MISSION

*To provide timely and reliable
national statistical information on the labour market
to facilitate informed decision making within the government and community at large*

Statistical activities conducted by the Manpower Research and Statistics Department are governed by the provisions of the Statistics Act (Chapter 317). The Act guarantees the confidentiality of information collected from individuals and companies. It spells out the legislative authority and responsibility of the Director, Manpower Research and Statistics Department. Extracts of the Act are available in the Department's Internet website at www.mom.gov.sg/mrsd.

PREFACE

The Labour Force Survey of Singapore was introduced in 1974 to provide reliable and timely statistical information on the labour market. The survey is designed to capture a wide range of data on the economic activities of the population, including detailed information on employment, unemployment and the characteristics of the labour force and economically inactive persons.

The Manpower Research and Statistics Department has been conducting the mid-year comprehensive Labour Force Survey annually except in 1990, 1995, 2000 and 2005 because of the conduct of the Population Census and the General Household Survey by the Singapore Department of Statistics. Starting from 2001, a Labour Force Survey Supplement on Training has also been conducted to capture information on the incidence and intensity of training by the Singapore labour force.

The report is divided into three parts. The first part analyses the major changes in trend and structure of the labour force. The second part on survey methodology describes the objective, coverage, concepts and definitions, sampling design and reliability of data as well as other operational aspects of the survey. A total of 90 statistical tables are included in the third part of the report.

We hope this Report will meet the needs of users for up-to-date and comprehensive labour force data. The contents and presentation of the Report are reviewed regularly. We welcome readers' feedback to help us improve the Report. A "Feedback Form" page is enclosed at the end of the publication for readers' use.

We wish to thank the survey respondents for their co-operation in the survey. We are also grateful to the Singapore Department of Statistics for providing the household sample for the survey.

TAN LENG LENG (Mrs)

Data for 2005 are not available as the June Labour Force Survey was not conducted in this year due to the conduct of the General Household Survey by Department of Statistics, Ministry of Trade and Industry.

[#] Data pertain to resident workforce aged 15 to 64 and refer to training that is related to a current or future job. It includes classroom training, private lessons, correspondence courses, workshops, seminars, structured on-the-job and apprenticeship training but excludes informal on-the-job training.

* Data exclude Full-Time National Servicemen.

**To facilitate comparison with 2008, the 2007 Labour Force Survey (LFS) data have been adjusted based on Singapore Department of Statistics' revised population estimates (released in February 2008) which exclude Singapore residents who have been away from Singapore for a continuous period of 12 months or longer. Adjusted data for 2007 are denoted by the symbol ^a. Details are in the section on Survey Coverage and Methodology.

PART I

Survey Findings

HIGHLIGHTS

ON LABOUR FORCE, 2008

- The labour force grew strongly by 8.5%¹ over the year to reach 2.94 million in June 2008, contributed by growth in both residents and non-residents to 1.93 million and 1.01 million respectively.
- The educational profile of the labour force continued to improve. Nearly four in ten (38%) residents in the labour force in 2008 were tertiary educated, up from 25% in 1998. For the first time, there were more degree holders (498,400 or 26%) in the resident labour force than those in the below secondary group (467,000 or 24%).
- Riding on the strong economic performance in 2007, the employment rate for the resident population aged 25 to 64 rose to a new high of 77.0% in June 2008 from 76.5% a year ago. The improvement mainly resulted from more females who were previously outside the labour force becoming employed.
- Most of the new jobs taken up by residents were in Professional, Managerial, Executive & Technician (PMET) positions. In the last two years, there were continued employment gains for residents in PMET occupations across all major sectors, but more so in services. Conversely, the number of residents employed in non-PMET occupations fell over the past two years.
- The median monthly income from work for full-time employed residents rose over the year by 11% to \$2,590 in June 2008, up from the gain of 7.7% in the preceding year. After adjusting for higher inflation, the increase in median income was 4.1% compared with 5.5% in 2007. The income growth in 2008 partly reflects the spillover effect from the strong economic performance in the previous year and the higher proportion of PMETs (whose income are typically higher) among employed residents in 2008.
- Reflecting more cautious hiring sentiments amid the economic slowdown, the resident unemployment rate rose from a decade low of 2.4% in December 2007 to 3.1% in June 2008 (seasonally adjusted). Since then, the seasonally adjusted resident unemployment rate rose further to 3.3% in September 2008, as the economic conditions deteriorated.

