargainable employees who were also mainly the rank-and-file.

⁵ In terms of real basic wage, the cumulative wage gains outstripped productivity gains in 2008 for the first time since 2002.

Increase in overall ULC accelerated to 26-year high

Unit labour cost (ULC) relates total labour cost (comprising wages and salaries, benefits, CPF contributions by employers, foreign workers' levy and skill development levy) to labour productivity⁶. Reflecting the contraction in productivity and gains in wages, the overall ULC rose for the fourth straight year with the increase accelerating to a 26-year high of 9.6% in 2008⁷.

Chart 6 : Change in Unit Labour Cost, 1992 - 2008

Source : Department of Statistics, MTI

⁶ Unit Labour Cost (ULC) measures the cost of manpower required to produce a unit of output. It is calculated by dividing total labour cost over total output. The ULC will rise if increases in labour cost outstrip productivity gains.

⁷ Overall ULC grew by 14.9% in 1982.

4 Total and Basic Wage Changes

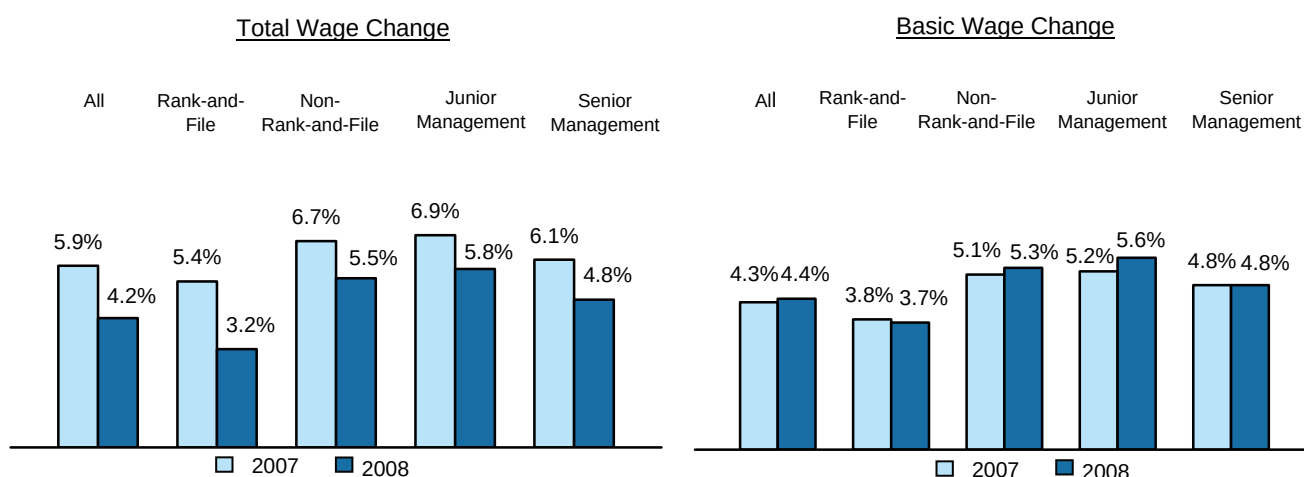

Distribution of Total and Basic Wages by Type of Employees

Total wage increase moderated for all three categories of employees

Total wage increase moderated for all three categories of employees. Rank-and-file (RAF) employees experienced a deeper decline in wage gains (from 5.4% in 2007 to 3.2% in 2008), compared to the senior (from 6.1% to 4.8%) and junior management (from 6.9% to 5.8%).

In terms of basic wage, only the RAF experienced a slightly smaller rise (3.7%) than the year before (3.8%). Junior management led with a basic wage increase of 5.6%, up from 5.2% in 2007, while the senior management experienced a gain of 4.8%, same as the year before.

Chart 7 : Total and Basic Wage Change, 2007 and 2008

Distribution of Establishments by Total and Basic Wages Paid

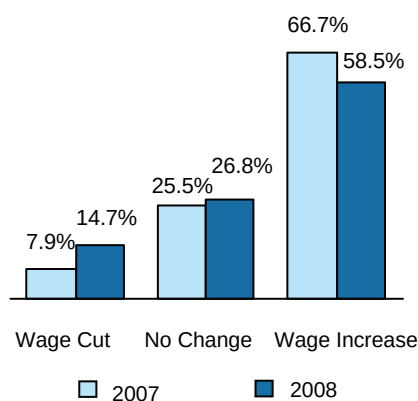

Fewer establishments raised wages but they still formed majority

Amid a deteriorating economy, the proportion of establishments in the private sector that raised total wages of their workers in 2008 dropped from 67% in 2007 to 59%. These establishments also gave smaller wage increases averaging 6.6% than the 7.5% in 2007. Although still forming a minority, 15% of establishments cut wages in 2008, almost double the 7.9% in 2007. Their quantum of wage cut was also deeper (-5.5%) than in 2007 (-3.1%). The remaining 27% of the firms kept their wages unchanged in 2008 (Chart 8).

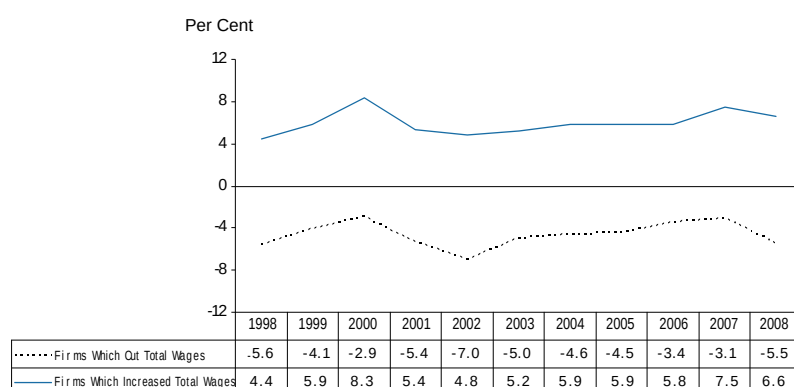

The trends are broadly the same at the sectoral level. Across all sectors, proportionately fewer private establishments raised total wages of their employees and these establishments generally gave smaller wage increases compared to 2007. Correspondingly, all sectors saw proportionately more establishments cutting wages, with the cut generally deeper than the year before. *Wholesale & retail trade* (17%) led with the largest proportion of establishments that implemented wage cuts, followed by *hotels & restaurants, manufacturing and community, social & personal services* (all 16%) and *financial services* (14%) ([Table A1 in Appendix 1](#)).

Chart 8 : Distribution of Establishments by Total Wage Change and Extent of Total Wage Change

Distribution of Establishments by Total Wage Changes, 2007 and 2008

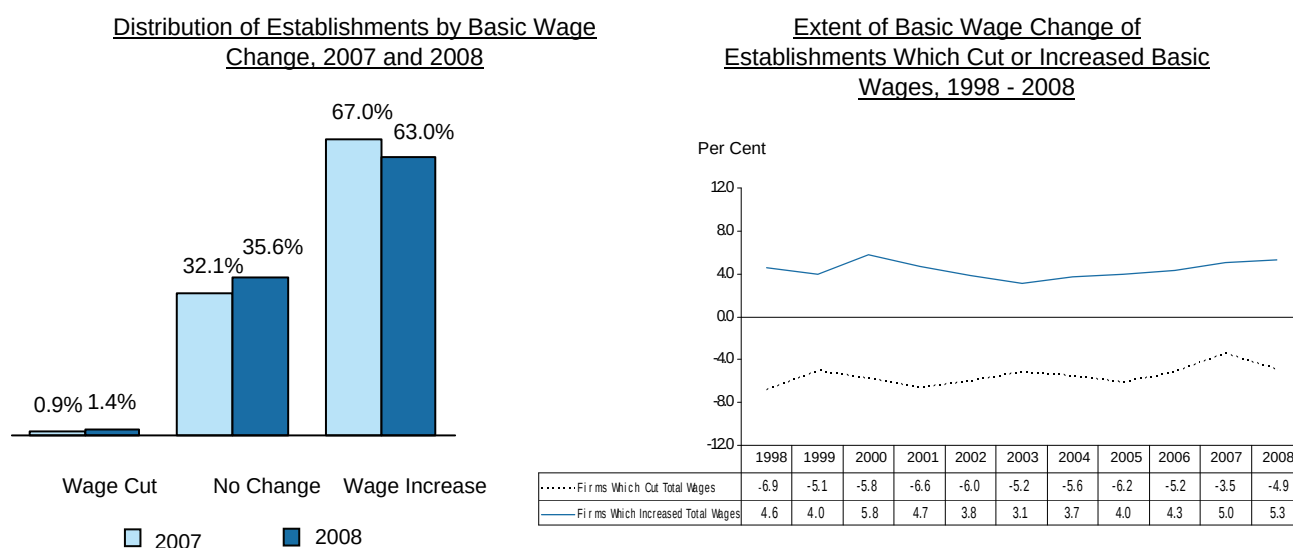

Extent of Total Wage Change of Establishments Which Cut or Increased Total Wages, 1998 - 2008

The trend for basic wage change was broadly similar. The proportion of establishments that raised basic wages dropped from 67% in 2007 to 63% in 2008. Correspondingly, more establishments (36%) froze basic wages than the year before (32%). Although only 1.4% of establishments cut basic wages, this was up from 0.9% in 2007 and the quantum of cut was deeper (-4.9%) than in the preceding year (-3.5%) ([Chart 9](#)).

Chart 9 : Distribution of Establishments by Basic Wage Change and Extent of Basic Wage Change

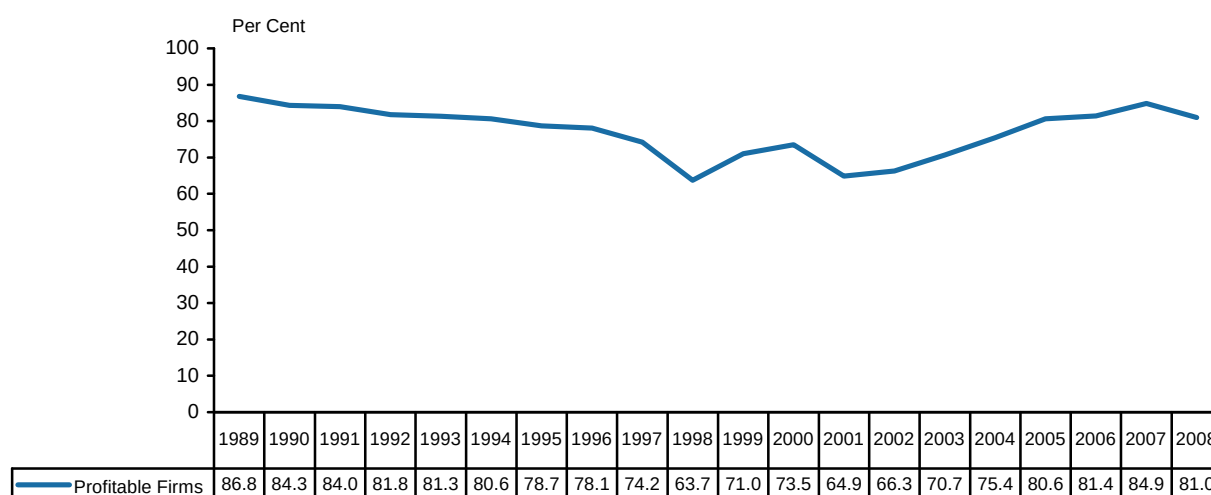

Distribution of Establishments by Profit Status

Fewer profitable establishments

Affected by the global economic crisis, proportionately fewer private establishments (81%) reported that they were profitable in 2008, down from 85% in the previous year (Chart 10).

Chart 10 : Proportion of Profitable Establishments, 1989 - 2008

In 2008, only 44% of the private establishments either outperformed (Category A) or were as profitable as in 2007 (Category B), significantly lower than 63% in 2007. Moreover, the share of firms that incurred a loss (Category D) rose from 15% in 2007 to 19% in

2008 and firms that did not do as well as in the previous year (Category C) also went up from 22% a year ago to 37% ([Table 2](#)).

Table 2 : Distribution of Establishments by Profit Status, 2007 and 2008

		Per Cent	
Category	Profit Status	2007	2008
All Categories		100.0	100.0
A	Firm was profitable and did much better than in the previous year	28.0	16.1
B	Firm was profitable and did as well as in the previous year	35.2	27.5
C	Firm was profitable but did not do as well as in the previous year	21.6	37.4
D	Firm incurred a loss	15.1	19.0

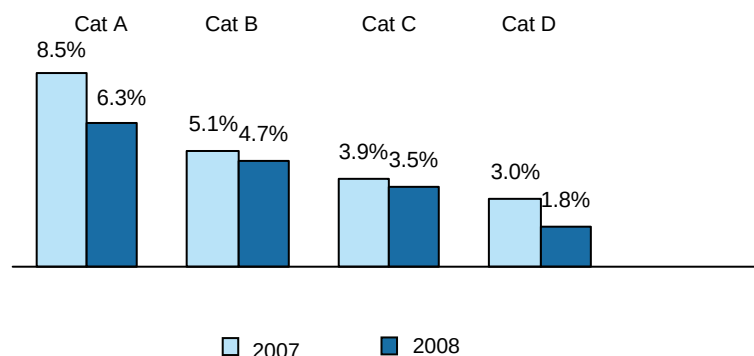

Notes : (1) Based on private establishments that disclosed their profitability status in 2008.
(2) Figures may not sum up to 100% due to rounding.

Total Wage Change by Profit Status

Establishments in all profit categories gave smaller wage rise that was correlated with profitability

Private establishments in all profit categories gave smaller salary rise in 2008 relative to 2007. As many firms have restructured their wage system to tie wages more closely with business performance, wage increase was correlated with profitability. The highly profitable Category A (6.3%) firms gave a significantly larger wage increase than Category B (4.7%) and Category C (3.5%) firms. On average, the loss-making firms also raised total wages slightly by 1.8%, but this was down from 3.0% in 2007 ([Chart 11](#)).

Chart 11 : Total Wage Change by Profit Status for All Employees, 2007 and 2008

Category A : Firm was profitable and did much better than in the previous year
 Category B : Firm was profitable and did as well as in the previous year
 Category C : Firm was profitable but did not do as well as in the previous year
 Category D : Firm incurred a loss

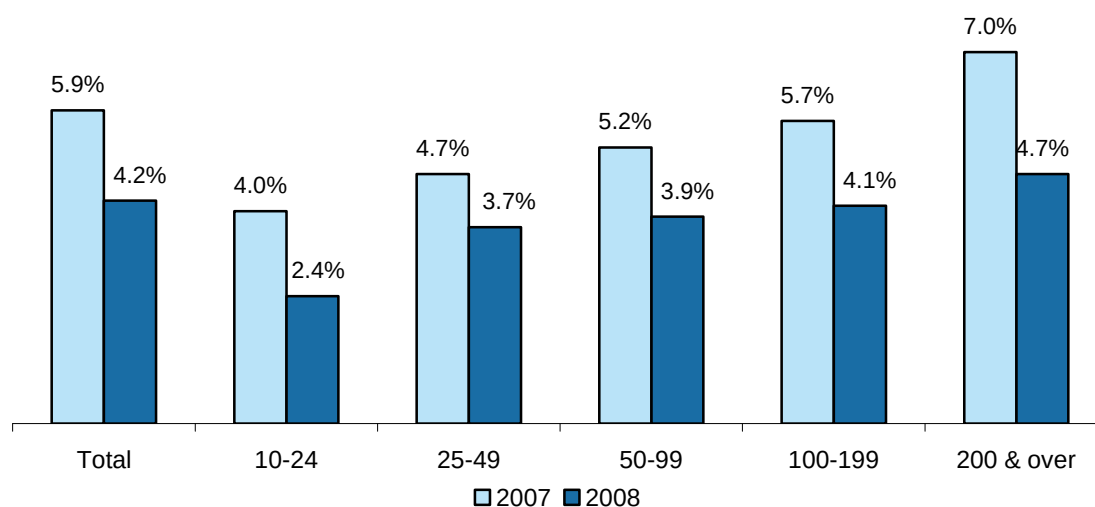

Note : Based on private establishments that disclosed their profitability status in 2008.

Total Wage Change by Firm Size

Total wage gains declined across all firm size categories

In 2008, total wage gains across all firm size groups declined from the year before. Wage gain was led by larger establishments employing at least 200 staff at 4.7%, substantially lower than 7.0% in 2007 ([Chart 12](#)). Expectedly, smaller establishments employing 10-24 workers gave the lowest wage increase at 2.4%, down from 4.0% in the preceding year.

Chart 12 : Total Wage Change by Firm Size, 2007 and 2008

Total and Basic Wage Change by Industry

Most industries gave lower wage increase

All major industries, except for *information & communications*, gave lower total wage increase than a year ago. The higher wage rise in *information & communications* resulted mainly from the higher annual variable components paid in the *publishing and motion picture, media and broadcasting activities* than in the year before. The *financial services* continued to lead with a total wage increase of 8.4% in 2008, but this was down from 11% in 2007. The high wage gains stemmed mainly from the payment of bonus and salary increments in the earlier part of 2008, based on performance spanning 2007 when the economic environment was still favourable ([Table 3](#)).

Table 3 : Total and Basic Wage Change by Industry, 2007 and 2008

Per Cent

Industry	Period	Total Wage Change			Basic Wage Change		
		Total	RAF	NRAF	Total	RAF	NRAF
Total	2008	4.2	3.2	5.5	4.4	3.7	5.3

RAF : Rank-and-file employees

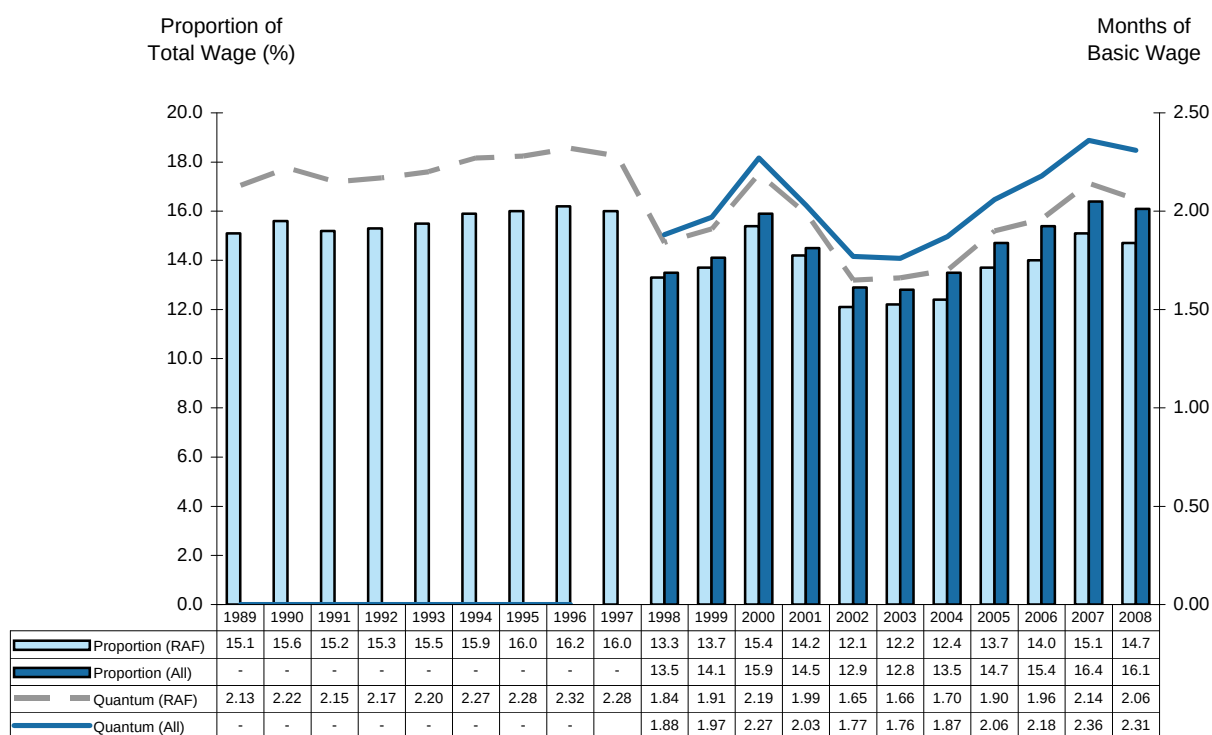

NRAF: Non-rank-and-file employees comprise junior and senior management employees

5 Annual Variable Component

Annual variable component declined by 2.1% as opposed to 8.3% rise in the earlier year

The private sector paid out an annual variable component (comprising the annual wage supplement and variable bonus) averaging 2.31 months of basic wage in 2008, down 2.1% from the 2.36 months in 2007. Overall, annual variable component formed 16.1% of total wages in 2008, down slightly from the high of 16.4% in 2007.

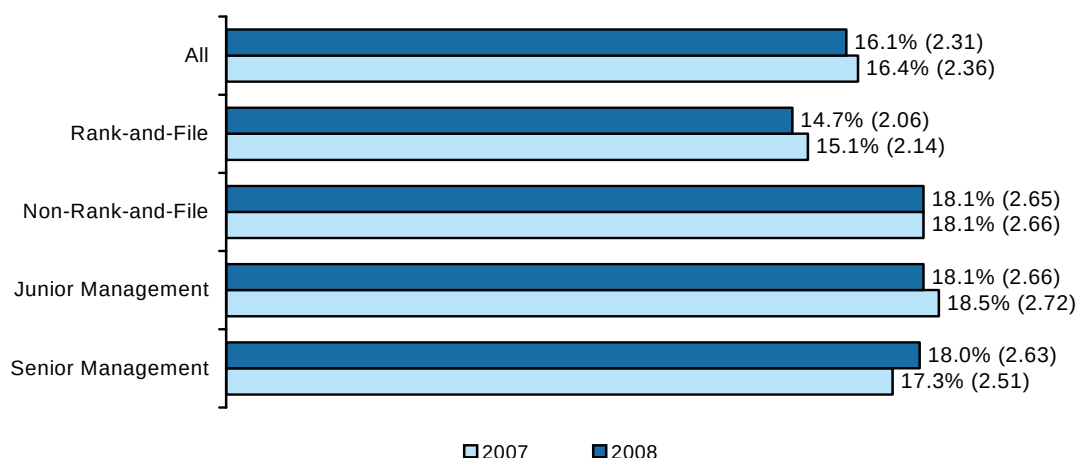

Chart 13 : Annual Variable Component, 1989 - 2008

Note : Data for all employees are available from 1998 onwards. Prior to this, data for RAF pertain to bargainable employees who were also mainly the rank-and-file.

Bonuses paid to the RAF and junior management dropped by 3.7% and 2.2% respectively in 2008. Senior management saw a slight increase in bonus payout of 4.8% from 2.51 months to 2.63 months.

Chart 14 : Annual Variable Component as a Proportion of Total Annual Wages, 2007 and 2008

Notes : (1) Figures in parenthesis refer to annual variable component in months of basic wage.
 (2) Non-rank-and-file employees comprise junior and senior management employees.

46% establishments gave out more than one month of annual variable component, down slightly from 49% in 2007 ([Table 4](#)). Meanwhile, the share of firms which did not pay any annual variable component or paid less than 1 month edged up to 33% from 30%. The majority (73%) of them were small establishments employing less than 50 employees.

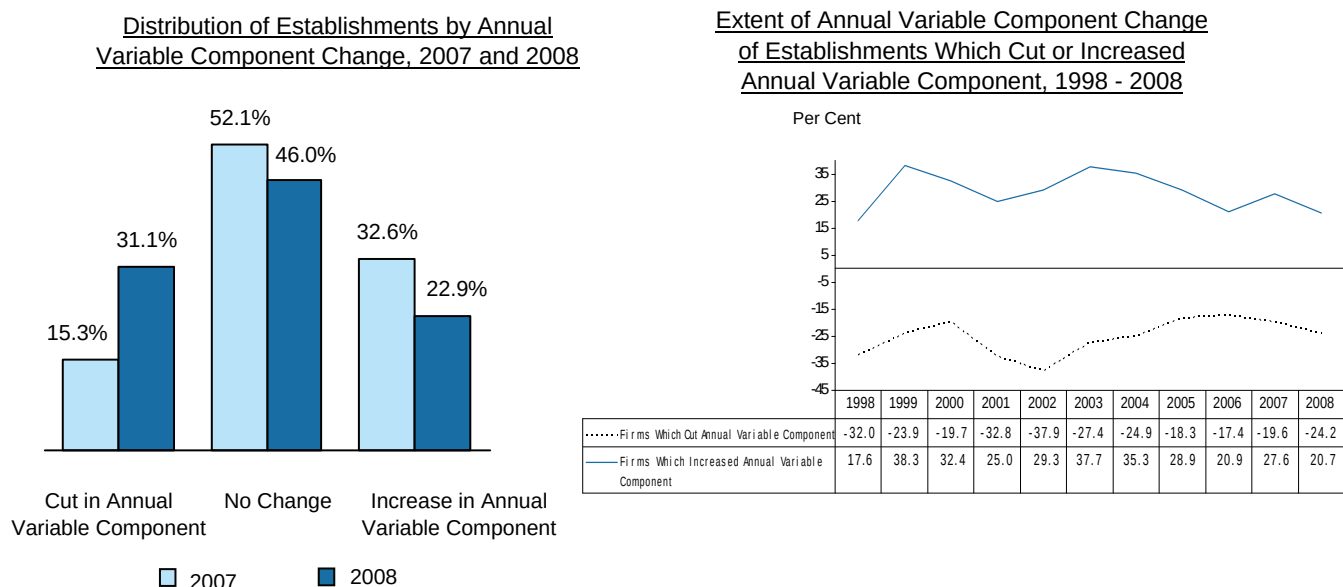

Table 4 : Distribution of Establishments by Quantum of Annual Variable Component Paid, 2007 and 2008

Quantum Paid	Per Cent	
	2007	2008
Total	100.0	100.0
None	19.7	21.2
> 0 to 0.5 months	5.7	6.0
> 0.5 to less than 1 month	4.4	5.3
1 month	21.5	21.2
> 1 to 2 months	23.8	22.1
> 2 to 3 months	14.6	13.8
> 3 months	10.4	10.4

Note : Figures may not sum up to 100% due to rounding.

Reflecting the economic downturn, the proportion of establishments that cut the annual variable component of their workers in 2008 (31%) doubled from 2007 (15%). These firms cut bonuses by an average of 24%, compared with 20% in 2007. A smaller share of establishments (23% down from 33%) paid more bonuses in 2008, but the bonus increase was smaller (21%) than in the year before (28%). The remaining half of the establishments (46%) kept their bonuses unchanged in 2008 ([Chart 15](#)).

Chart 15 : Distribution of Establishments by Annual Variable Component Change and Extent of Change

Note : Based on private establishments with annual variable component in their wage structure.

Annual Variable Component by Profit Status

The most profitable firms gave the highest bonus

Expectedly, the highly profitable (Category A) establishments paid the largest quantum (2.64 months of basic wages) of bonus, while loss-making firms (Category D) gave the least (1.59 months of basic wages).

Table 5 : Annual Variable Component by Profit Status, 2008

Months of Basic Wage		
Category	Profit Status	Total
A	Firm was profitable and did much better than in the previous year	2.64
B	Firm was profitable and did as well as in the previous year	2.22
C	Firm was profitable but did not do as well as in the previous year	2.43
D	Firm incurred a loss	1.59

Note : Based on private establishments that disclosed their profitability status in 2008.

Annual Variable Component by Industry

Many industries gave lower annual variable component

All industries except for *hotels & restaurants*, *information & communications*, *financial services* and *administrative & support services*, paid lower annual variable component than a year ago. Many industries gave at least two months of annual variable component, except for *administrative & support services* (1.08 months), *construction* (1.27 months), *hotels & restaurants* (1.55 months) and *real estate & leasing services* (1.71 months). *Financial services*, which is known for having a high bonus component in its wages, continued to have the largest bonus payout of 3.74 months in 2008. On the other hand, *administrative & support services* continued to pay the lowest annual variable component (1.08 months) especially for its RAF employees (0.96 months).

Table 6 : Annual Variable Component by Industry, 2007 and 2008

Months of Basic Wage				
Industry	Period	Total	RAF	NRAF

	2007	2.39	2.36	2.44

RAF : Rank-and-file employees

NRAF: Non-rank-and-file employees comprise junior and senior management employees

To help workers cope with high inflation, the NWC in its first set of guidelines issued in May 2008 recommended companies to give a one-off special payment to RAF workers with heavier weightage for low wage workers⁸. This section presents findings on employers' response to the NWC recommendation on the one-off special payment.

Majority did not give one-off special payment to RAF, amid easing of inflationary pressure

As at December 2008, 13% of private establishments with RAF employees had given/intended to give the one-off special payment to their RAF employees. Amid easing of inflationary pressure, the majority (82%) did not give and had no plans to give a one-off special payment. A minority (4.7%) was still considering whether to pay in their next wage review ([Table 7](#)).

Unionised sector fared better in the implementation

The unionised sector fared better than the non-unionised sector in implementing the one-off special payment. Almost one in two unionised establishments (48%) gave/intended to give this one-off payment compared to only one in ten (10%) non-unionised establishments.

...similarly so for large establishments

Large establishments employing 200 or more staff led in the implementation of the one-off special payment. Three out of ten (30%) large establishments gave/intended to give the payment, compared with only 11% for the smaller establishments.

⁸ Low wage workers generally refer to local employees who earn around \$1,200 or less per month on a full-time basis.

Table 7 : Distribution of Establishments by Whether They Had Given a One-Off Special Payment to RAF Employees, Dec 2008

Establishment	Total	Yes			Considering Whether to Pay in Next Wage Review	Did Not Pay & No Plans to Pay
		Sub-Total	Had Given	Not Yet Decided on Details		
All Industries	100.0	13.3	12.9	0.4	4.7	82.0
By Establishment Size						
25-199 Employees	100.0	11.1	10.7	0.4	4.7	84.2
200 or More Employees	100.0	29.9	29.2	0.7	4.8	65.2
By Union Status						
Unionised Establishments	100.0	48.4	48.0	0.4	4.4	47.1
Non-Unionised Establishments	100.0	10.0	9.5	0.4	4.8	85.3

Notes : (1) Based on establishments with RAF employees.
(2) Figures may not sum up to 100% due to rounding.

Financial services (25%) had the highest proportion of establishments that gave/intended to give a one-off special payment, followed by *information & communications* (20%), *manufacturing* and *wholesale & retail trade* (both 17%). In contrast, establishments in *construction* (5.3%) and *administrative & support* (6.9%) had the lowest proportion (Table 8).

Table 8 : Distribution of Establishments by Whether They Had Given a One-Off Special Payment to RAF Employees by Industry, Dec 2008

Per Cent

Industry	Total	Yes			Considering Whether to Pay in Next Wage Review	Did Not Pay & No Plans to Pay
		Sub-Total	Had Given	Not Yet Decided on Details		
Total	100.0	13.3	12.9	0.4	4.7	82.0
Manufacturing	100.0	16.8	16.6	0.2	5.9	77.3
Construction	100.0	5.3	5.1	0.3	5.6	89.1
Services	100.0	14.3	13.7	0.6	3.9	81.8

Community, Social & Personal Services	100.0	15.3	14.4	0.9	3.5	81.2

Notes : (1) Based on establishments with RAF employees.
(2) Figures may not sum up to 100% due to rounding.
(3) '-': nil or negligible.

The most common practice was to give equally to all RAF and in cash

The majority of establishments that gave a one-off special payment, paid to all their RAF (11% of all establishments with RAF employees). The most common practice was to give equally to all their RAF (7.5% of all establishments with RAF employees), followed by giving to all but with higher payout to those earning low wages (2.7%). A minority (2.1%) gave only to the RAF earning low wages ([Table 9](#)).

Table 9 : Distribution of Establishments That Had Given One-Off Special Payment to RAF Employees by Type of RAF Employees, Dec 2008

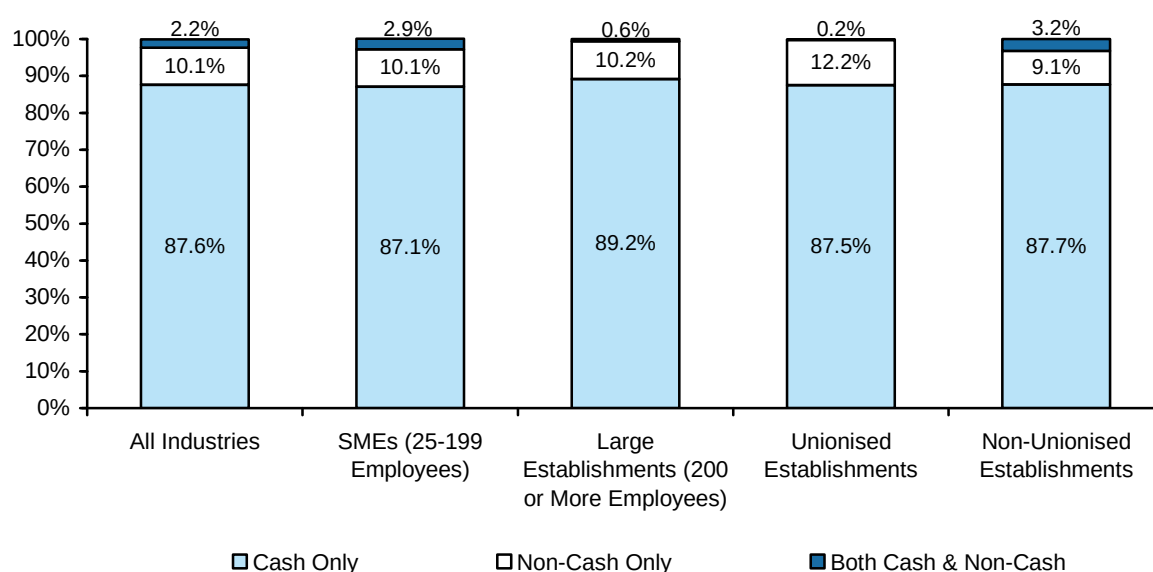

Per Cent

Establishment	Total	Paid to All RAF					Paid Only to Low Wage RAF
		Sub-Total	With Low Wage RAF			No Low-Wage RAF but With Payout to Other RAF	
			Higher Payout for Low Wage RAF	Equal Payout for Low Wage RAF	Lower Payout for Low Wage RAF		
All Industries	12.9	10.8	2.7	7.5	0.1	0.4	2.1
By Establishment Size							
25-199 Employees	10.7	8.9	2.1	6.4	-	0.4	1.7
200 or More Employees	29.2	24.7	7.3	16.3	0.2	0.9	4.5
By Union Status							
Unionised Establishments	48.0	42.5	12.7	27.5	0.1	2.1	5.5
Non-Unionised Establishments	9.5	7.8	1.8	5.7	0.1	0.3	1.7

Notes : (1) Based on establishments with RAF employees.
(2) Figures may not sum up to 100% due to rounding.
(3) '-': nil or negligible.

Nine in ten (88%) of the establishments that made the one-off special payment gave in terms of cash. The remaining 10% gave in non-cash terms such as supermarket vouchers and 2.2% gave in both cash and non-cash terms ([Chart 16](#)).

Chart 16 : Distribution of Establishments That Had Given a One-Off Special Payment to RAF Employees by Mode of Payment, Dec 2008

Notes : (1) Based on establishments that had given a one-off special payment to RAF employees.
(2) Figures may not sum up to 100% due to rounding.

Median payout was \$250

Private establishments gave a median payout of \$250 to their RAF workers. Though proportionately fewer non-unionised establishments adopted the NWC recommendation, they gave higher median payout (\$250) than the unionised counterparts (\$200). Among establishments that paid to all their RAF workers, they typically gave more to low-wage RAF (\$250) than to the RAF who were not earning low-wages (\$200).

Table 10 : Mean and Median Payout of One-Off Special Payment to RAF Employees, Dec 2008

Establishment	Overall		Paid to All RAF						Paid Only to Low Wage RAF	
			Mean (\$)	Median (\$)	Low Wage RAF		Non Low Wage RAF			
	Mean (\$)	Median (\$)			Mean (\$)	Median (\$)	Mean (\$)	Median (\$)	Mean (\$)	Median (\$)
All Industries	331	250	332	250	343	250	316	200	328	250
By Establishment Size										
25-199 Employees	332	250	329	250	342	250	313	200	344	300
200 or More Employees	330	250	339	250	346	250	322	200	284	200
By Union Status										
Unionised Establishments	272	200	274	200	285	250	257	200	260	200
Non-Unionised Establishments	363	250	366	250	377	300	350	250	349	300

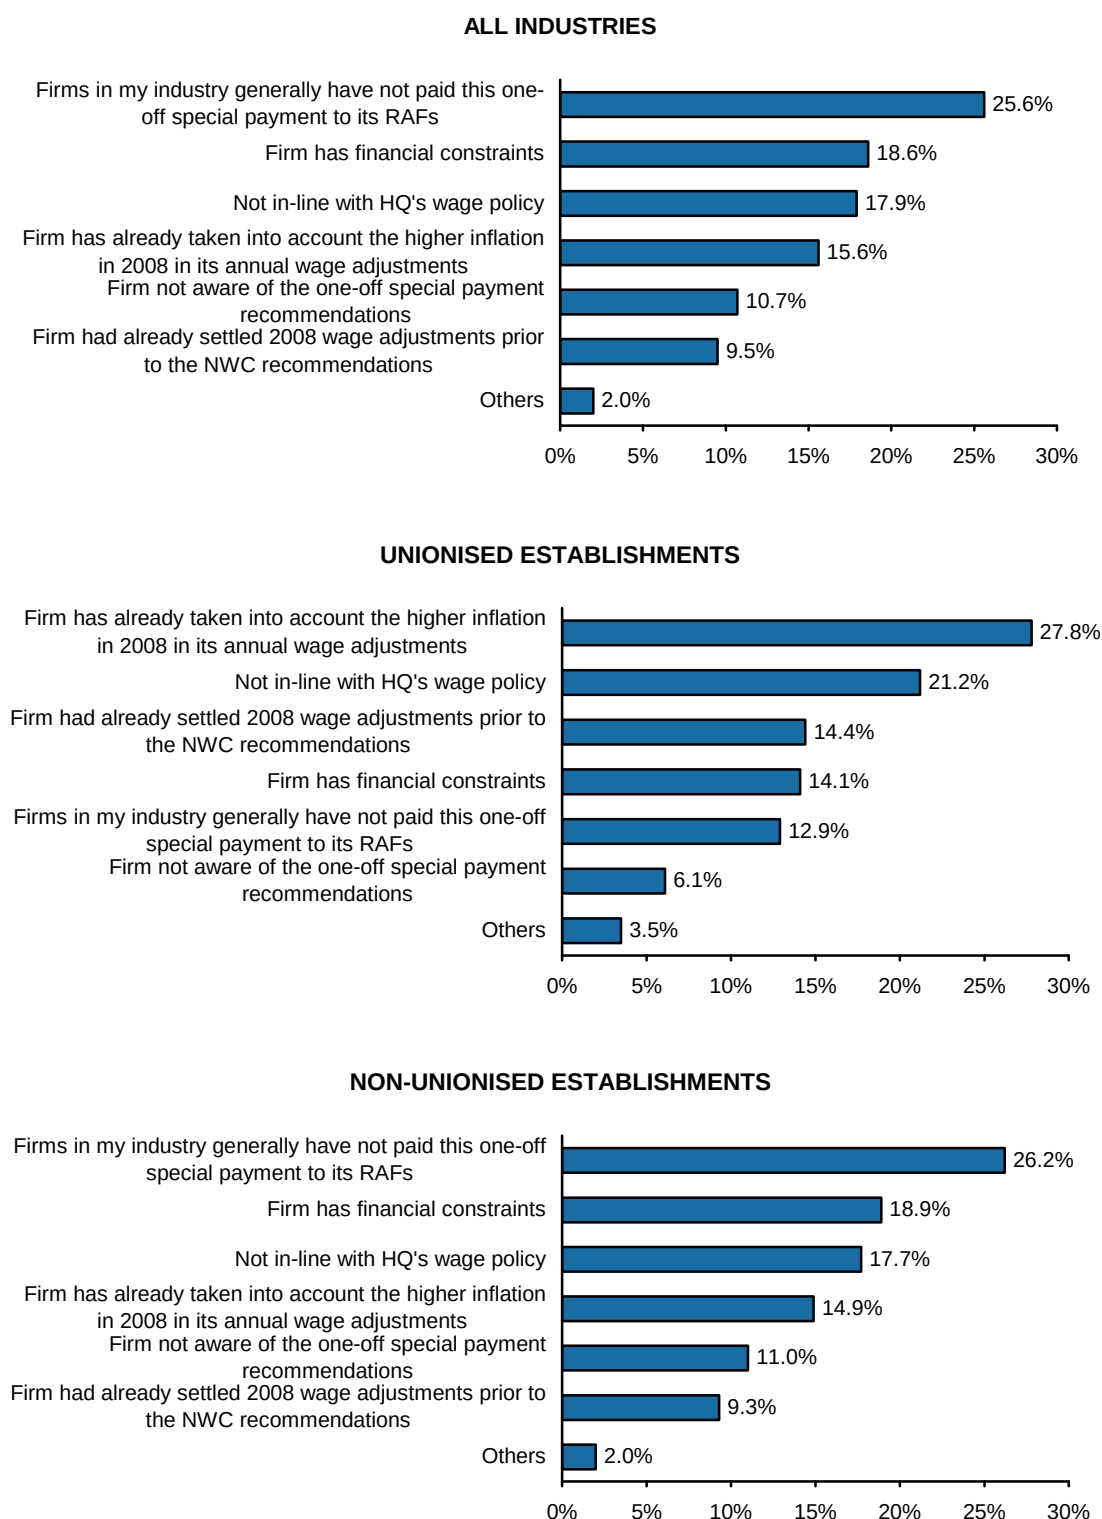

Note : Based on establishments that had given a one-off special payment to RAF employees.

Although construction had the smallest proportion of establishments giving the one-off special payment, its payout was the highest (median: \$425). In contrast, the payout was the lowest in *administrative & support services* (median: \$120), even as the industry had the second lowest proportion giving the payout. Details are in [Table A2 in Appendix 1](#).

Industry norm, financial constraint and non-alignment with HQ policy were common reasons for not giving one-off special payment

The top three common reasons cited for not giving one-off special payment to RAF employees were that the payment was not widely adopted in their industry (26%), establishments have financial constraints (19%) and the special payment was not in line with their HQ's wage policy (18%). A smaller group of establishments, either had already taken into account the higher inflation in 2008 in their wage adjustments (16%) or had already settled their wage adjustments (9.5%) before the NWC's 2008/09 recommendations. Another one in ten establishments (11%) reported that they were not aware of the NWC's recommendation ([Chart 17](#)).

Chart 17 : Distribution of Establishments Which Did Not Pay the One-Off Special Payment to Their RAF Employees by Main Reason and Union Status, Dec 2008

Note : Figures may not sum up to 100% due to rounding.

7 Wage Restructuring Outcome

This section of the report updates the progress of firms in restructuring the wage system to be more flexible and performance based. Data on wage restructuring pertain to private sector establishments each employing at least 25 workers.

Target

To ensure sustained competitiveness, the tripartite partners have been working closely to promote and facilitate the implementation of flexible wage systems. Specifically, firms are encouraged to implement the following key wage recommendations:

- (i) implement variable bonus linked to Key Performance Indicators (KPI)⁹;
- (ii) introduce the Monthly Variable Component (MVC) in wage structure;
- (iii) narrow the maximum-minimum salary ratio for the majority of their employees to an average of 1.5 or less¹⁰.

Recognising that firms may require different forms of wage flexibility to meet their specific circumstances, employers may choose to implement only the recommendations that are relevant to them.

Progress of Key Wage Recommendations

Large and unionised establishments continue to lead in the adoption of a flexible wage system

As at December 2008, 84% of the workforce in the private sector was under some form of flexible wage system¹¹, same as a year ago ([Chart 18](#)). Large establishments (employing 200 or more employees) continued to lead in the implementation, with the vast majority (90%) of their workforce having at least one key wage recommendation in their wage system, compared with 75% in small and medium enterprises. These were comparable to the corresponding figures of 89% and 77% in 2007.

⁹ In the survey, establishments are considered to have implemented variable bonus linked to KPI, if they have formulated and communicated to their employees, the KPI for the payment of the variable bonus.

¹⁰ Establishments can decide on appropriate ratio for different jobs and industries. In the survey, establishments are considered to have implemented this recommendation if they have narrowed the salary ratio to 1.5 or less, decided to/in the process of narrowing the salary ratio or all along have a maximum-minimum ratio at 1.5 or less.