¹ To facilitate comparison with 2008, the 2007 Labour Force Survey (LFS) data have been adjusted based on Singapore Department of Statistics' revised population estimates (released in February 2008) which exclude Singapore residents who have been away from Singapore for a continuous period of 12 months or longer. Adjusted data for 2007 are denoted by the symbol ^a. Details are in the Survey Coverage and Methodology section of the report.

SURVEY FINDINGS

1 LABOUR FORCE

1.1 The labour force grew strongly by 8.5%² over the year to reach 2.94 million in June 2008. This was faster than the annual increase of 6.0% in the preceding year and the average of 5.2% p.a. from 2004 to 2006. Both residents and non-residents in the labour force grew. Supported by growth in resident population³ and increase in female labour force participation, the resident labour force grew by 2.7% in 2008 to 1.93 million. In response to strong demand for workers before the onset of the global economic downturn, non-residents in the labour force grew over the year by 22% to 1.01 million in June 2008.

Table 1: Labour Force, 1998, 2004, 2006, 2007 and 2008 (As at June)

	Number					Change (% p.a.)			
	1998	2004	2006	2007	2008	1998-2004	2004-2006	2006-2007	2007-2008*
TOTAL	2,187,900	2,341,900	2,594,100	2,750,500 <i>(2,710,300^a)</i>	2,939,900	1.1	5.2	6.0	8.5
Resident	1,546,500	1,733,400	1,880,800	1,918,100 <i>(1,878,000^a)</i>	1,928,300	1.9	4.2	2.0	2.7
Non-Resident	641,400	608,500	713,200	832,400	1,011,600	-0.9	8.3	16.7	21.5

Notes: (a) ^a – Adjusted figures for 2007. See footnote 1.
(b) * – Computed based on adjusted figures for 2007.

² To facilitate comparison with 2008, the 2007 Labour Force Survey (LFS) data have been adjusted based on Singapore Department of Statistics' revised population estimates (released in February 2008) which exclude Singapore residents who have been away from Singapore for a continuous period of 12 months or longer. Adjusted data for 2007 are denoted by the symbol ^a. Details are in the Survey Coverage and Methodology section of the report.

³ The resident population aged 15 & over increased by 2.3% from June 2007 to June 2008. Source: Singapore Department of Statistics, *Population Trends 2008*.

Labour Force Participation

1.2 In June 2008, 55.6% of the female resident population aged 15 & over were economically active (i.e. employed or unemployed), up from 54.2%^a a year ago and 49.4% in 1998. In contrast, the rate for males dipped slightly to 76.1% in June 2008 from 76.3%^a in June 2007 and was also lower than 77.4% a decade ago. Overall, 65.6% of the resident population aged 15 & over participated in the labour market in June 2008, up from 65.0%^a a year ago and 63.1% in 1998.

1.3 Except for youths aged 15 to 24 whose labour force participation rate has declined over the years as more of them deferred their entry to the labour market to pursue higher education, the participation rate for females in the remaining age groups has generally risen over the years ([Chart 1](#)). This was supported by their improving educational profile, as better educated women were more likely to be economically active than those less educated. The upward impact of an improving educational profile on the age-specific labour force participation rate of females more than outweighed the dampening effect of ageing⁴ on the participation rate. This led to an increase in labour force participation of females at the overall level.

1.4 Although high, the age-specific labour force participation rate for prime-working age men was slightly lower than a decade ago, as losses in lower-end manufacturing and construction jobs over the years have adversely affected men more than women. In contrast, the rate for older men improved significantly over time, supported by the extension of the retirement age in the 1990s and tripartite efforts to enhance the employability of older persons in recent years. Nevertheless, their rate remained lower than those younger. Over time, the ageing of the population has a downward impact on labour force participation of males. Unlike in the case of females, the upward impact of an improving educational profile on the male participation rate was not sufficient to outweigh the dampening effect due to ageing, as the link between education and labour force participation rate of males was weaker than for females ([Chart 2](#)). This resulted in the slight fall in the overall male labour force participation rate over time.

⁴ Ageing has a dampening effect on labour force participation rate as older persons are less likely to be economically active than those younger.