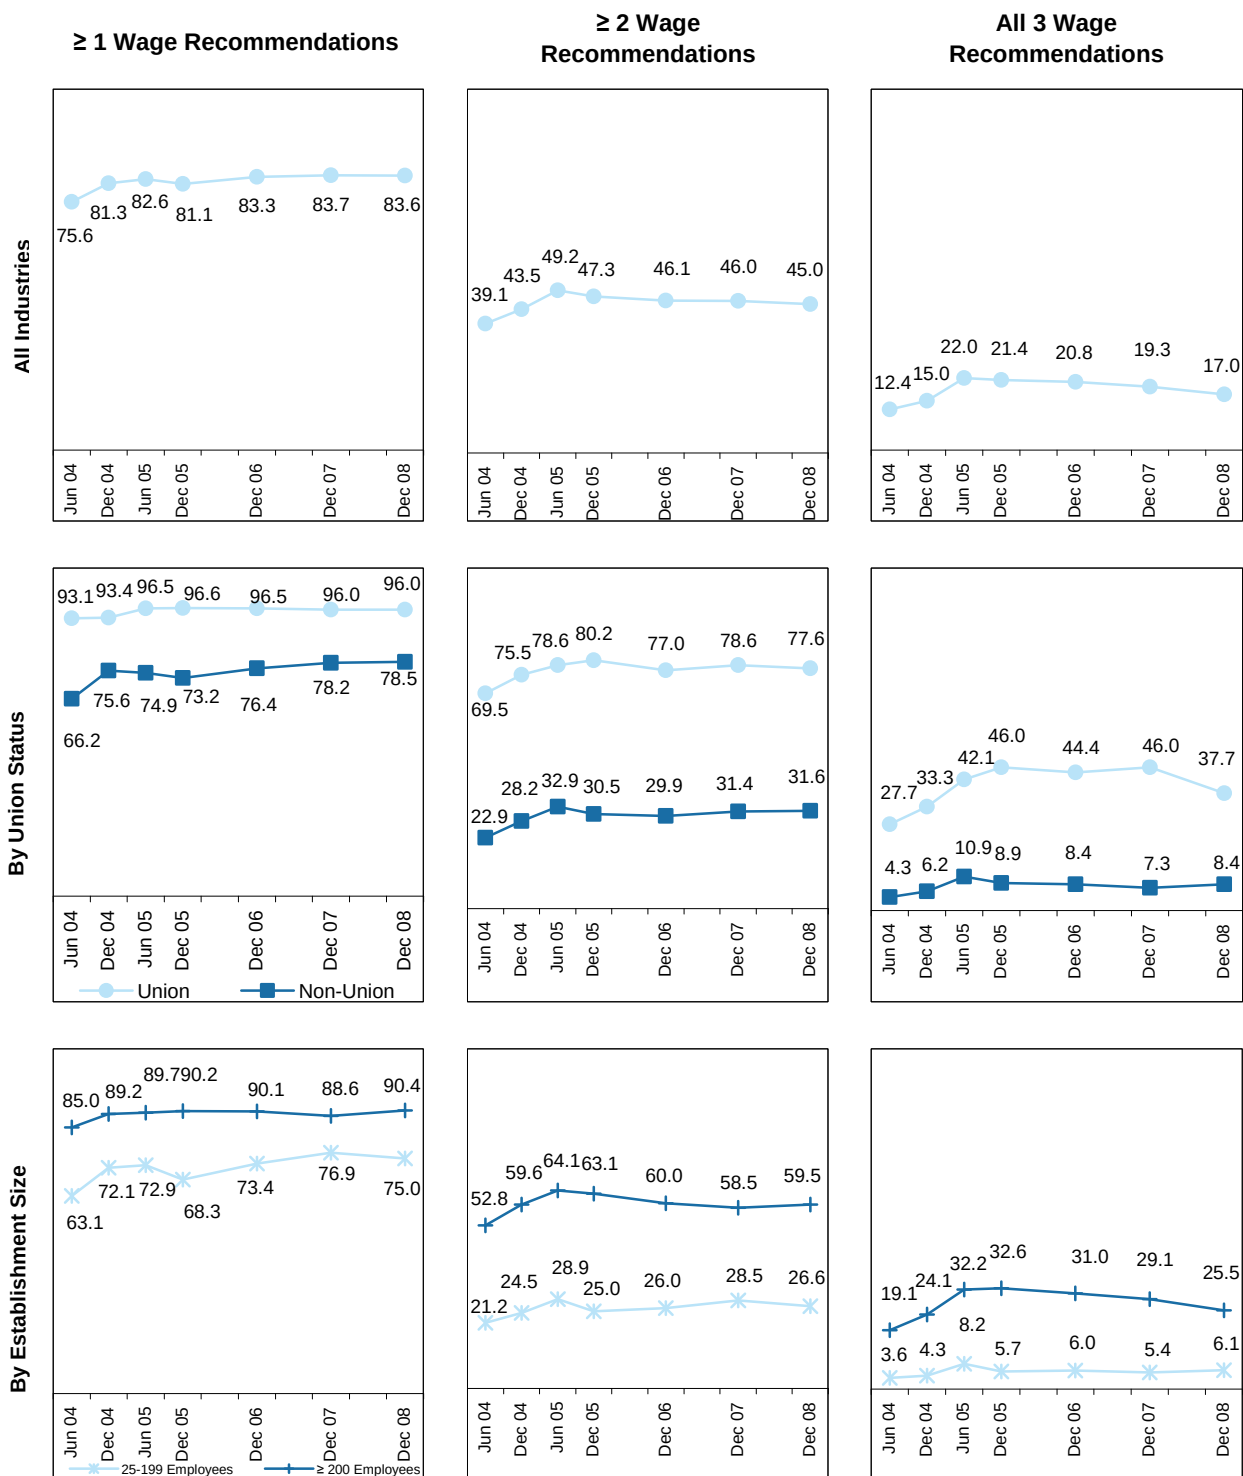

¹¹ Establishments are considered to have some form of flexible wage system when they have at least one key wage recommendation incorporated into their wage structure.

The unionised sector continued to outperform the non-unionised sector in the implementation of wage flexibility. Nearly all (96%) the workforce in unionised establishments have at least one key wage recommendation in their wage system compared with only 79% in the non-unionised sector in December 2008. Both were broadly unchanged from 2007 (unionised: 96%, non-unionised: 78%).

Less than one in five (17%) private sector employees worked in establishments that had a fully flexible wage system comprising all three key wage recommendations in 2008, down from 19% in 2007. Including employees in establishments with two recommendations (28%), 45% of private employees had wage systems that incorporated at least two wage recommendations, comparable with 46% in 2007.

Chart 18 : Proportion of Employees by Number of Key Wage Recommendations Implemented, 2004 - 2008

Per Cent

Financial services (94%), *information & communications* (93%) and *community, social & personal services* (90%) had among the highest share of employees with some form of wage flexibility while *marine and professional services* (both 72%) as well as *construction* (74%) had the least. *Marine* and *construction* industry are less likely to implement the wage recommendations because of their high reliance on foreign workers. Excluding these two industries, the proportion of workforce in the private sector with at least one wage recommendation improved to 86% in 2008 compared with 84% when they were included. Likewise, the share of employees with at least two wage recommendations rose to 51% from 45%. Details are in [Table A3 in Appendix 1](#).

Majority of establishments without key recommendations were satisfied with flexibility of their existing wage system

Same as in 2007, 16% of the workforce in the private sector was working in establishments that had yet to implement any of the key wage recommendations in 2008 ([Table 11](#)). The bulk of them, representing 11% of all private sector employees, were working in establishments that were satisfied with their wage flexibility as employers felt they could reward/cut wages based on company performance without the flexible wage components recommended by the tripartite partners. In some of the establishments, the existing wage systems were already inherently flexible (e.g. a sizeable component of the wages is commission-based). The remaining establishments that were not satisfied with the flexibility of their wage system but had yet to implement the taskforce recommendations employed only 5.1% of the workforce, up from 4.5% a year ago.

On average, 95% of the private sector workforce were in establishments with some form of wage flexibility (84%) or were satisfied with the wage flexibility of the establishments even though their establishments have yet to implement any key wage recommendations (11%).

Table 11 : Proportion of Employees in Establishments That Did Not Implement Any of the Key Wage Recommendations, 2004 - 2008

Per Cent

Employee	Period	Did Not Implement Any Wage Recommendation	Satisfied/Not Satisfied With Level of Flexibility in Wage System	
			Satisfied	Not Satisfied
All Industries	Dec-08	16.4	11.3	5.1
	Dec-07	16.3	11.8	4.5
	Dec-06	16.7	11.4	5.3

Notes : (1) Figures may not sum up due to rounding.
(2) '-': nil or negligible.

Large and unionised establishments continue to lead in adopting each of the three wage recommendations

Narrowing the maximum-minimum salary ratio (involving 58% of workforce) remained the most common recommendation adopted by the private sector. This was followed by linking variable bonus to KPI (54%) and having MVC (34%) in the wage structure. The share of workforce with variable bonus linked to KPI rose over the year from 52%, while the share working in establishments that had narrowed/were narrowing the wage ratio declined from 62%. The coverage of workforce with MVC also dipped slightly from the preceding year (35%). Both the larger and unionised establishments continued to lead in adopting each of the three recommendations.

Table 13 : Proportion of Employees by Key Wage Recommendations, 2004 - 2008

Per Cent				
Employee	Period	Max-Min Ratio	MVC	Variable Bonus Linked to KPI

	Dec-04	58.3	15.8	35.9
	Jun-04	48.6	14.0	30.7

Note : Figures do not sum up to 100% as establishments can implement more than one key wage recommendation.

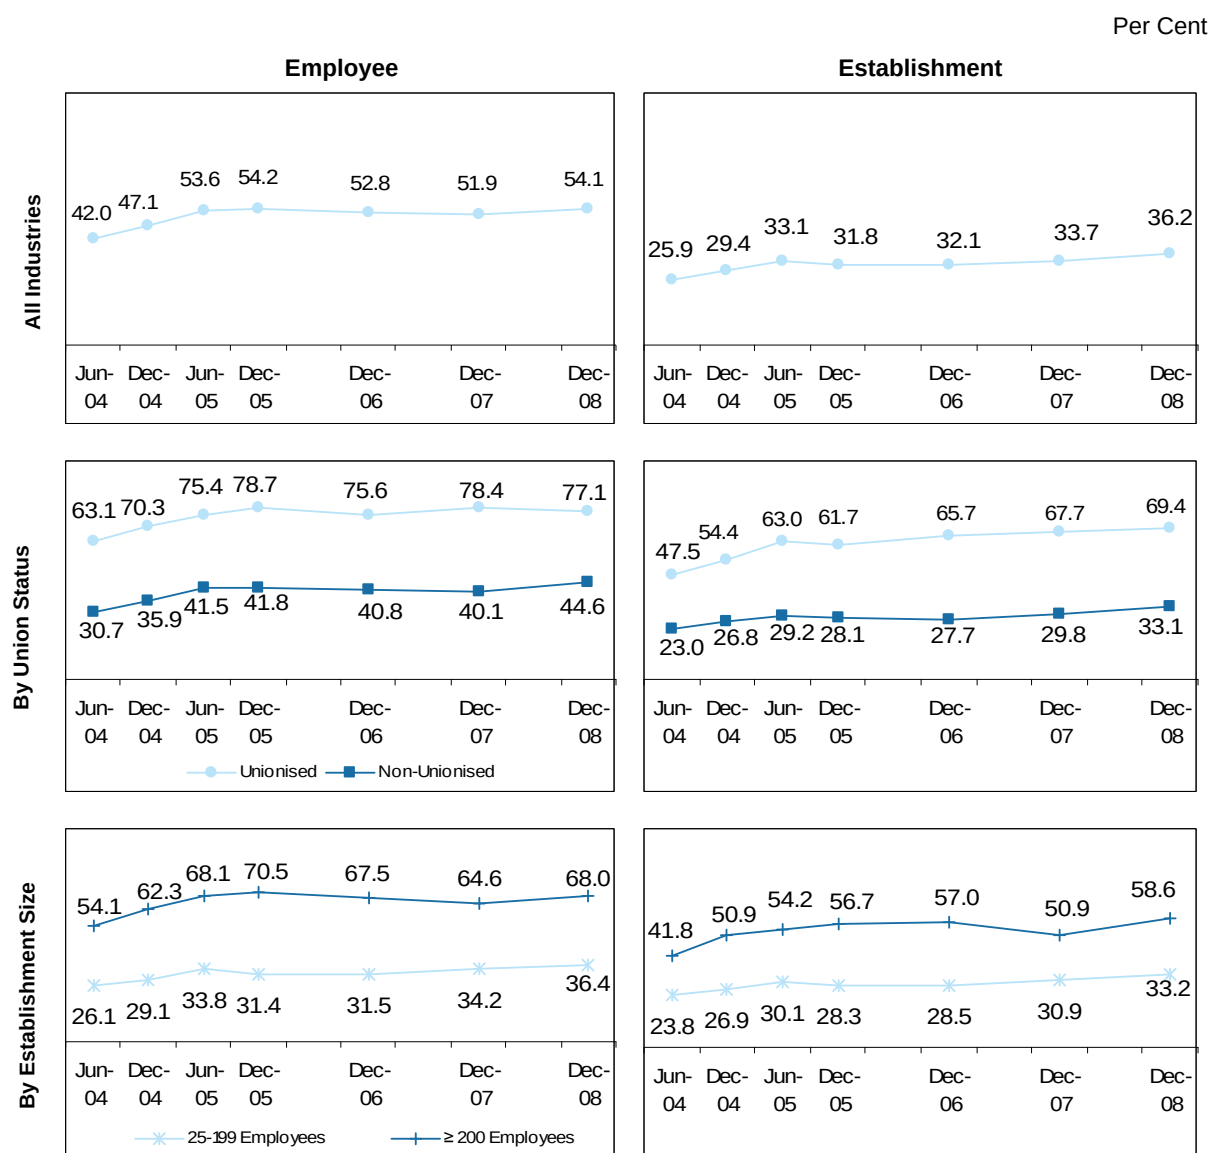

Variable Bonus linked to KPI

More establishments across firm size and union status had variable bonus linked to their KPI

As at December 2008, close to two in five establishments (36%) had formulated and communicated to their employees the KPI for the payment of variable bonus, up from 34% in 2007. The adoption of this wage recommendation was more prevalent in large (59%) and unionised establishments (69%). By employee count, slightly over one in two employees (54%) were in establishments that had variable bonus linked to KPI, up from 52% in 2007 (Chart 19).

Information & communications (79%), *financial services* (76%), *wholesale & retail* (66%) and *transport & storage* (62%) had among the highest share of employees with variable bonus linked to KPI while *construction* had the least at 26% (Table A4 in Appendix 1).

Chart 19 : Distribution of Employees and Establishments with Formulated KPI and Communicated the KPI for Payment of the Variable Bonus, 2004 - 2008

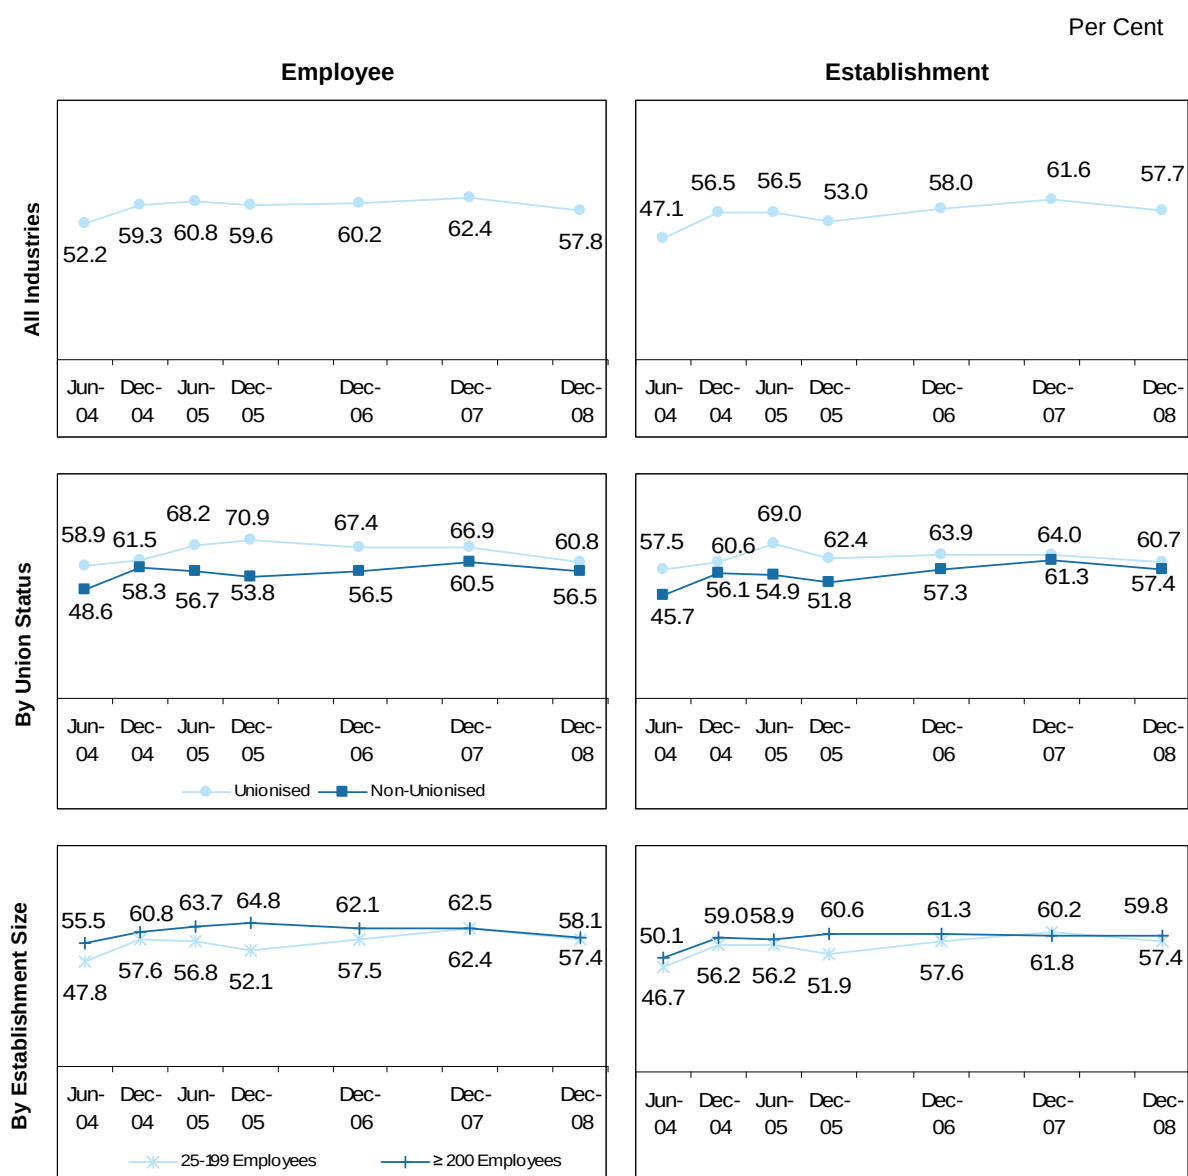

Maximum-Minimum Ratio

More than half of the private workforce was working in firms that had narrowed/were narrowing their maximum-minimum wage ratio to 1.5 or less

The tripartite partners recommended narrowing the maximum-minimum salary ratio of employees to 1.5 or less so that workers' wages are linked more closely to their job value. In December 2008, 58% of establishments had narrowed/were narrowing the wage ratio for the same job to 1.5 or less, down from 62% in December 2007. These establishments employed 58% of the private sector workforce, also down from 62% in 2007. The adoption of this recommendation declined across all firm size and union status in 2008

(Chart 20). This probably reflects the churn in firms as new companies were formed in 2008¹².

Chart 20 : Proportion of Employees and Establishments That Had Narrowed or Were Narrowing the Maximum- Minimum Salary Ratio to 1.5 or Less, 2004 - 2008

Overall establishments had a salary range of 1.58 for their RAF workers, higher than the 1.55 recorded a year ago (Table 14). The spread was wider in unionised (1.63) and large establishments (1.62) compared to non-unionised (1.57) and smaller establishments (1.54). Expectedly, the maximum-minimum salary ratio was lower in establishments that were narrowing or had narrowed the salary range at 1.43 in 2008, same as in 2007.

¹² 25,328 companies were formed in 2008, representing 12% of total companies registered. (Source: Department of Statistics, MTI and Accounting & Corporate Regulatory Authority). Generally, new companies are less likely to adopt the key wage recommendations as against existing companies.

**Table 14 : Average Maximum-Minimum Salary Ratio of the Rank-and-File,
2004 - 2008**

Max-min Ratio	Period	Rank-and-File					
		All Establishments		Unionised Establishments		Non- unionised Establishments	
		Total	Had narrowed / were narrowing	Total	Had narrowed / were narrowing	Total	Had narrowed / were narrowing
All Industries	Dec-08	1.58	1.43	1.63	1.56	1.57	1.37
	Dec-07	1.55	1.43	1.61	1.55	1.52	1.37
	Dec-06	1.54	1.45	1.62	1.56	1.50	1.37
	Dec-05	1.56	1.48	1.63	1.58	1.52	1.40
	Dec-04	1.59	1.47	1.66	1.60	1.56	1.41
By Establishment Size							
25-199 Employees	Dec-08	1.54	1.35	1.60	1.47	1.54	1.34
	Dec-07	1.50	1.34	1.61	1.48	1.49	1.33
	Dec-06	1.51	1.36	1.63	1.51	1.50	1.34
	Dec-05	1.52	1.38	1.63	1.55	1.51	1.36
	Dec-04	1.55	1.37	1.63	1.51	1.54	1.36
200 or More Employees	Dec-08	1.62	1.49	1.63	1.57	1.61	1.40
	Dec-07	1.58	1.49	1.62	1.56	1.56	1.42
	Dec-06	1.57	1.50	1.62	1.57	1.51	1.41
	Dec-05	1.58	1.53	1.63	1.58	1.53	1.46
	Dec-04	1.63	1.55	1.66	1.61	1.59	1.49

The junior management had a higher maximum-minimum ratio of 1.70 than 1.58 for RAF. This was the case, regardless of union status and employment size of the establishments (Table 15). Similarly, the maximum-minimum salary ratio for junior management was lower in establishments that were narrowing or had narrowed the salary range at 1.51 in 2008, down from 1.54 in 2007.

Table 15 : Average Maximum-Minimum Salary Ratio of Junior Management, 2004 - 2008

	Dec-04	1.73	1.65	1.78	1.69	1.68	1.60

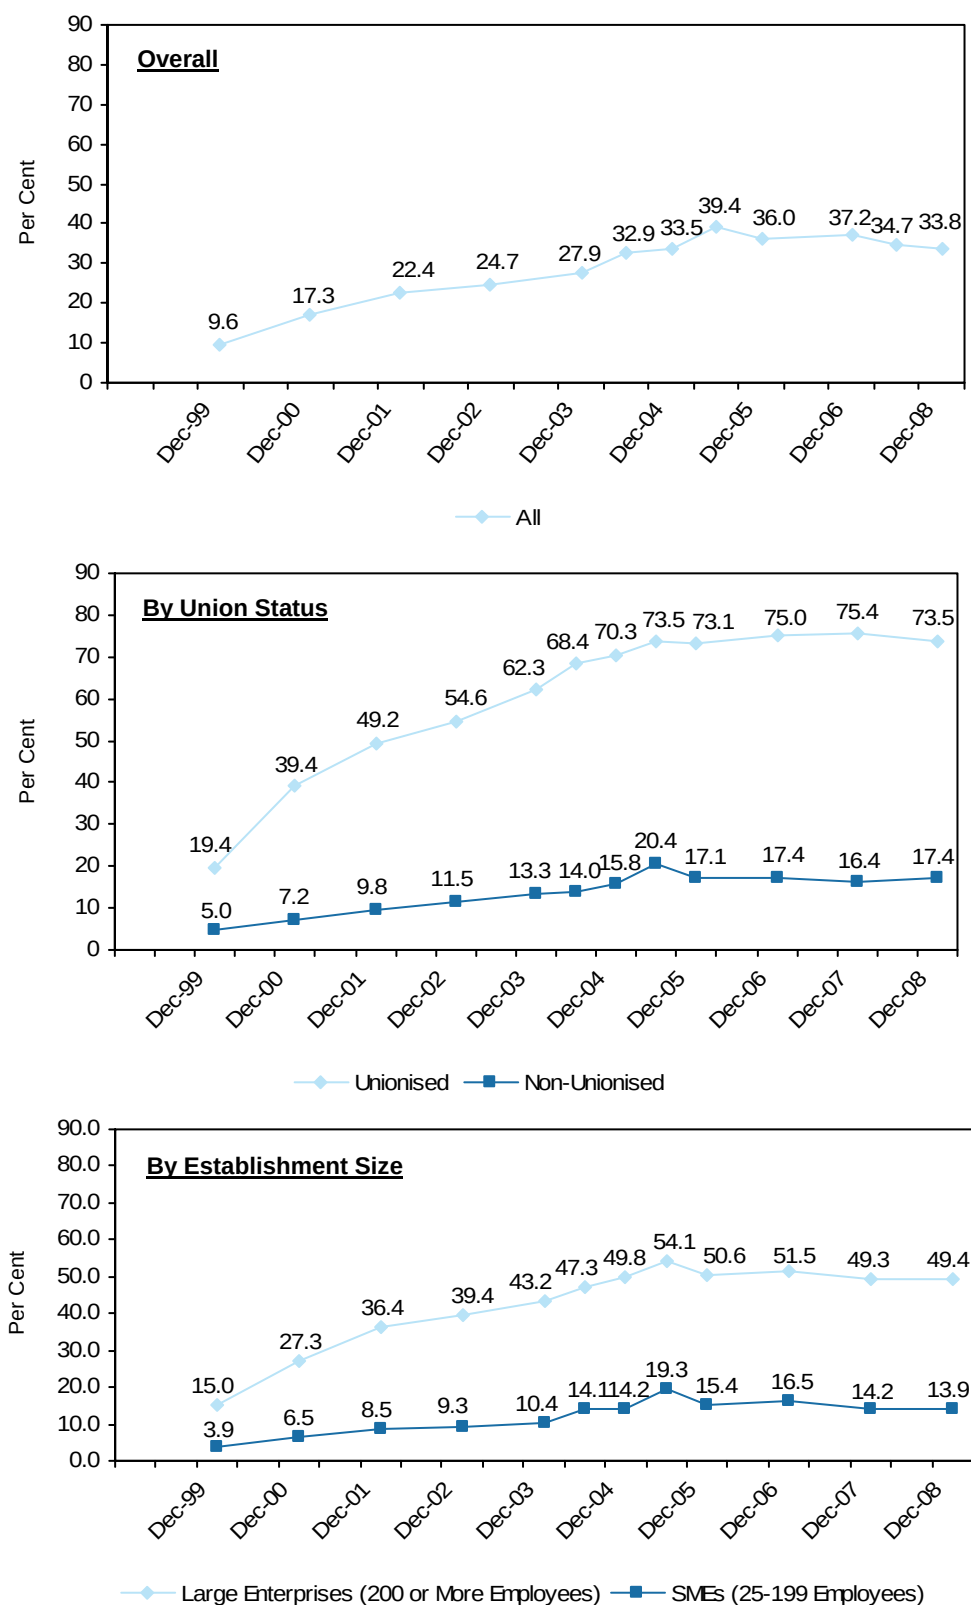

Monthly Variable Component

About one-third of the private workforce had MVC in their wage structure

As at December 2008, 34% of employees were working in establishments that had adopted the MVC, comparable to the 35% recorded a year ago. Nearly one in two (49%) employees in large establishments had MVC in their wage structure, compared with only 14% in the smaller establishments. The unionised sector far outperformed the non-unionised sector in adopting the MVC, with 74% of employees working in unionised establishments with MVC compared to only 17% of employees in non-unionised establishments with MVC ([Chart 21](#)).

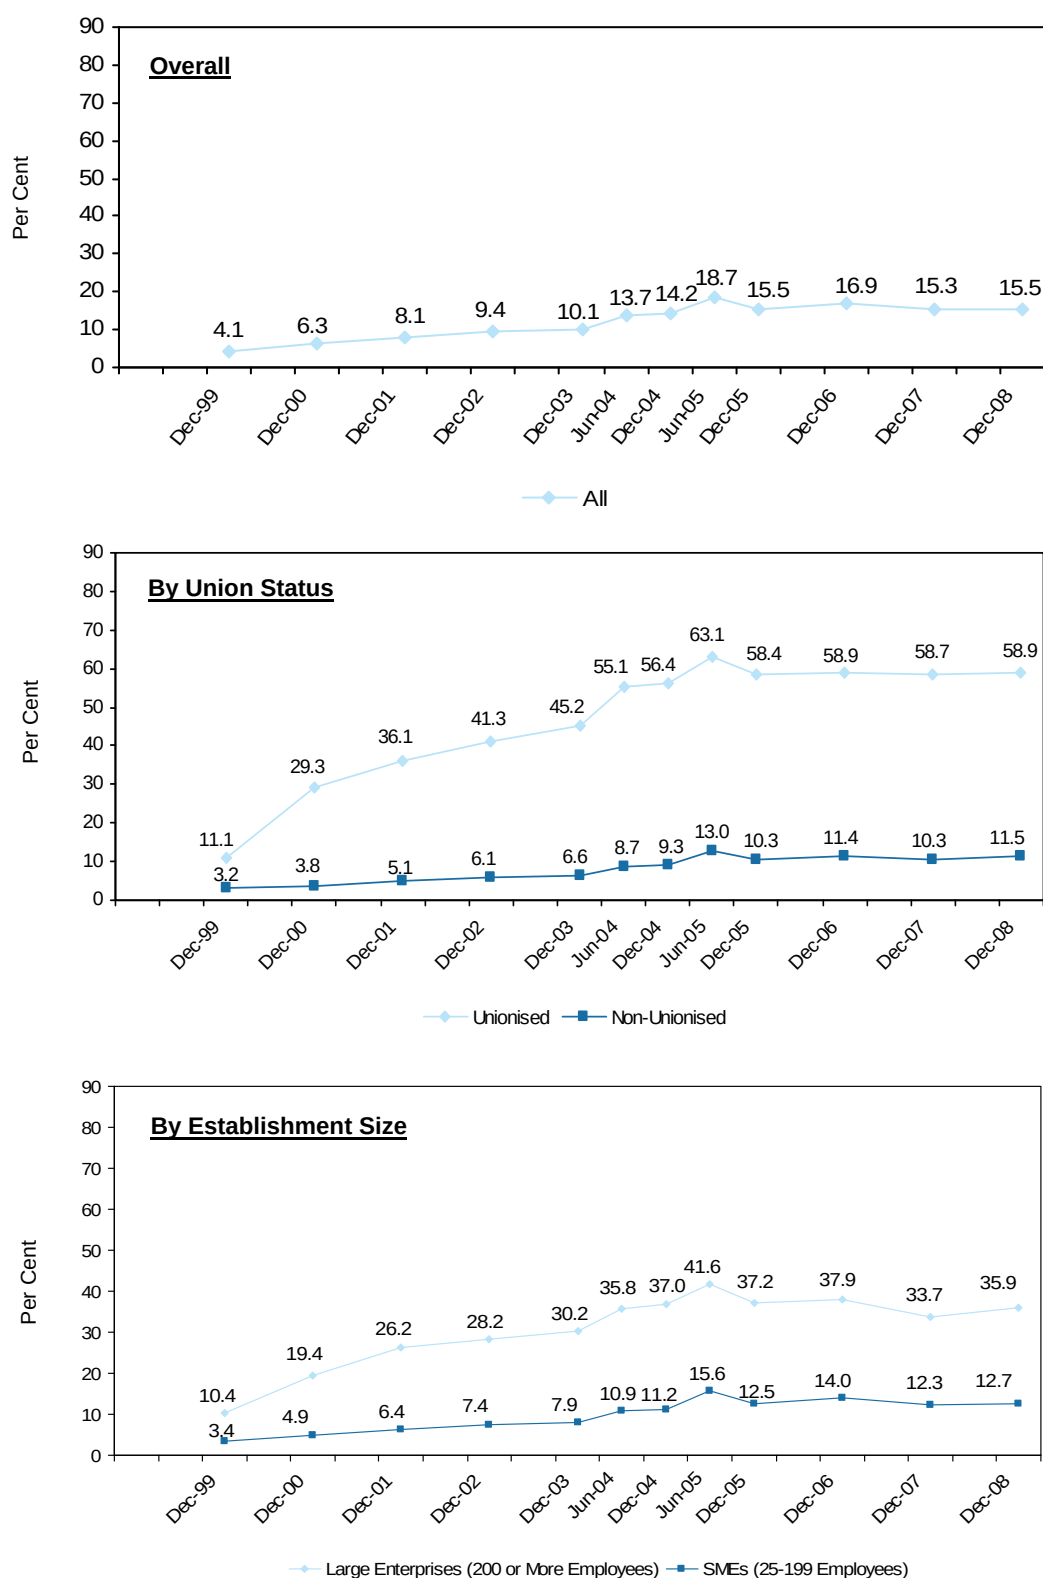

In terms of establishment count, 16% of establishments had implemented MVC, comparable to 15% in 2007. About six in ten (59%) unionised establishments had MVC, compared with only one in ten (12%) for non-unionised establishments ([Chart 22](#)).

Chart 21 : Proportion of Employees in Establishments With MVC by Union Status and Establishment Size, 1999 - 2008

Note : It is assumed that when an establishment introduces the MVC in its wage structure, it applies to all employees in the establishment. Data for 1999-2003 had been revised to pertain to employees in establishment with at least 25 workers to be comparable with data for 2004 onwards.

Chart 22 : Proportion of Establishments With MVC by Union Status and Establishment Size, 1999 - 2008

Note : Data for 1999-2003 had been revised to pertain to establishments with at least 25 workers to be comparable with data for 2004 onwards.

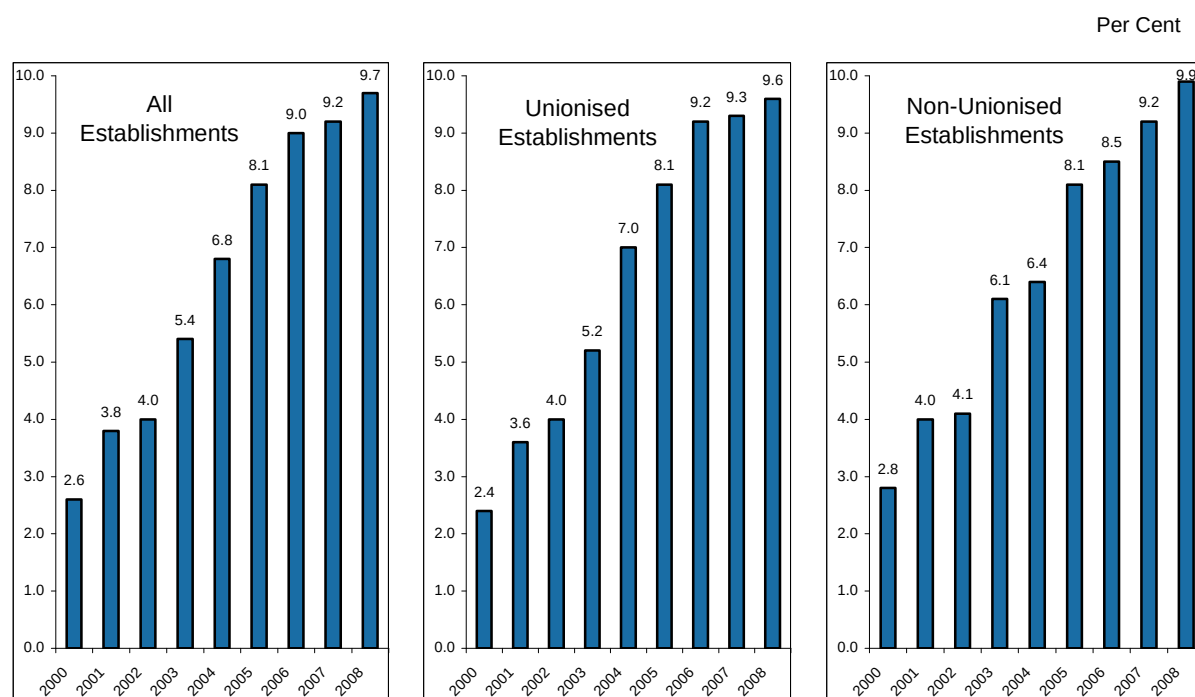

By industry, *community, social & personal services* (65%), *financial services* (59%) and *transport & storage* (51%) had among the highest share of employees with MVC while *construction* had the least (12%) (Table A5 in Appendix 1).

MVC as a Proportion of Monthly Basic Wage

MVC firms almost hitting the targets recommended by NWC

In 2008, establishments with MVC set aside 9.7% of monthly basic wages as MVC for the majority of their employees, up from 9.2% in 2007 and 2.6% in 2000 when data was first collected (Chart 23).

Chart 23 : MVC as a Proportion of Monthly Basic Wage in Establishments With MVC, 2000 - 2008

On average, establishments with MVC paid higher-than-average annual variable component (3.22 months of basic wages in 2008). Combining the annual variable component and MVC (21.2% and 7.6% of total wages respectively), 29% of the total wages were variable in MVC-firms. This almost hit the target of 30% comprising 20% in annual variable component and 10% in MVC, recommended by the tripartite partners. However, taking into consideration non-MVC firms, the variable share of total wages amongst all private sector establishments with at least 25 employees was only 20%, comprising an annual variable component of 17% and MVC of only 3.2% in 2008.

Triggers for MVC Cuts/Restoration

Companies are recommended to put in place clear and appropriate triggers for MVC cuts and restoration to enable them to respond nimbly to business conditions without having to negotiate with workers or unions at every point of a business downturn. As at December 2008, nearly six out of every ten (59%) employees in MVC firms had indicators/guidelines in their wage structure for the cut and restoration of MVC, broadly similar to 58% the year before.

Table 16 : Distribution of Employees With MVC by With/Without Indicators/Guidelines for the Cut & Restoration of the MVC, 2005 - 2008

Per Cent			
Employee	Period	Yes	No

	Dec-07	58.6	41.4
	Dec-06	59.8	40.2
	Dec-05	60.0	40.0

Note : Figures may not sum up to 100% due to rounding.

Six in ten firms had no intention of implementing MVC

As at December 2008, 16% of establishments had implemented MVC while 0.9% had decided to or were in the process of implementation ([Table 17](#)). Another 10% were still assessing the system. Six in ten (60%) establishments had no intention of implementing, comprising 49% which had concerns over MVC and the remaining 10% indicating that

their wage structure was already flexible. Another 14% were unaware of the MVC, down by 1%-point over the year.

Table 17 : Distribution of Establishments and Employees in Establishments by Intention to Implement MVC, 2007 and 2008

Establishment

Per Cent

Union Status	Period	Total	With MVC	Decided/ in the Process of Implementation	Still Under Consideration	No Wish to Implement		Not Aware of MVC

Non-Unionised Establishments	96.4	39.6	35.7	14.0	7.1

Note : Figures may not sum up due to rounding.

The most common reason for not having MVC is that the practice was not an industry norm

The top three common reasons cited by establishments that were aware of MVC but ruled out the possibility of adopting it were that MVC was not widely adopted in their industry (26%), that their wage systems was already flexible (17%) and it was not in line with their HQ's wage structure (15%). The 17% that cited that their wage systems was already flexible included 9.2% indicating they were able to cut basic wages without introducing MVC and 7.9% who felt that their wage structure was already flexible (e.g. sizeable component of the wage is commission based). Other concerns raised were that MVC would make the wage structure too complex (14%), employees might not be receptive to MVC (13%), the implementation and monitoring work would be administratively burdensome (6.6%) and working out implementation guidelines (e.g. under what circumstances employers can cut MVC) would be difficult (6.5%).

Table 19 : Distribution of Establishments Which Were Aware of MVC but Did Not Wish to Implement It by Main Reason and Union Status, 2007 and 2008

Per Cent

Main Reason for Not Introducing MVC	All Firms		Unionised Establishments		Non-Unionised Establishments	
	Dec-07	Dec-08	Dec-07	Dec-08	Dec-07	Dec-08
Total	100.0	100.0	100.0	100.0	100.0	100.0
Establishments in my industry have not implemented MVC in their wage structure	22.4	26.4	15.0	22.2	22.7	26.6

Others	1.2	0.9	2.2	1.9	1.2	0.8

Note : Figures may not sum up to 100% due to rounding.

Wage Cuts in Response to Business Downturn

Only a minority of establishments with MVC implemented a cut in MVC in 2008

Given that the economic conditions deteriorated sharply only in the last quarter of the year, only a minority (1.7%) of private establishments with MVC in their wage structure implemented a cut in MVC in 2008 to reduce business costs arising from the adverse business conditions. They employed only 0.6% of employees with MVC in their wage structure or 0.2% of all employees in the private sector. The average quantum of MVC cut was 8.1%-point. While proportionately fewer SMEs and non-unionised establishments have adopted MVC, more of them cut MVC in 2008 and by a deeper quantum than the larger and unionised sector ([Table 20](#)).

Table 20 : Distribution of Establishments and Employees in Establishments With MVC That Cut MVC in 2008 and Quantum of Cut, Dec 2008

Per Cent			
Establishment	Establishment Count	Employee Count	Average Quantum of MVC Cut in %-Point
All Industries	1.7	0.6	8.1
<i>By Establishment Size</i>			
25-199 Employees	2.1	1.5	11.0
200 or More Employees	0.9	0.4	5.9
<i>By Union Status</i>			
Unionised Establishments	0.4	0.2	2.5
Non-Unionised Establishments	2.4	1.3	8.9

Note : Based on establishments and employees with MVC in their wage structure.

A significant proportion of private establishments foresee a need to cut wages if business conditions worsen in 2009

Two in five establishments (40%) employing 44% of the private workforce reported that they foresee a need to cut wages in 2009, if business conditions worsen. Another 32% of establishments employing 29% of the workforce had not thought about this issue. Only a minority or 28% of establishments employing 26% of the workforce did not foresee a need to cut wages ([Table 21](#)).

Table 21 : Distribution of Establishments and Employees in Establishments by Whether Forsee a Need to Cut Wages in 2009 if Business Worsens, Dec 2008

<u>Establishment</u>				
Per Cent

200 or More Employees	100.0	47.8	24.5	27.7
By Union Status				
Unionised Establishments	100.0	51.9	20.3	27.9
Non-Unionised Establishments	100.0	41.4	28.8	29.8

Note : Figures may not sum up to 100% due to rounding.

Cutting variable bonus was the most common measure of wage cuts

The top two common measures of wage cut are cutting the annual variable component (74%) and basic wage (47%). Weighed down by firms without MVC in the wage structure, only 15% of establishments that foresee a need to reduce wages in 2009 will cut MVC. Nevertheless, the majority of the firms with MVC intend to cut annual variable bonus (76%) and/or MVC (69%) when reducing wages ([Table 22](#)).

Table 22 : Distribution of Establishments and Employees in Establishments That Foresee a Need to Cut Wages in 2009 by Type of Wage Cut, Dec 2008

Establishment

Per Cent

Establishment	All Firms			Firms With MVC			Firms Without MVC	
	Cut Annual Variable Component	Cut Basic Wage	Cut MVC	Cut Annual Variable Component	Cut Basic Wage	Cut MVC	Cut Annual Variable Component	Cut Basic Wage

200 or More Employees	80.5	21.6	30.4	76.4	6.5	53.6	85.9	41.3
By Union Status								
Unionised Establishments	78.2	10.5	40.2	76.5	5.5	50.5	85.0	30.1
Non-Unionised Establishments	77.5	42.7	15.4	76.3	14.1	68.4	77.8	51.1

Notes : (1) Based on establishments that foresee a need to cut wages in 2009 and whether they have MVC in their wage structure.

(2) Figures may not sum up to 100% as establishments can implement more than one measure of wage cut.

(3) Annual variable component comprises variable bonuses and annual wage supplement.

Firms with MVC in their wage structure more confident of gaining their employees' acceptance of a wage cut

Proportionately fewer establishments with MVC in their wage structure expected difficulty in gaining their employees' acceptance of a wage cut, if it has to be implemented in 2009 compared with firms without MVC ([Table 23](#)). This was so regardless of union status and establishment size.

Table 23 : Distribution of Establishments and Employees in Establishments by Whether They Expect Difficulty in Gaining Employees' Acceptance of a Wage Cut if It Has to be Implemented in 2009, Dec 2008

Establishment

Per Cent

Implementation of Performance Management System¹³

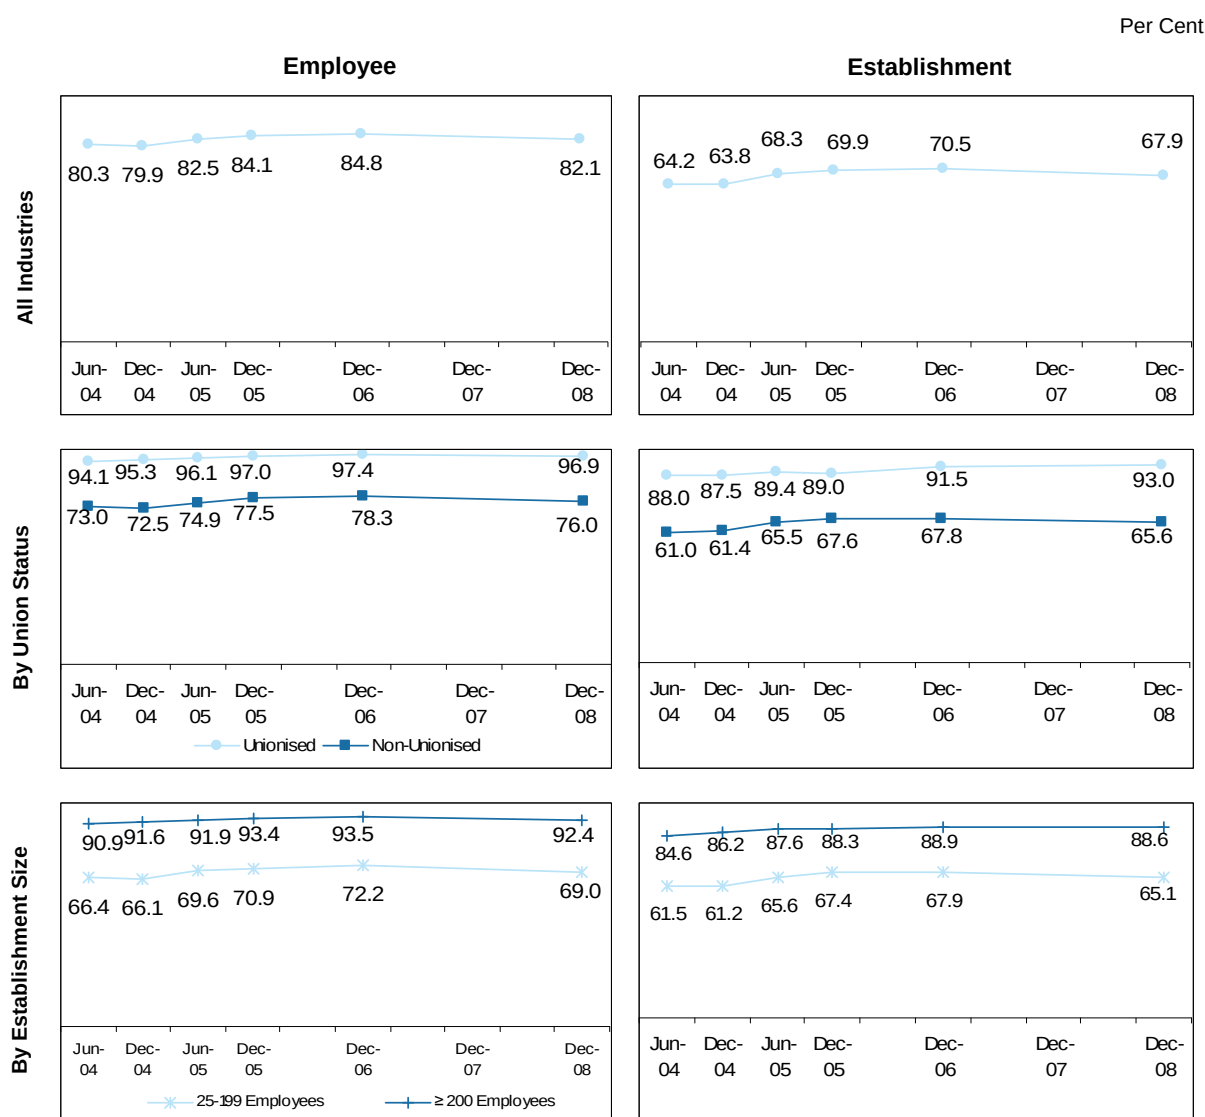

Large and unionised firms led in the implementation of PMS since they were more likely to have the resources

Most establishments have some form of performance management system (PMS) that links individual employee's performance to rewards. As at December 2008, about four in five employees (82%) were working in establishments that have some form of PMS ([Chart 24](#)). Expectedly, the percentage was higher for employees from large (92%) and

¹³ Data on implementation of performance management system will only be collected on alternate year, starting from Dec 06.

unionised (97%) establishments as they were likely to have the resources to implement PMS than the smaller (69%) and non-unionised (76%) establishments. The figures dipped marginally from December 2006, but were higher than in June 2004 when the data were first collected.

Chart 24 : Distribution of Establishments and Employees in Establishments With Performance Management System, 2004 - 2008

Note : Data are only collected on alternate year, starting from Dec 06.