Chart 1: Age-Specific Resident Labour Force Participation Rate, 1991, 1998 and 2008 (As at June)

Chart 2: Labour Force Participation Rate of Resident Population Aged 25 to 64 by Educational Attainment and Gender, June 2008

Profile of the Labour Force

Age

1.5 With the early batch of post-war baby boomers born between 1947 and 1964 crossing the 50-year old mark over the last decade and the increase in labour force participation in the older age groups, the share of older residents in the labour force has increased significantly. In 2008, 26% of economically active residents were aged 50 & over, up from 16% in 1998. Reflecting its ageing profile, the median age of the resident labour force increased from 37 years in 1998 to 41 years in 2008.

Chart 3: Age Profile of Resident Labour Force, 1998 and 2008 (As at June)

Education

1.6 The educational profile of the labour force continued to improve as better educated younger residents join the labour force and the relatively lower educated older workers retire. Nearly four in ten (38%) residents in the labour force in 2008 were tertiary educated, up from 25% in 1998. For the first time, there were more degree holders (498,400 or 26%) in the resident labour force than those in the below secondary group (467,000 or 24%).

Chart 4: Educational Attainment of Resident Labour Force, 1998 and 2008 (As at June)

1.7 The three most common disciplines among degree holders in the resident labour force in 2008 were Business & Administration (33%), Engineering Sciences (24%) and Humanities & Social Sciences (11%). Overall, 45% of the economically active resident degree holders obtained their highest qualification from overseas universities or institutes of higher learning (IHLs). 41% obtained their degrees from the three local universities (namely NUS, NTU and SMU) and the remaining 14% through private education institutions in Singapore.

Table 2: Economically Active Resident Degree Holders by Field and Place of Study, June 2008

CHARACTERISTICS	Number	Share (%)
TOTAL	498,400	100.0
FIELD OF STUDY		
Business & Administration	162,500	32.6
Engineering Sciences	117,900	23.7
Humanities & Social Sciences	54,200	10.9
Information Technology	43,900	8.8
Natural, Physical, Chemical & Mathematical Sciences	37,300	7.5
Health Sciences	23,500	4.7
Mass Communication & Information Science	14,900	3.0
Architecture & Building	13,600	2.7
Education	11,800	2.4
Law	8,400	1.7
Fine & Applied Arts	7,000	1.4
Others	3,300	0.7
PLACE OF STUDY		
Overseas University/Overseas Institute of Higher Learning	224,300	45.0
NUS, NTU, SMU	202,700	40.7
Private Education Institutions in Singapore	71,400	14.3

Training

1.8 Training participation stabilised in 2008 from a year ago, after rising in the previous three years. Nearly one in three (32%) residents aged 15 to 64 in the labour force were involved in some form of job-related structured training or education⁵ over the 12-month period ending June 2008. Each trainee on average (mean) participated in 13 days of training in 2008, down from 15 days in 2007 and 17 days in 2006. Consequently, the training intensity (derived by multiplying the average training days per trainee with the training participation rate) dipped to 4.3 days in 2008 from 4.9 days in 2007 and 5.1 days in 2006.

**Chart 5: Training Indicators of Economically Active Residents
Aged 15 to 64 by Economic Activity Status**

⁵ Job-related structured training or education refers to training that is related to a current or future job. It includes classroom training, private lessons, correspondence courses, workshops, seminars, structured on-the-job and apprenticeship training but excludes informal on-the-job training.

(B) Training Duration
(Mean Days Per Trainee), 2008

(C) Training Intensity
(Mean Days Per Adult), 2008

- Notes:
- (a) Training participation rate is defined as the proportion of residents aged 15 to 64 in the labour force who had engaged in some form of job-related structured training or education activities over the 12-month period ending June.
 - (b) Training intensity is measured by the duration of training per adult, derived by multiplying the training participation rate with the average training days per trainee.
 - (c) Figures in brackets refer to median.

1.9 The incidence and duration of training remained strongly skewed in favour of those younger and more educated. Close to half of degree holders (48%) participated in training, compared to just one in ten (12%) for those with below secondary qualifications. Similarly, the participation rate for those aged 20 to 29 (46%) was more than double the 21% for those aged 50 to 64.

Chart 6: Training Indicators of Economically Active Residents Aged 15 to 64

(A) By Age

(A.1) Training Participation Rate, 2000 to 2008

**(A.2) Training Intensity
(Mean Days Per Adult), 2008**

Figures in brackets refer to training duration per trainee (mean days per trainee).

(B) By Education

(B.1) Training Participation Rate, 2000 to 2008

**(B.2) Training Intensity
(Mean Days Per Adult), 2008**

Figures in brackets refer to training duration per trainee (mean days per trainee).