A PMS can either be formal or informal/unstructured. The majority of establishments with PMS reported having a formal appraisal system, covering 68% of the private sector workforce (comprising 58% with formal appraisal system only and 11% with both formal and informal appraisal system). Expectedly, employees in the larger (85%) and unionised establishments (94%) were more likely to have a formal appraisal system (Table 24).

Table 24 : Distribution of Establishments and Employees in Establishments With Performance Management System by Type of Appraisal Systems, Dec 2008

Establishment

Per Cent

Establishment	With PMS			
	Total	With Formal Appraisal System	With an Informal/Unstructured PMS	With Both
All Industries	67.9	35.1	22.1	10.7

Note : Figures may not sum up due to rounding.

Information Sharing

Unionised sector outperformed non-unionised in information sharing

Nearly all unionised establishments (93%) shared information with their employees compared with three in every five (61%) non-unionised establishments ([Chart 25](#)). Overall, about three in four (77%) employees were working in establishments that shared information in 2008, higher than 76% in 2007, helped by the rise in share for employees in non-unionised establishments (from 66% to 69%) while employees covered in the unionised sector remained high (97% in both 2007 and 2008).

Chart 25 : Proportion of Establishments and Employees That Share Information With Employees by Union Status, 1999 - 2008

Information sharing more prevalent among firms with a flexible wage system

As expected, information sharing was more prevalent among firms with a flexible wage system. About two in every three (68%) establishments with at least one wage recommendation shared information with their employees compared with only about one in two (50%) of establishments without any wage recommendations.

Table 25 : Proportion of Establishments and Employees in Establishments That Shared Information With Employees by Union Status and Type of Wage System, Dec 2008

Per Cent

Union Status	All Establishments		With at Least One Wage Recommendation		No Wage Recommendation	
	Establishment Count	Employee Count	Establishment Count	Employee Count	Establishment Count	Employee Count
All Establishments	63.5	76.9	67.8	81.2	50.0	55.2
By Union Status						
Unionised Establishments	93.3	96.8	94.8	97.0	75.4	90.7
Non-Unionised Establishments	60.7	68.7	64.7	73.2	49.4	52.5

In 2008, 56% of unionised establishments shared information with their employees at least annually compared with 31% for non-unionised establishments (Table 26). The proportion of establishments that shared information on a regular basis declined over the year (from 37% to 33%), weighed down by the drop in the non-unionised sector (from 35% to 31%) (Chart 26). In terms of employees covered, 46% of employees were working in establishments that shared information at least annually, down slightly from 48% in 2007.

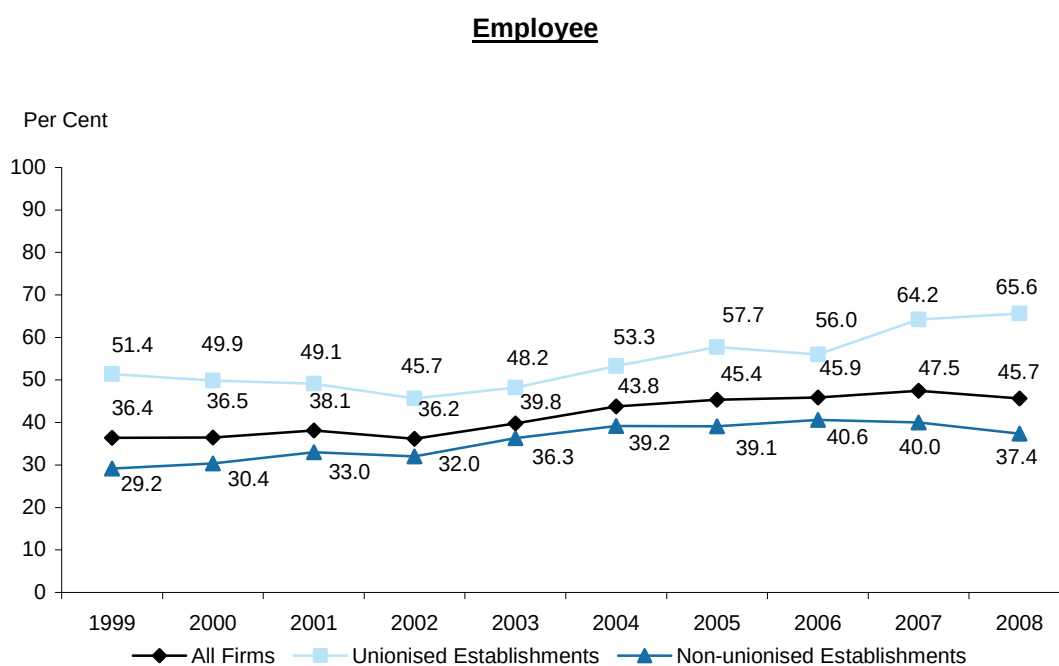

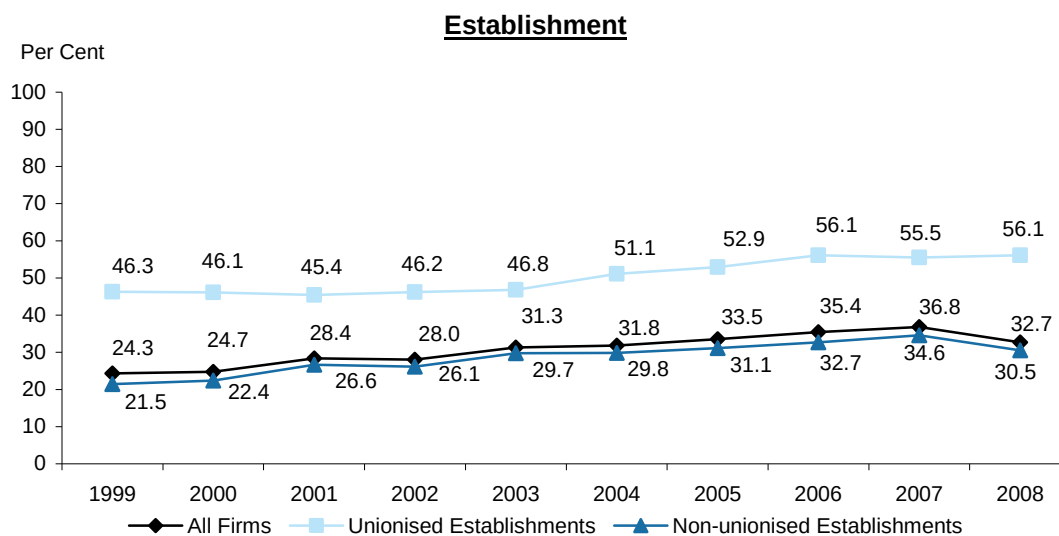

Table 26 : Distribution of Establishments and Employees by Frequency of Information Sharing and Union Status, Dec 2008

Per Cent

Frequency	All Establishments		Unionised Establishments		Non-Unionised Establishments

Note : Figures may not sum up due to rounding.

Chart 26 : Proportion of Establishments and Employees That Shared Information at Least Annually by Union Status, 1999 - 2008

In view of the sharp economic downturn in the later part of 2008 and increase in overall business costs, employers were more restrained in granting wage increase in 2008. Total wage gains moderated for all three categories of employees. In real terms, wages declined in 2008 as prices rose more quickly. Nevertheless, real wages outpaced productivity growth for the fourth straight year as the decline in labour productivity deepened, arising from slower GDP growth and strong employment gains in the first half of 2008. As the economic recession only started to hit Singapore in late 2008, the full impact on wages is likely to be felt only in 2009.

Wage restructuring appears to have reached saturation. A large majority of employees are already working in companies which have adopted some form of flexible wages. Overall, there was a slight increase in employees working in companies which linked their variable bonus to KPI in 2008 compared to 2007, while the proportion with MVC in their wage structure slipped marginally. The narrowing of the maximum-minimum salary ratio declined in 2008, amid the churn in firms.

Given that the economic conditions deteriorated sharply only from the last quarter of 2008, only a small minority of private establishments with MVC in their wage structure cut the component in 2008. Nevertheless, a significant proportion of establishments indicated a need to cut wages including MVC in 2009, if business conditions worsen. Establishments with MVC were more confident of gaining their employees' acceptance of a wage cut, if it has to be implemented in 2009 compared with firms without MVC.

HIGHLIGHTS

ON OCCUPATIONAL WAGES, 2008

- Occupations requiring higher skills and knowledge continued to command higher wages. In June 2008, the median monthly gross wages was the highest for managers (\$6,400), followed by professionals (\$4,405) and associate professionals & technicians (\$3,000). Clerical (\$1,960) and sales & service workers (\$1,849) were paid close to \$2,000. Among blue-collar occupations, the production craftsmen (\$2,137) and plant & machine operators (\$2,009) were paid much more than the group of cleaners, labourers & related workers (\$975).
- Wages are generally observed to rise with age as workers gain experience and become more productive over the years. The pace of wage increase with age is more pronounced among managerial and professional groups as their work is generally more knowledge intensive. This was especially true among professionals where wages rose with advancing age groups, peaking for those aged 60-64 in 2008. In lower-skilled and blue-collar occupations, wages generally rose more gradually and peaked earlier for those in the late thirties or early forties.
- Over the past decade, wages of all occupational groups generally trended up, except for the group of cleaners, labourers & related workers. With rising wages among higher-skilled occupational groups and stagnating wages among the lower-end cleaners, labourers & related workers, the wage gap relative to the lowest paid group widened in 2008 from a decade ago.
- Similar to the experience in other countries, females generally earn less than males. The gender wage gap was small among associate professionals & technicians (3.1%), professionals (5.9%), managers (6.5%) and clerical workers (7.0%) where women were paid close to that of men for those aged 35 - 39. In blue-collar occupations, the wage gap was wider, with women earning only about 60% that of men for the group of plant & machine operators. This could reflect the different jobs that males and females hold within the occupational group. The gender wage differential could also reflect the tendency for women to take career breaks for family reasons which reduce the work experience and hence, pay relative to men.

SURVEY FINDINGS ON OCCUPATIONAL WAGES, 2008

1 INTRODUCTION

This report seeks to answer commonly asked questions concerning wages of various occupations in Singapore. It examines wages of different occupations within the same industries as well as similar occupations across different industries, the effects of age and gender on occupational wages, and the changes in wages over time. As the occupational wage data are based on aggregates of similar jobs, it can only serve as a guide for expected wages of individuals, given that no workers and jobs are totally alike¹ and wages are determined by prevailing market conditions.

The wage data are obtained from the Occupational Wage Survey, 2008 on a representative sample of private sector establishments each with at least 25 employees conducted by the Central Provident Fund (CPF) Board on behalf of the Ministry of Manpower. The wages captured refer to basic and gross monthly wages (excluding bonuses and profit sharing) of full-time private sector employees who contributed to CPF in the month of June 2008. With a response rate of 89.5%, the survey covered an effective sample of 3,099 private sector establishments employing some 238,550 CPF contributors on a full-time basis. The survey concepts and methodology are explained in the Annex.

2 MONTHLY BASIC AND GROSS WAGES

Managers continued to command the highest median gross wages of \$6,400 in June 2008, pulled up mainly by occupations such as managing directors (\$15,000) and general managers (\$12,500). Professionals came in at a distant second at \$4,405, weighed down by the entry of fresh graduates and the downward bias created by professionals who are promoted to managerial positions and hence no longer classified as “professionals”. The third highest paid was the group of associate professionals & technicians at \$3,000, consisting mainly of occupations which earned around the median, such as management executives (\$3,000), aeronautical engineering technicians (\$2,963) and sales & marketing executives (\$2,950). Clerical (\$1,960) and sales & service workers (\$1,849) were paid close to \$2,000. While office clerks (\$1,800) formed the majority among the clerical workers, sales & service workers ranged from the higher-paid chief/executive cooks

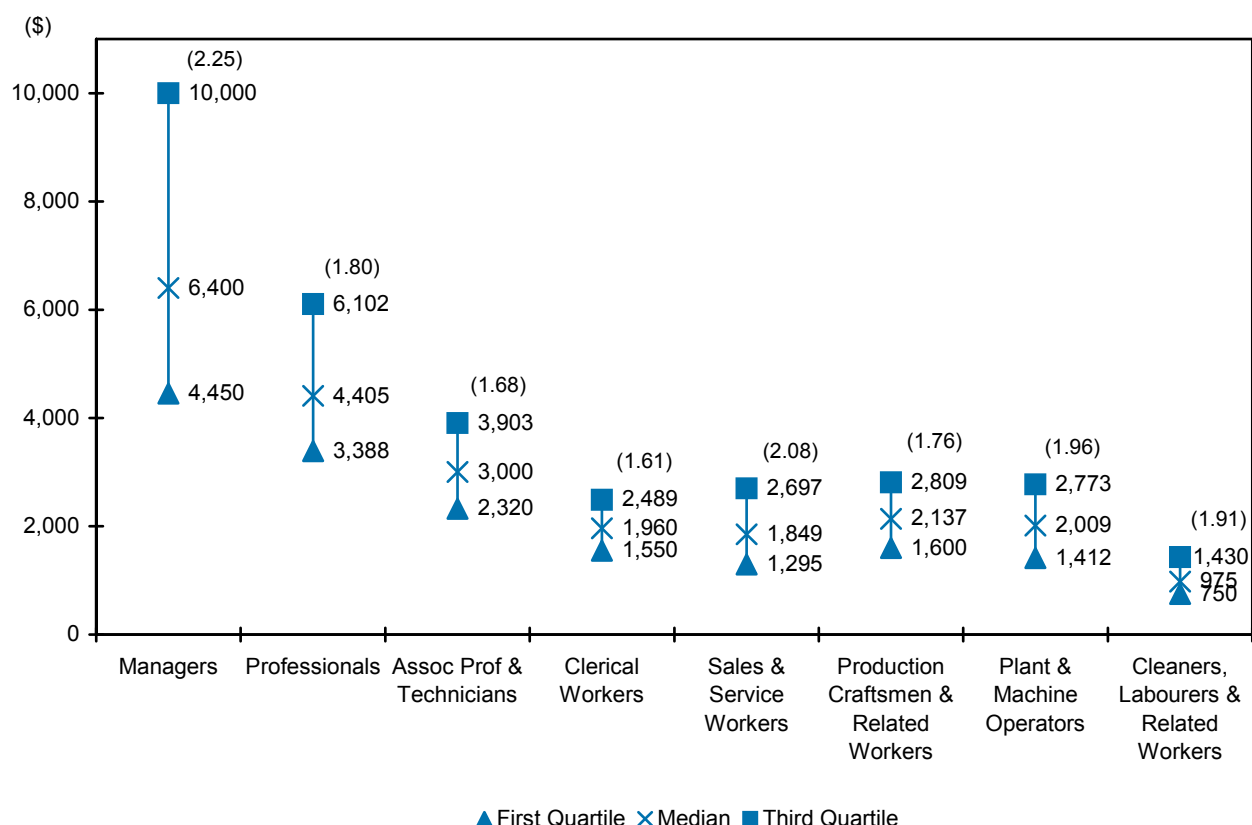

¹ For example, some jobs have better working conditions and fringe benefits than others and not all workers have the same skills, productivity and innate ability.

(\$4,500) to the lower-paid shop sales assistants (\$1,630) and private security guards (\$1,379).

Among blue-collar occupations, the production craftsmen (\$2,137) and plant & machine operators (\$2,009) were paid much higher than the group of cleaners, labourers & related workers (\$975) ([Chart 1](#)). The top and bottom 5 occupations ranked by the median gross wage for each occupational group are listed in [Appendix 1](#).

Besides median wage, one can also look at the range of wages paid to the middle 50% of workers in the occupational group - these are the wages bounded by the 25th and 75th percentile. The middle range of gross wages among managers was \$4,450 to \$10,000 as compared to \$750 to \$1,430 for cleaners & related workers in June 2008. Not surprisingly, the managerial group had the highest spread in terms of ratio at 2.25, reflecting the wide diversity of occupations, ranging from restaurant managers to general managers. They were followed by sales & service workers with a ratio of 2.08. On the other hand, the clerical workers and associate professionals & technicians had the narrowest ratios of 1.61 and 1.68 respectively.

Chart 1 : Monthly Gross Wage by Occupational Group, June 2008

Note : Figures in parentheses refer to the ratio of the third to first quartile wages.

Expectedly, in occupations where the remuneration typically included payment of commissions, allowances (e.g. shift, food, and transport) and overtime, there was a significant gap between gross and basic wages. Thus, among sales & service and blue-collar occupational groups, gross wages were about 15 to 40% higher than basic wages ([Table 1](#)). On the other hand, there was little difference between the basic and gross wages among managers and professionals as their variable pay usually takes the form of performance bonuses, profit sharing and stock options which are not captured in this survey.

Table 1 : Median Monthly Gross and Basic Wages by Occupational Group, June 2008

Occupational Group	No. Covered	Median (\$)		Gross Wage as Ratio of Basic Wage
		Gross Wage	Basic Wage	
Managers	38,896	6,400	6,100	1.05
Professionals	36,862	4,405	4,160	1.06
Associate Professionals & Technicians	61,106	3,000	2,650	1.13
Clerical Workers	33,643	1,960	1,777	1.10
Sales & Service Workers	24,517	1,849	1,350	1.37
Production Craftsmen	9,602	2,137	1,700	1.26
Plant & Machine Operators	15,539	2,009	1,485	1.35
Cleaners, Labourers & Related Workers	18,246	975	830	1.17

High- and Low-Paying Occupations

Not surprisingly, many of the occupations with median monthly gross wage in the top 10% were from the managerial, professional, and associate professional & technician groups. Top-paying occupations included specialised surgeons (\$24,300), managing directors (\$15,000), general managers (\$12,500) and personal bankers (\$11,713).

Occupations in the bottom 10% were paid a median gross wage ranging from around \$500 to \$1,400. The better-paying occupations within this group were garment pattern makers (\$1,361), building painters (\$1,341), machine operators (around \$1,325), cleaner supervisors (\$1,330), hospital attendants (\$1,311) and office attendants (\$1,246). Cleaners, labourers & related workers were paid significantly lower at around \$800. Details are in [Appendix 2](#).

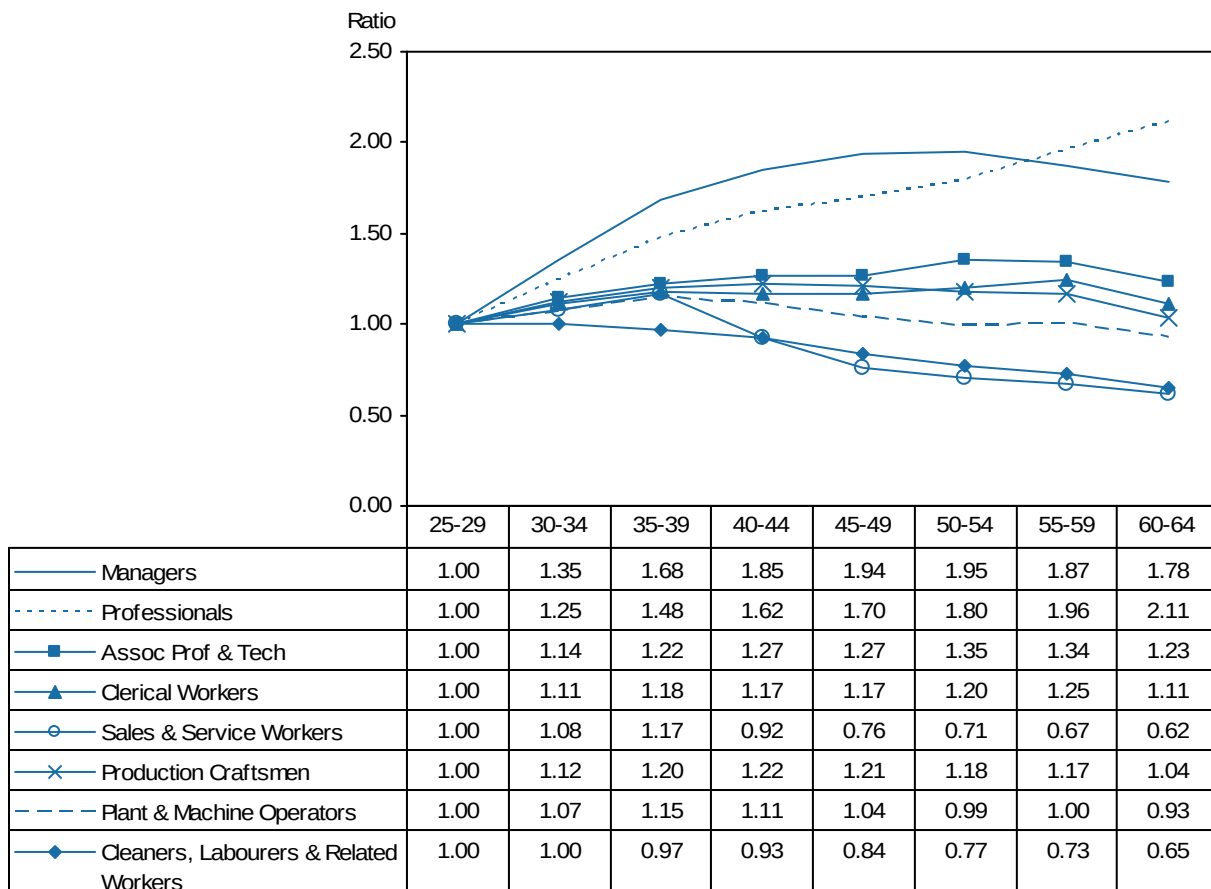

3

GROSS WAGE BY AGE

Wages are generally observed to rise with age as workers gain experience and become more productive over the years. This is reinforced by the seniority-based wage system in some companies. The pace of wage increase with age is more pronounced among the managerial and professional groups as their work is generally more knowledge intensive. This was especially true among professionals where wages rose with advancing age groups, peaking for those aged 60-64 in 2008. While the rise in wages was steeper for managers, they peaked earlier in the 50-54 age group ([Chart 2](#)).

In lower-skilled and blue-collar occupations, wages generally rose more gradually and peaked earlier for those in the late thirties or early forties. This was observed with sales & service workers, production craftsmen and plant & machine operators. The exception was the group of cleaners, labourers & related workers where wages were largely flat in the earlier age groups, before declining for those in their late thirties to around two thirds the pay of those in the younger age group of 25 – 29 for those aged 60 - 64.

Chart 2 : Ratio of Median Monthly Gross Wage Relative to Age Group 25 – 29 by Age and Occupational Group, June 2008

In order that wage trends are not affected by the compositional changes in the age profile of the workers, the analysis in this section will focus on workers in the same age group of 35 – 39 years. Generally, workers in this age group are near to or at the prime of their careers.

Over the past decade, wages of all occupational groups generally trended up, except for the group of cleaners, labourers & related workers. With rising wages among higher-skilled occupational groups and stagnating wages among the lower-end cleaners, labourers & related workers, the wage gap widened in 2008 from a decade ago ([Table 2](#)).

With higher wages to start with, the PMET group experienced wage gains averaging around 1.5% p.a. Comparatively, the wages of sales & service workers and plant & machine operators increased the most at around 3.5% p.a. This mainly reflected higher wage gains among electronic equipment/component assemblers (3.9% p.a.), mechanical products quality checkers and testers (4.2% p.a.) and shop sales assistants (3.1% p.a.). The group of cleaners, labourers & related workers suffered a negative wage change of -0.9% p.a. over the decade. This could reflect downward pressures on wages at the low end reflecting the impact of globalization and technological changes.