1.10 Training was more widespread among residents employed in financial services (54%) and community, social & personal services (48%). It was less prevalent among those employed in administrative & support services (23%) and construction (22%). Training incidence was also low among residents working in hotels & restaurants (19%), pulled down by restaurant workers (15%) whose participation rate was lower than hotel workers (39%).

Table 3: Training Indicators of Employed Residents Aged 15 to 64 by Industry, 2008

INDUSTRY	Training Participation Rate (%)	Training Duration (Mean Days Per Trainee)	Training Intensity (Mean Days Per Adult)
TOTAL	32.8	13.2	4.3
Manufacturing	29.6	14.4	4.3
Construction	21.9	8.7	1.9
Services	34.5	13.2	4.5
Wholesale & Retail Trade	25.0	11.6	2.9
Transport & Storage	24.3	9.8	2.4
Hotels & Restaurants	19.0	8.2	1.6
Information & Communications	33.0	12.0	4.0
Financial Services	54.4	9.7	5.3
Real Estate & Leasing Services	37.1	10.7	4.0
Professional Services	28.5	9.9	2.8
Administrative & Support Services	22.6	10.1	2.3
Community, Social & Personal Services	47.6	17.7	8.4

1.11 Workers who underwent training generally reported positive outcomes, mainly that training enabled them to become more productive (58%), develop new skills (49%), deliver better services leading to greater customer satisfaction (38%) and obtain more job satisfaction (33%). Workers also reported wider benefits beyond those directly related to work. 41% found their training interesting while a third reported that training helped them meet new people and boosted their self confidence/esteem (both at 34%). 25% were encouraged to do further training. Only a small minority was either dissatisfied with training (0.8%) and/or did not apply their skills/knowledge learnt on the job (3.4%).

Chart 7: Training Outcomes of Employed Residents Aged 15 to 64, 2008

Notes: (a) Respondents can indicate more than one training outcome.
(b) Figures are based on employed trainees.

2 EMPLOYMENT

2.1 Riding on the strong economic performance in 2007, the employment rate for the resident population aged 25 to 64 rose to a new high of 77.0% in June 2008 from 76.5% a year ago. The improvement mainly resulted from more females who were previously outside the labour force becoming employed.

Chart 8: Distribution of Resident Population Aged 25 to 64 by Economic Activity Status, 1991 to 2008 (As at June) (Non-Seasonally Adjusted)

Source: Labour Force Survey (LFS), except data for 1995, 2000 and 2005 which are from the Census of Population 2000 and General Household Survey (GHS) 1995 and 2005.

Notes: (a) Data from Census and GHS may not be strictly comparable with LFS as there are some differences in the survey period. GHS/Census was conducted from Mar/Apr to Aug/Sep whereas LFS was from May to Jul.
 (b) The unemployed figures above refer to the percentage of population who were unemployed. This is different from the unemployment rate, which is expressed as a percentage of the labour force.
 (c) Adjusted figures for 2007 are the same as the original figures.

2.2 Continuing an underlying uptrend, the proportion of prime-working age females aged 25 to 54 in employment rose to another new high of 70.4% in June 2008. In contrast, after improving in the last two years, the employment rate for prime-working age men dipped from 93.3% to 93.0%, slightly below pre-Asian crisis levels. Nevertheless, Singapore's employment rate for prime-working age men remained high internationally, while that for females still lagged many countries.

Chart 9: Resident Employment Rate by Selected Age Groups and Gender, 1991 to 2008 (As at June) (Non-Seasonally Adjusted)

Source: Labour Force Survey (LFS), except data for 1995, 2000 and 2005 which are from the Census of Population 2000 and General Household Survey (GHS) 1995 and 2005.

Notes: (a) Data from Census and GHS may not be strictly comparable with LFS as there are some differences in the survey period. GHS/Census was conducted from Mar/Apr to Aug/Sep whereas LFS was from May to Jul.
 (b) ^a – Adjusted figures for 2007. See footnote 1.

2.3 Amid continuing efforts to enhance the employability of older persons, the employment rate for residents aged 55 to 64 increased by another 1.0%-point over the year to 57.2% in June 2008. This was largely contributed by gains from older women from 38.6% in June 2007 to 40.5% in June 2008. While proportionately more men aged 55 to 59 and 60 to 64 were working over the year⁶, the employment rate for males aged 55 to 64 dipped slightly from 74.0% (73.9%^a) to 73.8%.

Notes: (a) Data for Singapore pertain to the resident population.

(b) Shaded cells indicate the countries whose employment rate was higher than Singapore's rate for 2007.

(c) ^a – Adjusted figures for 2007. See footnote 1.

⁶ The proportion of older males aged 55 to 59 and 60 to 64 in employment rose from 80.8% to 81.5% and 62.4% to 62.6% respectively. As the share of those aged 60 to 64 among male residents aged 55 to 64 increased from 37% in 2007 to 41% in 2008 and their employment rate was lower than those aged 55 to 59, this led to a decline in the employment rate of men in the broader age group of 55 to 64.

2.4 Most of the new jobs taken up by residents were in Professional, Managerial, Executive & Technician (PMET) positions. In the last two years, there were continued employment gains for residents in PMET occupations across all major sectors, but more so in services. Conversely, the number of residents employed in non-PMET occupations fell over the past two years. There were fewer residents employed in non-PMET jobs in manufacturing and services, but more in construction. This partly reflects the improvement in educational profile of the resident labour force. Consequently, PMETs now formed 51% of the resident workforce, up from 41% a decade ago. Correspondingly, the share of production & related workers declined from 30% to 24% and clerical, sales & service workers from 29% to 25%.

Chart 10: Share of Resident Employment Change by Occupation, 1998 to 2008 and 2006 to 2008 (As at June)

- Notes:
- (a) Data exclude full-time National Servicemen.
 - (b) Change from 1998 (2006) to 2008 are computed by summing the employment change from (i) 1998 (2006) to 2007 (based on 2007 original figures) and (ii) 2007 to 2008 (based on 2007 adjusted figures).
 - (c) The occupation data across the various years may not be strictly comparable due to revisions in the occupational classification.
 - (d) Income figures in the chart refer to the median gross monthly income from work of full-time employed residents (excluding full-time National Servicemen) for the respective occupational groups in June 2008.

Table 5: Share of Resident Employment Change by Occupation and Industry**(A) 2006 to 2008 (As at June)**

Per Cent

	Total	Manufacturing	Construction	Services	Others [^]

 - (c) ^ – Includes Agriculture, Fishing, Quarrying and Utilities.
 - (d) Change from 1998 (2006) to 2008 are computed by summing the employment change from (i) 1998 (2006) to 2007 (based on 2007 original figures) and (ii) 2007 to 2008 (based on 2007 adjusted figures).
 - (e) The industry and occupation data across the various years may not be strictly comparable due to revisions in the industrial and occupational classifications.

Chart 11: Occupational Distribution of Employed Residents, 1998 and 2008 (As at June)

Note: * – Including Agricultural & Fishery Workers and Workers Not Classifiable by Occupation.

2.5 Higher-skilled occupational groups namely professionals and associate professionals & technicians have a relatively younger age profile, with 66% and 59% of their resident workforce aged below 40 respectively. In contrast, lower-end occupations have a higher proportion of older workers, reflecting the weaker educational profile of older residents, due to the limited opportunities for higher education in the earlier years. Six out of ten residents working in cleaning, labouring & related jobs in 2008 were aged 50 & over. Other occupational groups with relatively high incidence of older workers in the resident workforce were plant & machine operators & assemblers (48%), working proprietors (45%) and production craftsmen & related workers (42%).

2.6 Across industries, administrative & support services, hotels & restaurants and transport & storage had the highest concentration of older workers with around four in ten of their employed residents aged 50 & over. At the other end, only 12% of employed residents in information & communications and financial services were aged 50 & over. The median age of employed residents in these two industries was 35 years, compared with 47 years for hotels & restaurants and 46 years for both transport & storage and administrative & support services.

Table 6: Employed Residents by Industry, Occupation and Age, June 2008

CHARACTERISTICS	Number Employed	Age Distribution (%)					Median Age (Years)
		Total	Below 30	30 – 39	40 – 49	50 & Over

Production Craftsmen & Related Workers	89,500	100.0	7.0	16.4	34.9	41.8	47
Plant & Machine Operators & Assemblers	156,400	100.0	4.6	13.1	34.7	47.6	49
Cleaners, Labourers & Related Workers	140,000	100.0	5.6	8.4	26.0	60.0	52

Notes: (a) Total includes other industries (Agriculture, Fishing, Quarrying, Utilities and Sewerage & Waste Management) and other occupations (Agricultural & Fishery Workers and Workers Not Classifiable by Occupation) which are not separately reflected in the table.