Chart 3 : Median Monthly Gross Wage of Workers Aged 35 – 39 Years by Occupational Group, 1998 - 2008 (June)

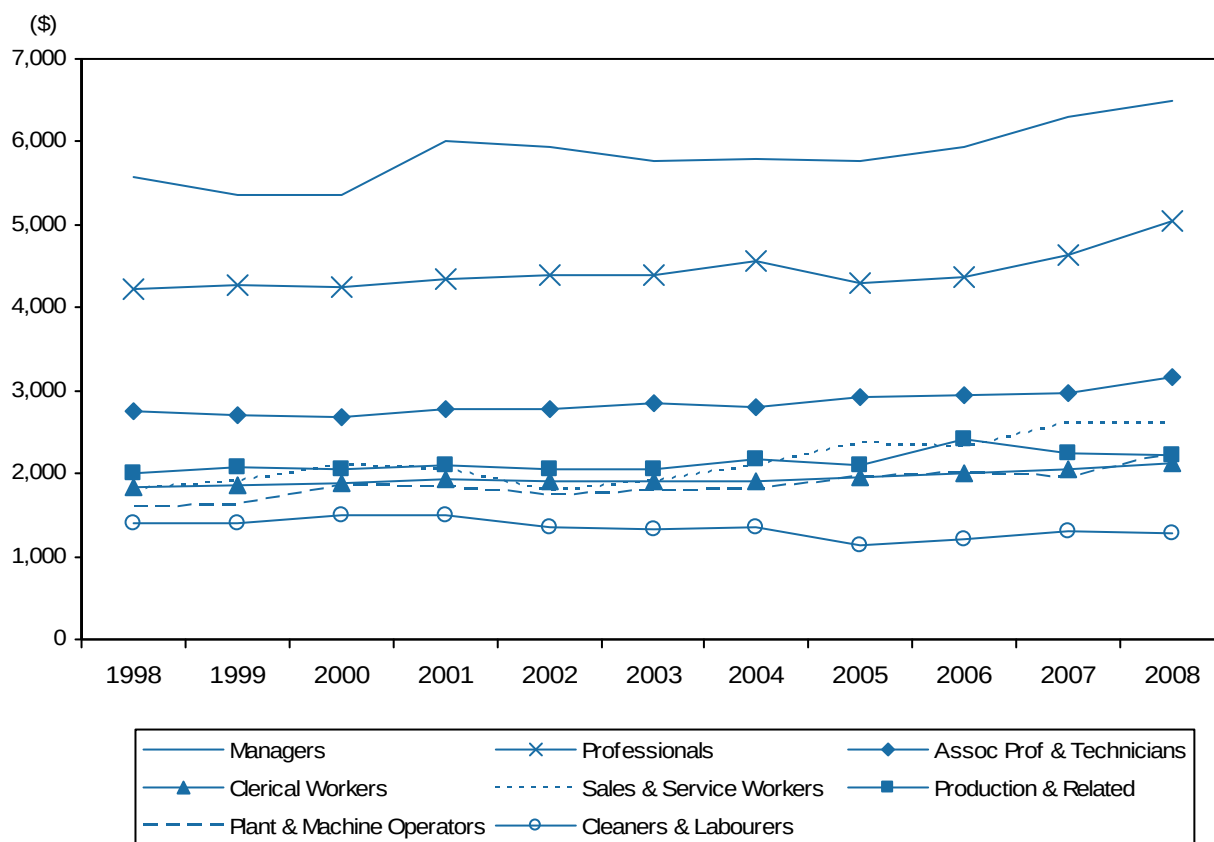

Table 2 : Median Monthly Gross Wage of Workers Aged 35 – 39 Years by Occupational Group, 1998 - 2008 (June)

Occupational Group	June 1998			June 2008			Annualised Wage Change, 1998-2008 (%)
	No. Covered	Wage (\$)	Ratio to Lowest Paid Group	No. Covered	Wage (\$)	Ratio to Lowest Paid Group	
Managers	6,063	5,567	4.01	8,302	6,500	5.12	1.6
Professionals	4,453	4,226	3.04	7,515	5,048	3.97	1.8
Associate Professionals & Technicians	8,563	2,750	1.98	10,353	3,170	2.50	1.4
Clerical Workers	6,809	1,831	1.32	4,673	2,128	1.68	1.5
Sales & Service Workers	2,205	1,817	1.31	2,850	2,600	2.05	3.6
Production Craftsmen	2,989	2,012	1.45	1,105	2,228	1.75	1.0
Plant & Machine Operators	5,628	1,599	1.15	1,959	2,249	1.77	3.5
Cleaners, Labourers & Related Workers	2,083	1,389	1.00	989	1,270	1.00	-0.9

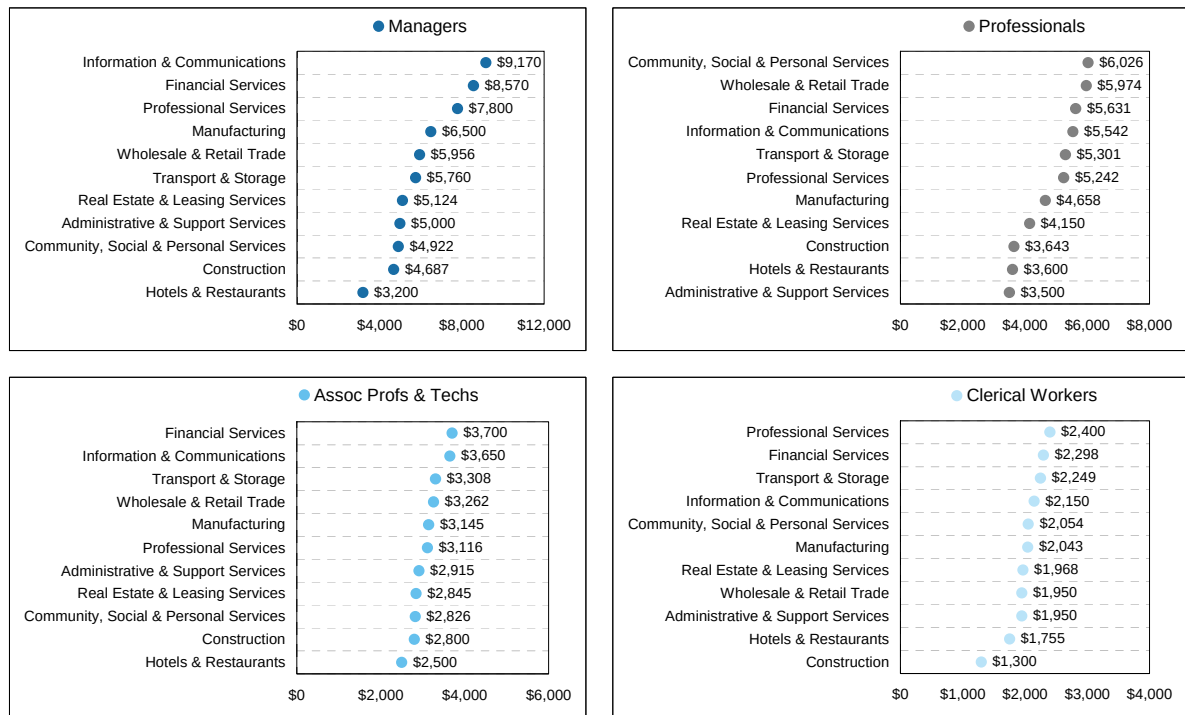

This section looks at the median gross wages of workers aged 35 – 39 across the industries in four occupational groups, namely managers, professionals, associate professionals & technicians and clerical workers. Comparison of wages in the other occupational groups across industries would not be meaningful as they are typically concentrated in one or two industries.

Managers aged 35 – 39 were paid the highest in information & communications in June 2008 with a median gross wage of \$9,170, followed closely by those in financial services at \$8,570 ([Chart 4](#)).

Community, social & personal services, wholesale & retail trade and financial services paid the most for mid-career professionals in June 2008. Some of the top-paying professionals within these sectors were medical doctors (\$11,710), university, polytechnic & other higher education teachers (\$9,200), information technology managers (\$8,083) and financial analysts & related professionals (\$8,000).

Within associate professionals & technical occupations, the wage disparity across industries was less pronounced. Financial services paid the highest median gross wage of \$3,700 and hotels & restaurants the least at \$2,500. Among clerical workers, the top paymasters were professional services (\$2,400), financial services (\$2,298) and transport & storage (\$2,249) and the least was construction (\$1,300). The detailed occupations by industry are listed in [Appendix 3](#).

Chart 4 : Median Monthly Gross Wage of Workers Aged 35 – 39 by Industry and Occupational Group, June 2008

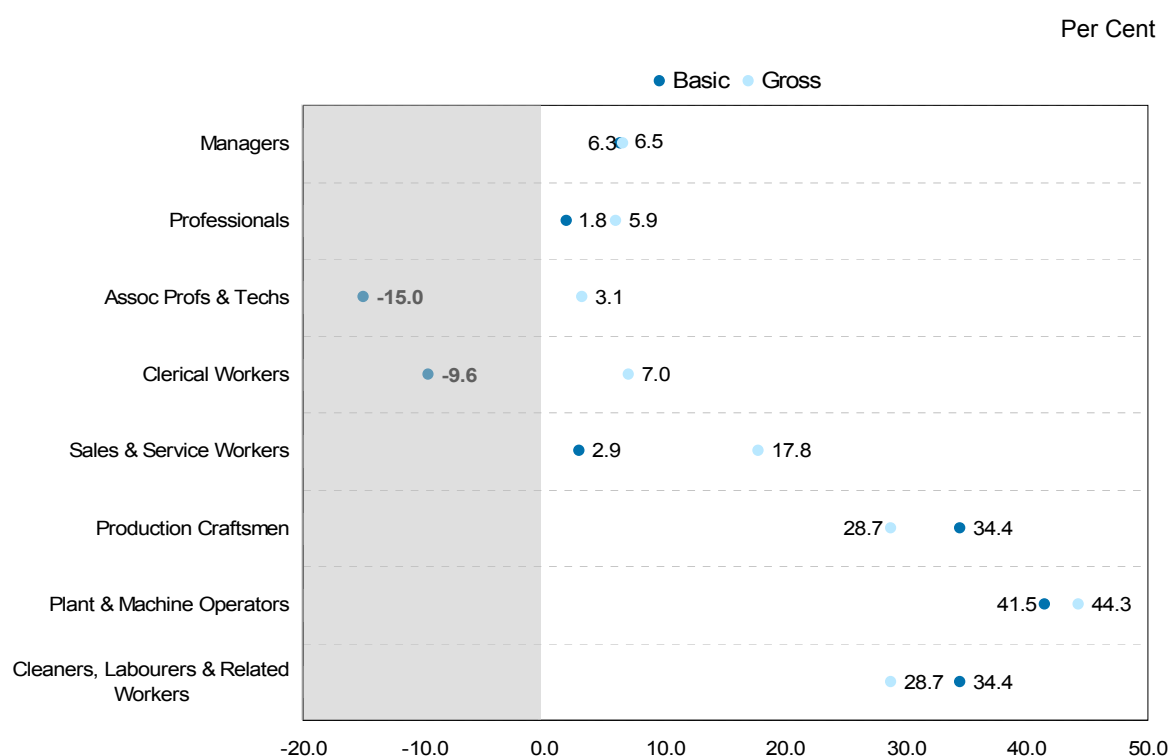

6 WAGES BY GENDER

Similar to the experience in other countries, females generally earn less than males. The gender wage gap was small among associate professionals & technicians (3.1%), professionals (5.9%), managers (6.5%) and clerical workers (7.0%) where women were paid close to that of men for those aged 35 - 39 ([Chart 5](#)). In blue-collar occupations, the wage gap was wider, with women earning only about 60% that of men for the group of plant & machine operators. This could reflect the different jobs that males and females hold within the occupational group. For instance, females tend to concentrate in occupations such as electronic equipment/component assemblers which typically pay less than the male-dominated crane & hoist operators.

Removing components such as overtime payment and allowances to avoid skewing the results as men work relatively more overtime than women, the gender difference in basic wages generally narrowed across various occupational groups, except for production craftsmen and cleaners, labourers & related workers.

Chart 5 : Gender Wage Difference¹ for Workers Aged 35 – 39 by Occupational Group, June 2008

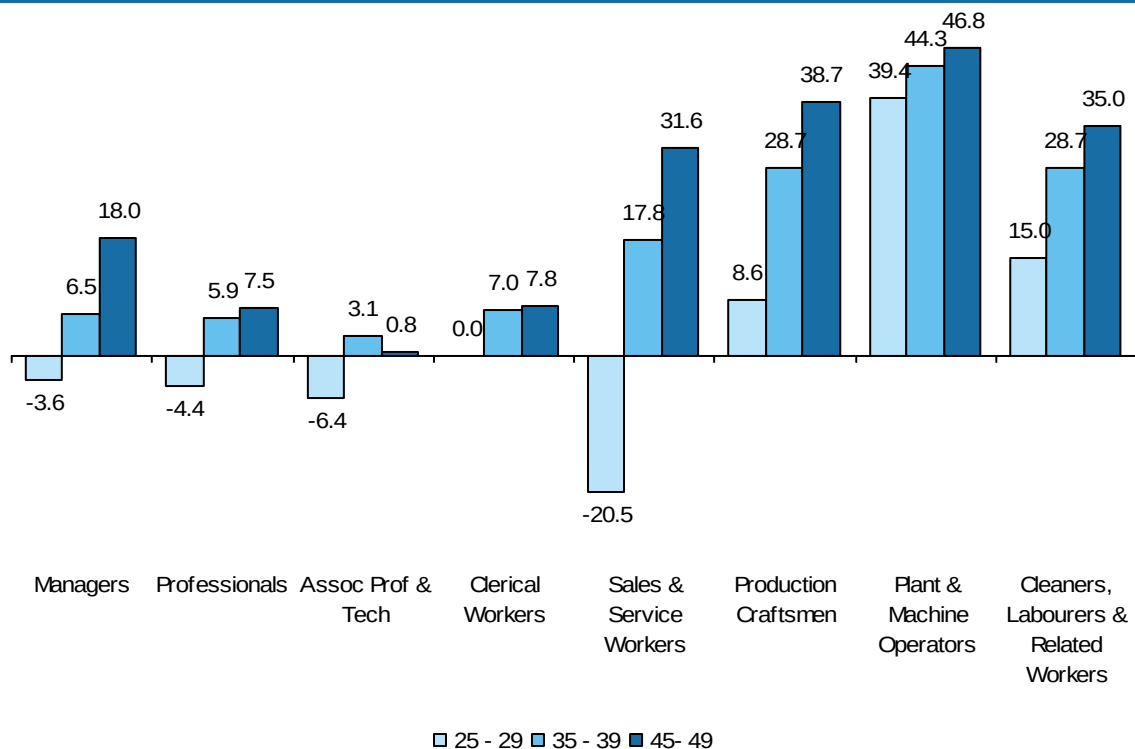

¹Gender Wage Difference = $(1 - (\text{Female Median Wage} / \text{Male Median Wage})) \times 100\%$

Table 3 : Median Monthly Basic and Gross Wage for Workers Aged 35 – 39 by Gender and Occupational Group, June 2008

Occupational Group	Males		Females	
	Basic Wage (\$)	Gross Wage (\$)	Basic Wage (\$)	Gross Wage (\$)
Managers	6,404	6,720	6,000	6,280
Professionals	4,800	5,152	4,715	4,850
Associate Professionals & Technicians	2,600	3,218	2,990	3,117
Clerical Workers	1,780	2,249	1,950	2,091
Sales & Service Workers	1,773	2,783	1,721	2,289
Production Craftsmen	1,830	2,316	1,200	1,651
Plant & Machine Operators	1,830	2,589	1,070	1,442
Cleaners, Labourers & Related Workers	1,219	1,447	800	1,031

The gender wage gap generally rose with age. In fact, for the younger age group of 25 - 29, females earned more than males by as much as 21% for sales & service workers, 6.4% for associate professionals & technicians and around 4.0% for managers and professionals ([Chart 6](#)). As age increases, females are more likely to take career breaks to take care of their family, causing a reduction in their work experience and hence, pay relative to men.

Chart 6 : Gender Wage Difference (%) by Occupational and Selected Age Groups, June 2008

Besides differences in work experience, other reasons contributing to the gender wage gap included differences in skills, qualifications, job nature and level. In some cases, the pay differential could also reflect the personal choice of women to take lower-paying jobs to concentrate on their families.

7 MONTHLY COMMENCING WAGE

This section focuses on the commencing wage which refers to the wage that is paid to a new employee without any prior relevant working experience. In June 2008, the group of professionals started at a relatively high median gross monthly wage of \$3,050 reflecting the wage premium for jobs requiring professional and specialist skills. Within this group, engineers were generally paid more than application programmers and system designers/analysts.

New entrants engaged as associate professionals and technicians were paid the second highest at \$2,008, ranging from purchasing agents (\$2,610) to pre-primary education teachers (\$1,100). As a group, clerical workers had a median commencing gross wages of \$1,507, with those in specialised areas such as banking, shipping or human resource generally paid better than customer service clerks. Among sales & service workers, jobs such as captains/waiter supervisors (\$1,562) which typically require supervisory skills earned close to 50% more than waiters (\$1,080), bringing the median wage for the sales & service group to \$1,335.

The starting salaries of blue-collar workers ranged from \$1,400 to \$900 with cleaners, labourers & related workers being paid the lowest. Within the latter, material & freight handling workers commanded a higher starting salary than those in cleaning-related jobs. For instance, godown labourers (\$1,506) were paid 1.5 times more than office cleaners (\$600) ([Table 4](#)).

Lorry Attendant	21	1,102	Office Cleaner	63	600

8 CONCLUDING REMARKS

The labour market continues to place a premium on skills and knowledge. This attests to the value of skills upgrading and training in enhancing wage and employment prospects.

PART II

Survey Coverage and Methodology

SURVEY COVERAGE AND METHODOLOGY

SURVEY ON ANNUAL WAGE CHANGES, 2008

Introduction

The *Survey on Annual Wage Changes, 2008* was conducted by the Manpower Research and Statistics Department of the Ministry of Manpower from 18 December 2008 to 06 March 2009. The survey was conducted under the Statistics Act (Chapter 317).

Objective

The survey was conducted to obtain information on the extent of wage changes and wage restructuring in 2008.

Coverage

The survey covered establishments in the private sector. All unionised establishments were surveyed. For the non-unionised sector, all establishments with 250 or more employees were surveyed. A systematic random sample was then drawn from the remaining establishments stratified by industry and employee size group to obtain an optimal sample size, so as to achieve a reasonable accuracy of the survey results.

This sampling methodology yielded an effective sample of 4,143 private establishments, of which 912 were unionised and 3,231 were non-unionised. These establishments employed 299,400 rank-and-file employees and 180,900 junior and 50,200 senior management staff who were in continuous employment of at least 1 year and were in the Central Provident Fund (CPF) scheme. The survey response rate was 88.1%.

Methodology

The survey was conducted using mail questionnaires with clarifications made over the phone.

Reference Period

The reference period for the survey was from November/December 2007 to November/December 2008.

Data Collected

The establishments were asked to provide information on the average payment of basic wage change, Annual Wage Supplement (AWS) and variable bonus to employees in 2008. The information collected pertains to full-time employees on the CPF scheme who had been with the establishment for at least one year as at 30 Nov 2008.

The establishments were also surveyed on the progress of wage restructuring in terms of whether they had adopted the three key recommendations of the Tripartite Taskforce on the Wage Restructuring namely:

- (i) implement variable bonus linked to Key Performance Indicators (KPI) i.e. have formulated and communicated to their employees, the KPI for the payment of the variable bonus;
- (ii) introduced the monthly variable (MVC) in the wage structure; and
- (iii) narrow the maximum-minimum ratio for the majority of their employees to an average of 1.5 or less.

In the 2008/09 National Wages Council Guidelines, establishments were encouraged to pay a one-off special payment to rank and file employees to help them cope with higher inflation. Information on the one-off special payment was collected in this survey. In addition, establishments were also asked regarding possible cut in wages in view of the economic downturn and employees' acceptance of wage cut. Other information collected includes the performance management system in establishments and their satisfaction with the level of flexibility of the wage system.

Data concerning the monthly variable component and maximum-minimum salary ratio of the most common job among full-time employees were also collected.

Analysis

The first section of the report on the extent of wage changes in private sector in 2008 is based on private sector establishments with at least 10 workers.

The subsequent sections of the report on employers' response to NWC recommendation on the one-off special payment to RAF workers and wage restructuring outcome are based on private sector establishments with at least 25 workers, unless otherwise specified. This is to be comparable with figures for the inaugural Survey on Wage Restructuring as at June 2004.

Classification

The industries of the surveyed firms were classified according to the Singapore Standard Industrial Classification (SSIC) 2005.

Concepts and Definitions

Rank-and-File Employees	:	This includes employees who are in technical, clerical, sales, service, production, transport and cleaning-related positions. They are not employees in managerial or executive positions.
Junior Management Staff	:	This refers to executives and managers who do not hold senior managerial responsibilities. They do not have substantial influence over hiring, firing, promotion, transfer, reward or discipline of employees.
Basic Wage	:	This refers to the total basic pay before deductions of the employees' CPF contributions and personal income tax. It excludes employers' CPF contributions, bonuses, overtime payments, commissions, allowances (e.g. shift, food, housing and transport), other monetary payments and payments-in-kind.
Basic Wage Increase	:	This usually comprises wage adjustments and built-in increments such as annual (or service), merit and NWC increments. Promotional increments are to be <u>excluded</u> .
Annual Wage Supplement (AWS)	:	This refers to the annual payment usually made at year-end. It is commonly known as the 13 th month allowance.
Variable Bonus	:	This refers to the payment given over and above the AWS or the 13 th month allowance. It includes incentive payments and 'ang pows'. The variable bonus is usually linked to company and/or individual's performance and may vary from year to year. It may be paid in a lump sum or divided into several payments over the year (in which case the several payments should be added together).
Annual Variable Component	:	This usually consists of 2 components i.e. the AWS, and variable bonus. Generally, the annual variable component is linked to company's profitability.

One-off Special Payment	:	In the 2008/09 National Wages Council Guidelines, establishments were encouraged to pay a one-off special payment to rank-and-file employees to help them cope with higher inflation. This payment may be paid in a lump sum or divided into several payments over the year, in which case the several payments should be added together.
Low Wage Employees	:	This generally refers to employees who earn around \$1,200 or less per month on a full-time basis.
Monthly Variable Component (MVC)	:	This refers to the component of monthly basic wage that can be adjusted expeditiously in response to changing business conditions. It should attract CPF, overtime pay, allowances, etc. The MVC can be built-up through wage increase or “hived off” from basic wage.
Formal Appraisal or Performance Management System	:	This refers to a system which ensures that employees are aware of their key job duties; understand the level of performance expected of them; are assessed based on certain targets and performance indicators at least one year; receive timely feedback about their performance and receive performance grading.

Formulae

- Basic Wage Change in 2008

$$= \frac{\text{End 2008 Basic Wage} - \text{End 2007 Basic Wage}}{\text{End 2007 Basic Wage}} \times 100\%$$

- Total Wage Change in 2008

$$= \frac{\text{2008 Total Wage} - \text{2007 Total Wage}}{\text{2007 Total Wage}} \times 100\%$$

where

Total Wage = Annual Basic Wage + Annual Variable Component (i.e. AWS and Variable Bonus)

Reliability of Data

In a sample survey, inferences about the target population are drawn from the data collected from the sample. Errors due to extension of the conclusions based on one sample to the entire population are known as sampling errors. The sampling error of an estimate is the difference between the estimated value obtained from a sample and the actual value from the population. Factors influencing the sampling error include the sample size, the sample design, method of estimation, the variability of the population and the characteristics studied.

The most common measure of the sampling error of an estimate is its standard error, which is a measure of the variation among the estimates derived from all possible samples. An alternative measure is the relative standard error of an estimate which indicates the standard error relative to the magnitude of the estimate. A sample estimate and an estimate of its standard error can be used to construct an interval that will, at specified levels of confidence, include the actual value. About 68, 95 and 99 per cent of estimates from all possible samples will fall within the interval defined by one, two or three standard errors respectively on either side of the estimate. By statistical convention, the confidence level has been set at 95 per cent.

Estimates of the sampling variability of selected indicators are as follows:

		Estimate	Standard Error %-pts	Relative Standard Error (%)	95% Confidence Interval	
					Lower	Upper
Proportion of employees in establishments that implemented at least one key wage recommendation by number of recommendations implemented	Some recommendations	83.6%	0.4%	0.5%	82.9%	84.4%
	Three recommendations	17.0%	0.2%	1.2%	16.5%	17.4%
	Two recommendations	28.1%	0.4%	1.3%	27.3%	28.8%
	One recommendation	38.6%	0.5%	1.2%	37.7%	39.6%
Proportion of employees in establishments that implemented the following key wage recommendations	Variable Bonus linked to KPI	54.1%	0.4%	0.8%	53.3%	54.9%
	Monthly Variable Component	33.8%	0.3%	0.9%	33.2%	34.4%
	Max-Min Ratio	57.8%	0.5%	0.8%	56.9%	58.7%

SURVEY COVERAGE AND METHODOLOGY

OCCUPATIONAL WAGE SURVEY, 2008

Introduction

The Occupational Wage Survey, 2008 was conducted by the Central Provident Fund (CPF) Board on behalf of the Ministry of Manpower from July to December 2008. The survey was conducted under Section 76 (1) of the CPF Act (1999 Edition) which empowers the Board to collect and compile statistics relating to employers and employees.

Objective

The survey was conducted to obtain wage statistics of common occupations.

Coverage

The survey covered only establishments in the private sector. A representative sample of private sector establishments with at least 25 employees, stratified by industry, was surveyed. The effective sample consisted of 3,099 private sector establishments, covering some 238,550 CPF contributors in full-time employment. The survey response rate was 89.5%.

Methodology

The survey was conducted through mail questionnaires. Employers were required to provide information on their employees' wages and job titles. Only employees contributing to the CPF were covered.

Reference Period

The survey reference period was the month of June 2008.

Data Collected

Four types of monthly wage statistics were collected, namely commencing basic and commencing gross, basic and gross wages. Wages for the daily and hourly rated contributors were converted to their monthly equivalence using appropriate expansion factors.

The following types of contributors were excluded for the tabulation of monthly basic and gross wages :

- Apprentices/Trainees;
- Temporary workers;
- Part-time workers;
- Piece rated workers; and
- Workers who worked part month in the month of June 2008

In addition, workers whose pay is based on commission were excluded for the tabulation of monthly basic wage. As for the tabulation of commencing basic and commencing gross wages, besides all of the abovementioned exclusions, managerial occupations which typically require experience are also excluded.

Wage data by gender and age were obtained by matching the survey data with the CPF Board's administrative records.

Classification

The occupations of the CPF contributors and the industries of the surveyed establishments were classified according to the Singapore Standard Occupational Classification (SSOC) 2005 and Singapore Standard Industrial Classification (SSIC) 2005 respectively.

Analysis

The analysis of the data will be made principally using the median concept to lessen the "extreme scores" effect. The median is less sensitive to extreme scores than the mean, making it a better measure for highly skewed distributions¹ such as wages which can be skewed by a relatively small number of higher earners at the top end of the distribution.

¹ Rice Virtual Lab of Statistics

Statistical Notes

The following should be noted when using wage data obtained from the survey :

- Changes in occupational wage levels over time should be interpreted with care. The changes not only reflect wage increases paid to the workers but also the changes in composition within the occupational group. For instance, a large increase in new entrants into a particular occupation may depress the average wage level for that occupation. Data may also fluctuate year to year due to sampling variability.
- The occupations of the CPF contributors surveyed were based solely on the job titles provided by their employers. This may result in lower wage data for certain occupations, especially those requiring professional qualifications, when a significant number of contributors without the necessary qualifications (and earning less than their suitably qualified counterparts) were given such professional titles by their employers.
- The wage data compiled exclude bonuses and profit sharing. The wages for certain occupations, especially those where performance-based bonuses constitute a significant portion of total wage, would be lower than expected. Examples of such occupations are brokers, dealers and senior management staff.
- The occupational wage data presented are those of full-time employees only. This provides a more meaningful basis for comparison of wages across occupations.
- Wages are determined by a host of factors, including the scope, responsibilities, requirements and working conditions of the job; as well as the productivity, qualifications, experience and innate ability of the worker. The state of the labour market in terms of the demand and supply factors also influences the wages paid.
- The scope and job responsibilities of CPF contributors classified under the same occupation may vary widely across establishments, especially for occupations like managing director and the various types of managers.

Concepts and Definitions

Establishment	: An establishment refers to an economic unit that produces goods or services at a single physical location and engages in one, or predominantly one type of economic activity. Thus, each branch of a multi-branch organisation at a different location is conceptually a different establishment. However, if in practice the required statistics are centrally kept such that it is not possible to obtain separate data for each individual unit or branch, the organisation or enterprise is treated as a single reporting unit and allowed to submit a consolidated return covering all the units or branches.
CPF Contributor	: This refers to an employee who has made CPF contributions for the month of June.
Monthly Commencing Basic Wage	: This refers to the basic wage paid to a new employee without any prior relevant working experience.
Monthly Commencing Gross Wage	: This refers to the gross wage paid to a new employee without any prior relevant working experience.
Monthly Basic Wage	: This refers to the basic pay before deductions of the employee's CPF contributions and personal income tax. It excludes employer's CPF contributions, bonuses, overtime payments, commissions, allowances (on shift, food, housing, transport etc.), service points (for employees in the hotel and catering business), other monetary payments and payments-in-kind.
Monthly Gross Wage	: This refers is the sum of the basic wage, overtime payments, commissions, allowances, service points and other regular cash payments. However, it excludes employer's CPF contributions, bonuses, stock options, other lump sum payments and payments-in-kind.
Mean Wage	: This refers to the sum of wages of all employees in a particular group divided by the group size.
First Quartile Wage	: This refers to the wage at which one quarter of the employees earn below that amount.
Median Wage	: This refers to the wage at which one half of the employees earn below that amount.
Third Quartile Wage	: This refers to the wage at which three quarters of the employees earn below that amount.

Reliability of Data

In a sample survey, inferences about the target population are drawn from the data collected from the sample. Errors due to extension of the conclusions based on one sample to the entire population are known as sampling errors. The sampling error of an estimate is the difference between the estimated value obtained from a sample and the actual value from the population. Factors influencing the sampling error include the sample size, the sample design, method of estimation, the variability of the population and the characteristics studied.

The most common measure of the sampling error of an estimate is its standard error, which is a measure of the variation among the estimates derived from all possible samples. An alternative measure is the relative standard error of an estimate which indicates the standard error relative to the magnitude of the estimate. A sample estimate and an estimate of its standard error can be used to construct an interval that will, at specified levels of confidence, include the actual value. About 68, 95 and 99 per cent of estimates from all possible samples will fall within the interval defined by one, two or three standard errors respectively on either side of the estimate. By statistical convention, the confidence level has been set at 95 per cent.

Estimates of the sampling variability of the mean monthly gross wage of selected occupations are as follows:

	Estimate	Standard Error	Relative Standard Error	95% Confidence Interval	
				Lower	Upper
Operations Manager (Finance)	\$9,304	\$129	1.4%	\$9,046	\$9,562

Notes :

- 1 Monthly earnings refer to all remuneration received before deduction of the employee's CPF contributions and personal income tax. They include basic wage, overtime payments, commissions, allowances and other monetary payments, annual wage supplement (AWS) and variable bonuses but exclude employer's CPF contributions.
- 2 Data pertain to all full-time and part-time employees who contribute to the CPF. All identifiable self-employed persons are excluded.
- 3 Industries are classified based on SSIC 2005.

Universities	86.2	89.8	87.3	7.1	4.7	4.0	93.3	94.5	91.3	2,636	2,867	2,750	2,955	2,850
Polytechnics														
Fresh Graduates	72.1	75.3	68.5	19.3	17.7	21.3	91.3	93.0	89.8	1,711	1,805	1,700	1,854	1,800
Post-NS Graduates	79.9	82.3	76.0	11.2	10.4	11.8	91.1	92.7	87.8	2,029	2,171	2,000	2,152	2,000
ITE														
Fresh Graduates	54.1	71.1	61.9	33.9	21.8	26.3	88.0	92.9	88.3	1,242	1,273	1,217	1,345	1,300
Post-NS Graduates	70.0	79.8	76.4	20.2	14.2	14.4	90.3	93.9	90.8	1,521	1,554	1,400	1,697	1,600

- Notes : 1 Employment rate refers to the proportion of economically active graduates (i.e. graduates who have entered the labour market) who were employed as at the reference date, approximately 6 months after completing their final examinations.
- 2 Full-time permanent employment refers to employment of at least 30 hours a week and where the employment is not temporary. It includes those on contracts of one year or more.
- 3 Part-time or temporary employment refers to employment of less than 30 hours a week and where employment is casual, interim or seasonal. It includes those on contracts of less than one year.
- 4 Monthly gross starting salary comprises the basic salary, fixed allowances, overtime pay and commissions. Bonuses are excluded.
- 5 Fresh graduates refer to those who had completed their studies in the year and were not liable for National Service (NS) after graduation or had already completed their NS.
- 6 Post-NS graduates refer to male graduates who had completed their studies about 2 years earlier. For example, 2008 data pertains to male graduates who completed their full-time NS between April 2007 and Mar 2008 for Polytechnics and ITE graduates.
- 7 Universities refer to Nanyang Technological University (NTU), National University of Singapore (NUS) and Singapore Management University (SMU).
- 8 Polytechnics refer to Nanyang Polytechnic (NYP), Ngee Ann Polytechnic (NP), Republic Polytechnic (RP), Singapore Polytechnic (SP) and Temasek Polytechnic (TP).
- p Data are preliminary.

Bachelor of Science (Real Estate)	NUS	s	s	s	s
Bachelor of Social Sciences (Honours); Bachelor of Social Science	NUS, SMU	286	84.6	2,888	2,800

Notes :

- Universities refers to Nanyang Technological University (NTU), National University of Singapore (NUS) and Singapore Management University (SMU).
- Employment number refers to those who responded to the survey and indicated they were employed on a full-time permanent basis as at 1 Nov 2008.
- Employment rate refers to the proportion of economically active graduates (i.e. graduates who have entered the labour market) who were employed on a full-time permanent basis as at 1 Nov 2008 (i.e. approximately 6 months after completing their final examinations).
- Full-time permanent employment refers to employment of at least 30 hours a week and where the employment is not temporary. It includes those on contracts of one year or more.
- Monthly gross starting salary comprises the basic salary, fixed allowances, overtime pay and commissions. Bon~~u~~excludes.
- Data on law and medical graduates were not reflected as a significant number of them were still doing practical law course/ reading in chambers or serving housemanship.
- s Data have been suppressed because the number of employed graduate respondents was less than 10 and / or proportion of respondents is low.
- n.a. Not available.
- p Data are preliminary.

Source : Graduate Employment Surveys conducted by the various Polytechnics

Notes :

- 1 Polytechnics refer to Nanyang Polytechnic (NYP), Ngee Ann Polytechnic (NP), Republic Polytechnic (RP), Singapore Polytechnic (SP) and Temasek Polytechnic (TP).
 - 2 Fresh graduates refer to those who had completed their studies in 2008 and were not liable for National Service (NS) after graduation or had already completed their NS.
 - 3 Post-NS graduates refer to male graduates who had completed their studies in 2005 and their full-time NS between April 2007 and Mar 2008.
 - 4 Employment number refers to those who responded to the survey and indicated they were employed on a full-time permanent basis as at 1 Oct 2008.
 - 5 Employment rate refers to the proportion of economically active graduates (i.e. graduates who have entered the labour market) who were employed on a full-time permanent basis as at 1 Oct 2008 (i.e. approximately 6 months after completing their final examinations).
 - 6 Full-time permanent employment refers to employment of at least 30 hours a week and where the employment is not temporary. It includes those on contracts of one year or more.
 - 7 Monthly gross starting salary comprises the basic salary, fixed allowances, overtime pay and commissions. Bonuses are excluded.
- s Data have been suppressed because the number of employed graduate respondents was less than 10 and / or the proportion of respondents is low.
- n.a. Not available.
- p Data are preliminary.

Notes :

- 1 Data covered 2 cohorts of graduates who completed their full-time training in Dec 2007 and Mar 2008, and were surveyed on their employment status as at July 2008 and Oct 2008 respectively (i.e. approximately 6 months after completing their final examinations).
- 2 Fresh graduates refer to those who had completed their studies in 2008 and were not liable for National Service (NS) after graduation or had already completed their NS.
- 3 Post-NS graduates refer to male graduates who had completed their studies in 2005 and their full-time NS between April 2007 and Mar 2008.
- 4 Employment number refers to those who responded to the survey and indicated they were employed on a full-time permanent basis at the time of survey.
- 5 Employment rate refers to the proportion of economically active graduates (i.e. graduates who have entered the labour market) who were employed on a full-time permanent basis as at the reference date (i.e. approximately 6 months after completing their final examinations).
- 6 Full-time permanent employment refers to employment of at least 30 hours a week and where the employment is not temporary. It includes those on contracts of one year or more.
- 7 Monthly gross starting salary comprises the basic salary, fixed allowances, overtime pay and commissions. Bonuses are excluded.
- s Data have been suppressed because the number of employed graduate respondents was less than 10 and / or the proportion of respondents is low.
- n.a. Not available.
- p Data are preliminary.

National Wage Council (NWC) Wage Guidelines

NATIONAL WAGES COUNCIL GUIDELINES FOR 2009/2010

1. The National Wages Council (NWC) has completed its deliberations on wage and wage-related guidelines for 2009/2010.

2008 Economic, Labour Market, Productivity, Wages and Inflation Trends

2. Singapore's economic growth slowed to 1.1% in 2008, significantly lower than the 7.8% growth in 2007. In particular, the fourth quarter of 2008 contracted by 4.2% on a year-on-year basis.

3. Total employment growth of 221,600 in 2008 was also lower than the growth of 234,900 in 2007. With the economy weakening towards the end of the year, the seasonally adjusted unemployment rate rose to 2.5% (overall) and 3.6% (resident) in Dec 2008, up from 2.3% and 3.4% respectively in Sep 2008. Redundancies also hit a high of 9,410 workers in the fourth quarter of 2008, making up more than half of the 16,880 redundancies in the whole of 2008.

4. Meanwhile, overall labour productivity declined sharply from -0.8% in 2007 to -7.8% in 2008 due to slower GDP growth and strong employment gains in the first half of 2008. This is the second year that labour productivity has contracted.

5. The consumer price index (CPI) rose by 6.5% in 2008, compared to 2.1% in the previous year. This was mainly due to higher growth of global oil and food prices in the first half of the year, but these began to moderate in the second half of the year.

6. With the economic downturn and increased business costs, wage increases granted were more restrained last year. Nominal total wages rose by 4.2% in 2008, lower than 5.9% in 2007. This was the result of a basic wage gain of 4.4% (compared to 4.3% in 2007) and a 2.1% decline in bonus payout of 2.31 months in 2008 (compared to 2.36 months in 2007). After adjusting for the high inflation in 2008, real total and basic wage in 2008 contracted by 2.3% and 2.1% respectively (see Annex).

7. In 2008, productivity fell sharper than the fall in real basic wages (see Chart 1 at Annex). To be sustainable and to maintain cost competitiveness, wage increases, especially built-in wage increases, should lag productivity growth. For the first time since 2002, cumulative gains in real basic wages have outstripped cumulative productivity gains (see Chart 2 at Annex). Nonetheless, taken over a longer period, the growth in productivity still slightly exceeded real total and basic wages (see annualised data at Table 2 in Annex).

8. Overall Unit Labour Cost (ULC) increased for the fourth straight year, by 9.6% in 2008, higher than the 5.2% increase in 2007, reflecting largely the contraction in productivity in 2008.

Outlook for 2009

9. The GDP in the first quarter of 2009 has contracted by 10.1% on a year-on-year basis, deeper than the 4.2% contraction in the fourth quarter of 2008. Given the sharp deterioration of the economic performance in the first quarter of 2009, and the weak global outlook for the rest of the year, MTI revised downwards in April 2009 its forecast for 2009 GDP growth to -9.0% to -6.0%, which is lower than the -5.0% to -2.0% forecast in January 2009. Notwithstanding recent optimism expressed by some analysts, the economic outlook remains uncertain.

10. Reflecting the sharp deterioration in economic conditions, preliminary estimates show that redundancies rose to 12,600 in the first quarter of 2009, higher than the 9,410 in the fourth quarter of 2008. The seasonally adjusted unemployment rate rose to 3.2% (overall) and 4.8% (resident) in March 2009. With the economy expected to remain weak for the rest of 2009, MOM expects the labour market to soften further, with retrenchments and unemployment to be significantly higher than in 2008.

11. However, CPI inflation has started to moderate. In the first quarter of 2009, CPI went up by 2.1% on a year-on-year basis, lower than the 6.6% in the same period a year ago and the high of 7.5% in the second quarter of 2008. CPI is forecast to be between -1% to 0% in 2009.

NWC Guidelines for 2009/2010

12. Given the deep global recession, the uncertainty in the economic outlook coupled with the impact of a possible Influenza A (H1N1-2009) pandemic, we need to be prepared for the eventuality of a prolonged downturn. **The NWC therefore recommends in the 2009/2010 wage guidelines that employers, unions and the government press on with concerted actions recommended in NWC's January 2009 guidelines to cut costs, save jobs and enhance competitiveness.** This could be done through management leading by example in the following areas:

- Wage freeze or cut;
- Implementation of other cost cutting measures and initiatives to cope with the downturn;
- Enhancement of wage flexibility; and
- Improvement in productivity

Persist with "Cut Costs to Save Jobs"

13. **The NWC strongly recommends that for companies whose business, profitability and/or prospects are affected by the economic downturn, they could, in consultation with their unions/workers, implement a wage freeze or wage cut in line with their performance and prospects, in order to help companies stay competitive and save jobs.**

14. **Companies which perform well should reward their workers with moderate wage increases, preferably in the form of variable payment, so that their long-term cost competitiveness would not be affected.**

Implement other Cost Cutting Measures

15. The NWC notes that the Tripartite Guidelines on Managing Excess Manpower (MEM Guidelines) have recently been updated to ensure they stay relevant to help companies and workers manage any prolonged downturn. **The Council endorses the updated Tripartite Guidelines and strongly urges companies with excess manpower to implement the various recommended measures such as shorter work week, temporary layoffs, no pay leave, and other work arrangements as alternatives to retrenchments. Workers should work together with employers to implement these measures so as to cut costs and save jobs.**

16. In implementing such measures including wage freeze or cut, **management is to lead by example.**

Press on with Downturn Initiatives to Enhance Resilience

17. Since the last NWC guidelines were released in January 2009, the government has announced a \$20.5 billion Resilience Package to help reduce costs and save jobs. The package includes the Jobs Credit Scheme, Workfare Income Supplement (WIS) Special Payment to help low wage workers, and various tax concessions. The MEM Guidelines have been updated, and the Skills Programme for Upgrading and Resilience (SPUR) has also been enhanced to help more professionals, managers, executives and technicians (PMETs).

18. **The Council notes that these measures have been well received by employers and unions/workers, and are making a positive impact in helping companies and workers cope with the downturn, manage costs and minimise job losses.** Based on feedback from companies collected by the tripartite partners at end March 2009, some 66% of the 1,900 companies that responded indicated that they had no plans to carry out any retrenchment exercise. Of the remaining 34% which had planned to carry out retrenchments, 4 out of 5 indicated that they had postponed their retrenchment decisions or reduced the number of workers affected as a result of the above measures, with only 1 out of 5 companies reporting that they had proceeded or would be proceeding with their retrenchment plans notwithstanding the downturn measures. **The NWC urges employers and unions/workers to continue to tap on the various tripartite measures and initiatives available to manage the impact of the downturn, reduce costs and minimise job losses.**

19. The NWC notes that there are still jobs available in some sectors which are doing well, growing or remain resilient to the current downturn. Hence, while unemployment has risen, the economy is also undergoing significant restructuring with new jobs created. In this regard, **the NWC recommends that the government continues to expand the Continuing Education & Training (CET) infrastructure. Workers are encouraged to be flexible and be prepared to upgrade current skills and learn new skills. Employers are encouraged to tap on the CET system and the various assistance measures such as SPUR to upskill their manpower and build new capabilities.**

20. **Those who are seeking employment are advised to adjust their expectations and make career switches, if necessary, to take up available jobs. Employers too, should be open to taking in workers with little or no relevant experience, and set appropriate employment terms reflecting the market realities of their sectors.** This would ensure that the growth sectors could recruit the necessary

manpower, while enabling job seekers to take up meaningful employment in these sectors. There are many schemes under SPUR to help employers recruit and train new workers, such as SPUR-JOBS and Professional Skills Programme (PSP)-Traineeship. Employers should leverage fully on such schemes.

21. Besides implementing the above measures, **the NWC also urges the government and companies to continue to look at ways to reduce non-wage costs so as to lower the overall business costs and enhance Singapore's competitiveness.**

Enhance Wage Flexibility

22. **Companies are encouraged to make use of components of the flexible wage system, including the Monthly Variable Component (MVC), to manage total wage cost.** MOM's 2008 Survey on Annual Wage Changes indicates that companies with MVC in their wage structure are better able to gain employees' acceptance of a wage cut if it has to be implemented, compared to companies without MVC. To encourage more companies to implement MVC, **the NWC endorses the recommendation in the MEM guidelines that companies could implement a cut in basic wages by introducing it as a reduction in MVC.** This would enable these companies to take the opportunity to introduce MVC and make their wages more flexible. Companies doing so should work with the unions/workers to set guidelines on restoring the MVC from future wage increases or adjustments when businesses recover.

Improve Productivity

23. The NWC notes with concern that labour productivity growth has shown a downward trend over the last four years, and labour productivity has in fact contracted in the last two years. This could affect longer term competitiveness. There is a pressing need to address this issue so that future wage increases can be supported by productivity gains, and be sustainable and competitive over the longer term. In this regard, **the Council strongly urges companies to ride on this downturn to enhance their productivity**, through innovation, best sourcing, service excellence and developing the workforce to be highly skilled, productive and flexible. Companies can improve the skills of their workforce by tapping on SPUR.

Continue with Longer Term Initiatives

24. Notwithstanding the downturn, **the NWC recommends that the tripartite partners continue to push ahead with initiatives such as enhancing the employability and employment of older workers, bringing more women back to the workforce, and enhancing efforts to help low wage, contract and informal workers.** We should not lose sight of these important longer term initiatives that would help to maximise the potential of our workforce, as well as improve employability and income of workers.

Prepare for Upturn

25. **The Council urges companies to maximize the use of the current slack manpower conditions to improve the skills of their workforce.** This is critical to raising their competitiveness when the global economy recovers. Companies and workers must not delay in participating in SPUR to upgrade skills and capabilities so that they would be in a stronger position for the recovery.

Application of NWC's Recommendations

26. The NWC recommendations cover the period from 1 July 2009 to 30 June 2010.

27. These recommendations are applicable to all employees – management, executives and rank-and-file employees, unionised and non-unionised companies in both the public and private sectors.

28. To facilitate wage negotiation, companies should share relevant information on company performance and business prospects with employees and their representatives.

Conclusion – Strong Tripartism to Overcome Adversity

29. Singapore's pragmatic and pro-active response to the recession, supported by our strong tripartite spirit, has brought about significant and positive impact on companies and workers. The various tripartite initiatives implemented over the past few months have resulted in many companies implementing alternative measures to retrenchment, therefore minimising job losses to workers.

30. The outlook remains uncertain. However, the NWC is confident that the solidarity shown by the tripartite partners in working together to address the downturn will continue to prevail and enable the smooth implementation of the NWC guidelines. This high level of co-operation, trust and understanding among the government, employers and unions will give confidence to businesses and investors, and better differentiate Singapore from other economies. More importantly, it will enable Singapore to emerge stronger, more robust and more resilient while helping to minimise job losses, and strengthen our competitiveness and capability for a better future for all.

31. The NWC looks forward to the Government's acceptance of its recommendations.

NATIONAL WAGES COUNCIL

NATIONAL WAGES COUNCIL'S REVISED GUIDELINES FOR 2008/2009 (ISSUED IN JANUARY 2009)

Economic and Labour Market Situation

1. The NWC Guidelines for July 2008 to June 2009 were issued in May 2008 against a backdrop of global economic uncertainty and high inflation and with the Ministry of Trade & Industry (MTI) forecasting GDP growth of 4.0% to 6.0% for 2008. Among others, the Council recommended that companies grant built-in wage increase commensurate with the companies' performance as well as business prospects to ensure that such increases would be sustainable. It also asked companies to consider giving a one-off special lump sum payment to rank-and-file workers to help cope with the high inflation.

2. Since then, the global economic environment has deteriorated, and Singapore has gone through negative quarter-on-quarter growth for three consecutive quarters, starting from the second quarter of 2008. For the full year of 2008, Singapore's economic growth is estimated to have grown by 1.5%¹, down from 7.7% in 2007. Given the weakening 2009 outlook of the G3 (United States, Europe and Japan) and regional economies, MTI has revised, on 2 January 2009, the GDP growth forecast to be between -2.0% and 1.0% in 2009, lower than the -1.0% to 2.0% it had forecasted in November 2008.

3. The resident unemployment rate rose to a seasonally adjusted 3.3% in September 2008 from 3.1% in June 2008 and 2.4% a year ago. 2,346 workers were retrenched in the third quarter of 2008, up from 1,798 in the second quarter of 2008 and 1,827 in the third quarter of 2007.² Retrenchments in the fourth quarter reported to MOM and NTUC had risen significantly. Unemployment and retrenchment in 2009 are expected to be substantially higher than in 2008.

4. The Consumer Price Index (CPI) inflation came down from 7.5% in the second quarter to 6.6% in the third quarter in 2008. The Monetary Authority of Singapore (MAS) has forecasted CPI inflation to come in significantly lower in 2009 at between 1.0% and 2.0% in view of the sharp fall in global commodity prices in the past few months and the freezing of HDB property annual values.

5. Labour productivity declined by 9.6% in the third quarter of 2008 as employment increased while output slowed. This is the fourth consecutive quarter of productivity decline. Meanwhile, nominal earnings³ grew by 5.5% year-on-year in the third quarter of 2008, but after adjusting for inflation, real earnings contracted by 0.9%, compared with a contraction of 4.0% in the second quarter of 2008. Overall unit labour cost (ULC) rose by 13% in the third quarter of 2008. This is the tenth consecutive quarter of increase. In manufacturing, the ULC grew by 23% which contributed to a 12% rise in unit business cost (UBC) in the third quarter.

¹ Based on advance estimates released by MTI on 2 January 2009.

² Data pertain to private sector establishments (each with at least 25 employees) and the public sector.

³ Nominal earnings refer to all remuneration received before deduction of the employee's CPF contributions and personal income tax. They include basic wage, overtime payments, commissions, allowances and other monetary payments, annual wage supplement and variable bonuses but exclude employer's CPF contributions. The 2008 wage data from the Survey on Annual Wage Changes, which NWC typically refers to in its Guidelines, is currently not available.

Cut Costs to Save Jobs

6. In the light of the deteriorating economic situation and poorer business prospects for 2009, the NWC has reviewed the guidelines issued in May 2008. The NWC notes that an increasing number of companies are facing issues of low demand and overcapacity.

7. **The NWC strongly recommends that companies adversely affected by the economic downturn, work with the unions and workers to reduce and manage total costs. They may, in consultation with their unions/workers, implement a wage freeze or wage cut commensurate with their performance and prospects, in order to help companies stay competitive and save jobs.**

8. In this regard, the NWC notes that most companies have over the years adopted flexible wage systems, which will allow them to make quick adjustments to their wage cost in response to changing business conditions. They should make use of the variable components in the wage structure, such as the annual variable component (AVC) and monthly variable component (MVC), to reduce their wage costs.

9. For companies which are less affected by the downturn or continue to perform well, they should reward their workers with moderate wage increase. In view of the uncertain outlook in the short term, such increases should largely be in the form of variable payment, so that their long-term cost competitiveness would not be affected.

10. In undertaking measures to reduce costs, the principle and spirit of leadership by example, close consultation and transparency ought to be applied.

11. **As wage costs constitute only a part of the total cost of doing business in Singapore, the NWC urges that companies take measures to reduce non-wage costs. The NWC also urges the government to reduce business costs.**

12. The NWC notes that the tripartite partners, MOM, SNEF and NTUC, have recently formulated and issued a set of Tripartite Guidelines to help companies manage excess manpower through various cost cutting measures and to consider retrenchment only as a last resort. Feedback from companies and unions has been positive. They found the Tripartite Guidelines to be timely and useful, and many companies, with the support of their unions and workers, have implemented or are considering implementing the various recommended measures. These include workers consuming their annual leave, implementing shorter work week and temporary layoff and/or using the flexible wage system to reduce cost.

13. To help companies defray the cost of retaining their workers and at the same time upgrade their capabilities and employability, the government has announced the \$600 million Skills Programme for Upgrading and Resilience (SPUR). Companies' response to SPUR has been encouraging. The government has also recently announced a significant expansion of SPUR training courses to enable more companies and workers to benefit from the programme.

14. **The NWC strongly endorses both the Tripartite Guidelines on Managing Excess Manpower and SPUR as concrete and practical measures to help companies and workers. The NWC urges companies to adopt the Tripartite Guidelines on Managing Excess Manpower and tap on SPUR so that they could**

better cope with the downturn and position themselves to ride the economic recovery. The NWC encourages workers to also take advantage of SPUR to upgrade their skills and enhance their employability. Workers should also be willing to accept measures to manage excess manpower in order to help companies save jobs. Unemployed workers should also take advantage of SPUR to upgrade themselves and be flexible in accepting new job opportunities.

Pressing Ahead with Long Term Initiatives

15. Even as companies and workers focus their efforts on managing the challenges arising from the downturn, they should continue to press on with other key initiatives covered in the NWC guidelines issued in May 2008. These include enhancing the employability of older workers and women wanting to join or return to the workforce, enhancing efforts to help low wage, contract and informal workers as well as raising productivity.

16. Companies should not lose sight of the longer term objective of enhancing the employability and employment of older workers. Under short term business and cost pressures, some companies might ease up on efforts to re-employ older workers. The NWC emphasizes the importance of continued attention by companies on re-employing older workers, albeit on shorter work week and work hours in this downturn. This will help companies to be better prepared to tap on this important pool of manpower when the economy recovers. In the same way older workers must continue to make the effort to improve their employability through training and skills upgrading.

Application of NWC Recommendations

17. **The NWC revised guidelines will apply with immediate effect until 30 June 2009.** The Council would convene in the next few months to deliberate on the 2009/2010 guidelines, which will take effect from 1 July 2009.

18. The NWC recommendations are applicable to all employees – management, executives and rank-and-file employees, unionised and non-unionised companies in both the public and private sectors.

19. To facilitate wage negotiation, companies should share relevant information on company performance and business prospects with employees and their representatives.

Conclusion: Strengthening Tripartism in Adversity

20. The strong spirit of tripartism among the government, employers and unions which is founded on trust, confidence and close cooperation over the years, is a cornerstone of our social and economic progress. This has helped us to overcome adversity, achieve strong economic growth and enhance workers' well-being. This downturn provides another opportunity for us to grow this trust and collaboration that has been the hallmark of our model of tripartism. The NWC therefore reiterates the importance of the government, employers and unions to work even more closely together to help companies and workers navigate through this difficult economic situation, so that the tripartite trust and cooperation can be further strengthened.

21. With our strong tripartite partnership, the NWC is confident that these guidelines will be implemented smoothly and effectively. It will help companies manage the impact of the downturn, and position themselves for the recovery. Management and unions/workers will emerge more united, with a stronger bond founded on trust and mutual benefit. The workforce and economy should also come out stronger and be more competitive.

22. The NWC looks forward to the Government's acceptance of its recommendations.

NATIONAL WAGES COUNCIL (NWC) GUIDELINES FOR 2008/2009 (ISSUED IN MAY 2008)

1. The National Wages Council (NWC) has completed its deliberations on wage and wage-related guidelines for 2008/2009. In its deliberations, the Council took into account the following factors:

- 2007 Economic performance, labour market conditions, productivity, wages and inflation
- Singapore's cost competitiveness
- Uncertain economic outlook for 2008
- High inflation in 2008

2007 Economic Performance, Labour Market Conditions, Productivity, Wages and Inflation Trends

2. The Singapore economy grew by 7.7% in 2007, lower than the 8.2% gain in 2006. The strong economy led to a record employment growth of 234,900 in 2007, far surpassing the 176,000 in 2006, with all major sectors registering employment growth. Supported by robust job creation, the seasonally adjusted overall and resident unemployment rates declined to 1.7% and 2.4% in Dec 07, from 2.7% and 3.7% respectively a year ago.

3. Inflation has risen. The consumer price index (CPI) rose from 1.0% in 2006 to 2.1% in 2007. This was driven by higher global commodity prices, strong economic growth and one-off factors like the GST increase.

4. Meanwhile, wages grew strongly last year. Total wages (basic wages plus bonuses) of private sector employees rose by 5.9% in 2007, higher than the increase of 4.5% in 2006. This was the result of a basic wage gain of 4.3%, which was higher than the increase of 3.6% in 2006; and an 8.3% increase in average bonus payout to 2.36 months in 2007, higher than the payout of 2.18 months in 2006. Even though inflation was higher in 2007, resulting in real basic wage increase in 2007 (2.2%) being lower than that in 2006 (2.6%), real total wage increase in 2007 (3.8%) was still higher than that in 2006 (3.5%) (see Table 1 in Annex).

5. On the other hand, labour productivity growth declined from 1.5% in 2006 to -0.9% in 2007. This was partly due to the record employment gains in 2007. A key principle adopted by NWC is that the built-in wage increases should lag productivity growth over the longer term, so that the wage increases would be sustainable while maintaining cost competitiveness. **In 2007, the growth in real basic wages outpaced productivity for the second consecutive year. However, taken over a 5-year or longer period, the productivity growth still exceeded growth in real basic wages** (see Table 2 and Charts at Annex).

Cost Competitiveness

6. Overall Unit Labour Cost (ULC) rose for the third straight year in 2007, reflecting the contraction in productivity and higher wage growth amid the tight labour market. The ULC increase at 3.8% in 2007 is notably higher than the 0.5% rise in 2006. Over a longer period of 5 years, however, ULC has declined by 0.4% p.a., as productivity growth had generally kept pace with the increase in labour cost. The Relative Unit Labour Cost (RULC) in manufacturing which measures Singapore's labour cost competitiveness relative to 16 other economies rose slightly by 2.2% in 2007 due to the increase in ULC and the appreciation of the Singapore dollar.

Outlook for 2008

7. The global economic outlook for 2008 has deteriorated in recent months. The US sub-prime crisis has led to a broader liquidity crunch. Singapore's economic growth is expected to moderate to 4.0-6.0% this year. Advanced GDP estimates showed that the economy expanded by 7.2% on a year-on-year basis in the first quarter of 2008. **Going ahead, there are some downside risks to growth due to considerable uncertainty in global financial markets and the US economic slowdown.**

8. Preliminary estimates show that employment growth in the first quarter of 2008 was 68,400. Based on the GDP forecast, MOM expects continued employment growth, though it will likely be lower than the record gains in 2007. The bulk of the new jobs will be in the services sector and there will be sufficient jobs for locals, including new entrants into the labour market.

9. Higher global commodity prices have filtered into domestic prices of food and oil-related items. Although inflation is currently expected to be at the upper half of the 4.5-5.5% range in 2008, **the external factors driving inflation remain volatile and the situation has to be monitored closely.** Inflation rose sharply to 6.6% in the first quarter of 2008 compared to the same period of last year. Part of the increase was due to the revision in annual values of HDB flats, but it does not affect most Singaporeans' cost of living in cash terms as they own the flats. Inflation may moderate somewhat in the second half as the effects of one-off factors like the GST increase wear off.

NWC Wage Guidelines

Push for Productivity Improvement

10. Productivity drives sustainable wage increases. It is therefore important to ensure that wage increases lag productivity growth over the longer term. While this has been the case over the past 5 years, the gap has narrowed, partly due to the tight labour market and strong employment growth in recent years. The NWC therefore emphasises the importance of productivity improvement. In this regard, **the NWC strongly urges the government, companies and workers/unions to work together in a concerted effort to improve productivity through innovation, job re-design and stepping up of the training of workers through the enhanced Continuing Education and Training (CET) system.** This will help workers to acquire relevant skills, upgrade their existing skills and raise their productivity, as well as enable them to take on higher value-added jobs and enhance their earning capacity.

Grant Sustainable Wage Increase Commensurate with Performance and Prospects

11. In recommending the wage guidelines this year, the NWC has taken, among other factors, two special considerations into account, namely the global economic uncertainty and the high inflation this year. The NWC notes that workers, especially the low wage workers, are concerned about the high cost of living. However, the Council is also careful that pushing up wage increases to keep pace with the high inflation rate will undermine our competitiveness and will not be sustainable over the longer run. In this regard, any wage adjustments should take into account the slew of measures amounting to over \$3 billion this year that the Government has already put in place which will help Singaporeans cope with the inflation impact. These include the GST Offset Package¹, Budget 2008's surplus sharing package² as well as the Workfare Income Supplement (WIS) scheme which helps to encourage employment of low-wage workers and boost their income and CPF savings. In addition, the Government announced at this year's Budget that it would extend its freeze on fees and charges to the end of the year. The appreciation of the Singapore dollar exchange rate has helped to dampen inflationary pressures. NTUC is also helping workers to partially defray the higher cost of living through its distribution of NTUC "U Stretch" vouchers to low wage workers.

12. Given the economic uncertainty, the NWC recommends that **companies grant built-in wage increase commensurate with the companies' performance as well as business prospects to ensure that such increases are sustainable. Companies should make greater use of variable payment to reward workers for their contribution to corporate performance, taking into consideration the total wage increase to be given. As with previous years, companies which have done exceptionally well and with continued good prospects should consider granting workers a higher variable payment.**

One-off Special Payment for Rank-and-File Workers

13. To further help workers cope with the impact of higher inflation this year, taking into account Government's assistance measures and the ability of the company to pay, **companies should consider giving a one-off special lump sum payment to rank-and-file workers, with heavier weightage for low wage workers.**

Other Wage-Related Recommendations

Enhancing Employability of Older Workers

14. The NWC welcomes the government's announcement to legislate re-employment by 2012 to enable workers to work beyond age 62. **The Council strongly urges employers to work with unions/workers to implement re-employment policies and systems as soon as possible, by adopting the Tripartite Advisory on Re-employment of Older Workers** issued by the Tripartite Implementation Workgroup (TIWG). Employees are also encouraged to work longer and prepare themselves for re-employment.

¹ Including GST Credits, Senior Citizens' Bonus, Utilities-Save, Service and Conservancy Charges and Rental Rebates, Property Tax Rebate.

² Including Growth Dividends, Personal Income Tax rebates, Medisave top-ups and top-ups to the Post Secondary Education Account

15. The Council notes that there is a large pool of people who are not working, especially women. Compared to the 74.0% resident employment rate of males aged 55 to 64, the employment rate of females in the same age group is much lower at 38.6%. The NWC urges employers who are in need of workers to look into attracting this group to join the workforce.

16. Employers can tap on the ADVANTAGE! and Flexi-Works! Schemes for financial assistance in recruiting, retaining and re-employing older workers.

Enhancing Efforts to help Low Wage, Contract and Informal Workers

17. To help low wage workers including contract and informal workers benefit from the WIS and improve retirement adequacy, **the NWC urges the tripartite partners to step up efforts to help them contribute to their CPF** so that they can be eligible for WIS and participate in CPF LIFE. Employers could also consider making top-ups to their workers' CPF accounts to enhance their retirement adequacy, and enjoy tax deduction for doing so. **As with previous years, companies that are granting wage increases could include a dollar quantum for built-in wage increases as well as variable bonus payments to benefit the low wage workers more.**

18. To help contract workers, many of whom are low wage workers, **companies outsourcing work are urged to adopt the Tripartite Advisory on Responsible Outsourcing Practices.** In doing so, they could help such workers employed by their outsourced service providers to enjoy better employment terms and conditions including CPF contributions. The Advisory also encourages companies to adopt best sourcing practices and award contracts based on performance rather than headcount. This will help prevent compromises on service quality and workers' wages.

Enhancing Wage Flexibility

19. Over the years, the tripartite partners have worked at implementing flexible and performance-based wage system. Good progress has been made, with 84% of the workforce in the private sector under some form of flexible wage system, up slightly from 83% a year ago. As a more responsive wage system will enable companies to make quick adjustments to wage cost in line with changing business conditions, the NWC would like to urge companies to step up efforts to enhance their wage flexibility. This includes the introduction and building up of the Monthly Variable Component (MVC) as well as reducing the maximum-minimum salary ratio to better reflect the value of the job.

Monitoring the Situation

20. As the outlook of the economy and inflation remains uncertain, the Council urges the government, employers and unions to monitor closely the situation and the impact on companies and workers.

Application of NWC's Recommendations

21. The NWC recommendations cover the period from 1 July 2008 to 30 June 2009.

22. These recommendations are applicable to all employees – management, executives and rank-and-file employees, unionized and non-unionised companies in both the public and private sectors.

23. To facilitate wage negotiation, companies should share relevant information on company performance and business prospects with employees and their representatives.

24. The NWC looks forward to the Government's acceptance of its recommendations.

National Wages Council
16 May 2008

Table 1 : Wage Changes in 2006 and 2007

	2006	2007
Total Wage Change		
- Nominal	4.5%	5.9%
- Real	3.5%	3.8%
Basic Wage Change		
- Nominal	3.6%	4.3%
- Real	2.6%	2.2%
Variable Component Payment (Bonus)	2.18 months	2.36 months (+8.3%)

Source : Survey on Annual Wage Changes, 2007 (MOM Manpower Research and Statistics Department)

Note : Real wage changes have been adjusted by CPI: 1.0% (2006), 2.1% (2007).

Table 2 : Annualised Growth of Labour Productivity and Real Wages (2000 - 2007)

	Annualised Change (%)		
	2000-2007 (7 years)	2002-2007 (5 years)	2004-2007 (3 years)
Labour Productivity Growth	2.1%	3.0%	1.1%
Real Total Wage Growth (outpace/lag productivity growth)	2.1%	2.8%	3.7%
Real Basic Wage Growth (outpace/lag productivity growth)	1.9%	1.8%	2.5%

Source : Manpower Research and Statistics Department (wage data), DOS (labour productivity)

Note : Shaded cell indicates wage gains outstripping productivity growth.

Chart 1 : Annual Change in Labour Productivity, Real Total Wage and Real Basic Wage

In 2007, wage increase outpaced productivity.

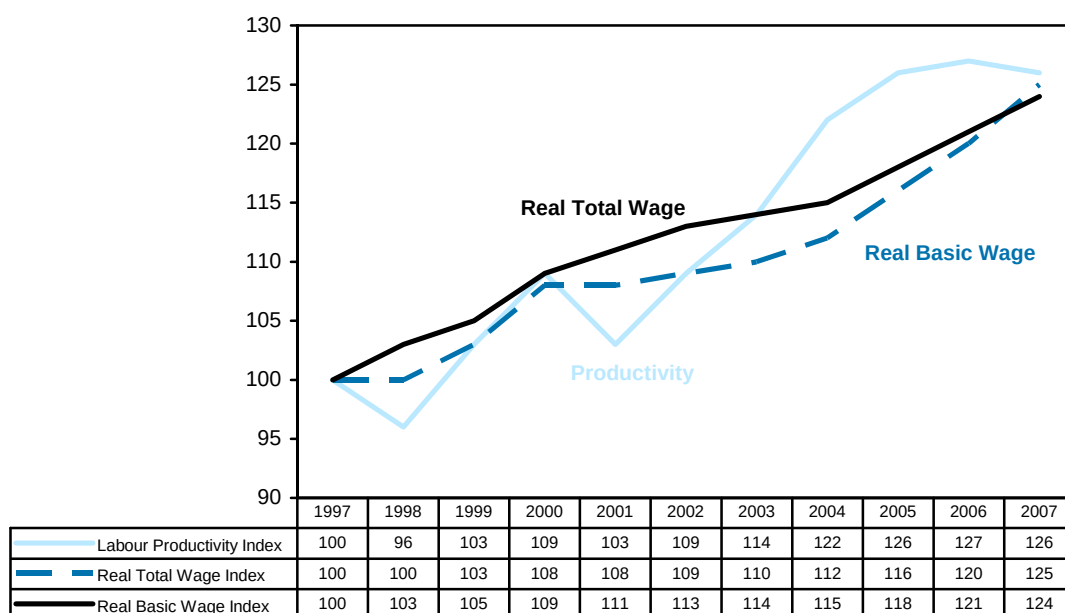

Source: MOM Survey on Annual Wage Changes and DOS (Productivity)

Note : Total and basic wage change data pertain to all employees from 1998 onwards. Before 1998, data pertain to bargainable employees who were also mainly the rank-and-file.

**Chart 2 : Labour Productivity and Wage Indices 1997 - 2007
(Base Year = 1997)**

Over a longer period (1997-2007), productivity growth still leads wage increase.

Source: MOM Survey on Annual Wage Changes and DOS (Productivity)

Notes : (1) The chart shows the cumulative impact of the annual changes in productivity and wages over the years.
(2) Total and basic wage change data pertain to all employees from 1998 onwards. Before 1998, data pertain to bargainable employees who were also mainly the rank-and-file.

FEEDBACK FORM

1 How useful is the Report on Wages in Singapore to you?

☐

Very Useful

☐

Useful

☐

Not Useful

2 How do you make use of the data in the Report?
(e.g. for wage negotiation, salary review, research, etc)

3 How do you find the section on Highlights of Survey Findings?

☐

Too detailed

☐

Just right

☐

Too brief

☐

Not necessary

4 Do the data generally meet your needs?

☐

Yes

☐

No

5 What additional information (if any) would you like us to include in our future issues?

6 Any other comments or suggestions you wish to bring to our attention?

Thank you for your valuable feedback

Just released

Singapore Yearbook of Manpower Statistics, 2009

Date of Release: 30 Jun 2009

The Report provides a wide range of statistics on the labour market situation. These include key data on labour force, job vacancy, wages, redundancy, labour turnover, hours worked, conditions of employment, labour relations, workplace injuries, higher education and skills training.

Report on Wages in Singapore, 2008

Date of Release: 30 Jun 2009

The Report presents information on wages of over 400 occupations as well as wage changes and bonuses paid in various industries. It also includes information on the extent to which employers have restructured their wage systems. The Report also provides earnings data collected by the Central Provident Fund Board and the starting salaries of the 2008 graduates from local universities, polytechnics and ITE. Additionally, the *National Wages Council (NWC) Wage Guidelines for 2009/2010* are included in this Report, along with information on the extent to which employers have restructured their wage systems.