(b) Shaded cells refer to industries/occupations with above-average incidence of workers in the respective age groups or above-average median age relative to the entire resident workforce.

Employment Status

2.7 The vast majority (85%) of employed residents in 2008 were employees, while the other 15% were self-employed, comprising own account workers (i.e. persons who operate their own business without employing any paid workers), employers and contributing family workers. Over the decade, the share of own account workers in the resident workforce increased from 8.2% to 9.3%. On the other hand, the share of employees and contributing family workers fell by 0.6 and 0.5%-points respectively over the same period.

Chart 12: Distribution of Employed Residents by Employment Status, 1998 and 2008 (As at June)

2.8 Slightly over one in four (27%) self-employed residents in 2008 were working proprietors. They were followed by associate professionals & technicians (e.g. real estate agents, private tutors, insurance sales agents & brokers) (18%), plant & machine operators & assemblers (mainly taxi drivers) (16%), service & sales workers (e.g. hawkers/stall holders) (13%) and managers & administrators (mainly company directors) (10%).

Chart 13: Self-Employed Residents by Occupation, June 2008

Note: * – Includes Agricultural & Fishery Workers and Workers Not Classifiable by Occupation.

Type of Employment

2.9 Reflecting a growing trend towards greater flexibility in working arrangements, the number and share of part-timers⁷ in the resident workforce increased from 113,000^a or 6.3%^a in 2007 to 126,800 or 6.8% in 2008. Even though the part-time share of employment has more than doubled from 3.2% in 1998, full-timers still formed the large majority (93%) of employed residents in 2008.

2.10 Close to half (47%) or 59,500 of the part-timers were willing and available to work additional hours. Constituting the under-employed, they formed 3.2% of total employed residents, slightly higher than 3.1%^a (56,500^a) a year ago. Teen workers aged 15 to 19, primarily students on vacation work or engaged in work while schooling, had the highest incidence of being under-employed (14%). They were followed by older workers aged 50 & over whose under-employment rate of 5.0% was more than double that for those in their 20s (2.2%) and 30s (1.3%). Under-employment generally declined with educational attainment, ranging from 5.4% for those without secondary qualifications to 1.5% for polytechnic diploma holders and 1.6% for degree holders.

⁷ Part-timers refer to those whose normal hours of work is less than 30 hours a week.

Chart 14: Under-Employment Rate among Employed Residents, June 2008

Term Contract Employment

2.11 Continuing the increase observed in the previous year, the pool of resident employees on term contracts⁸ rose over the year by 4.9% to 189,100 in June 2008. They formed 12.4% of all resident employees, up from 12.2%^a in June 2007. The growth was led by the increase in resident employees on longer contracts of more than 2 years from 30,100^a to 35,400. Term contract employees in this group were largely higher-skilled workers holding PMET jobs. In contrast, the number and share of resident employees on short-term contracts of less than 3 months (including those on casual/on-call employment) dipped from 74,300^a or 5.0%^a to 72,200 or 4.7%. Term contract employees in this category were mainly in cleaning, labouring & related and clerical, sales & service jobs.

⁸ Employees on term contracts refer to those on fixed-term contract of employment that will terminate on the expiry of a specific term unless it is renewed, as well as those on casual/on-call employment (i.e. where persons are employed on ad hoc basis, as and when the company requires additional manpower). On the other hand, permanent employees refer to those employed for an unspecified duration, i.e. they are not on term contracts.

Table 7: Resident Employees by Type of Employment, 2007 and 2008 (As at June)

TYPE OF EMPLOYMENT	2007 ^a		2008		Change* (2007-2008) (%)
	Number	Share (%)	Number	Share (%)	
TOTAL	1,482,100	100.0	1,528,600	100.0	3.1
Permanent	1,301,900	87.8	1,339,500	87.6	2.9
Term Contract	180,200	12.2	189,100	12.4	4.9
Less than 1 year (including casual/on-call employment)	96,300	6.5	96,500	6.3	0.2
Less than 3 months (including casual/on-call employment)	74,300	5.0	72,200	4.7	-2.9
3 months to less than 6 months	11,700	0.8	13,200	0.9	12.6
6 months to less than 1 year	10,300	0.7	11,100	0.7	8.6
1 year or more	83,900	5.7	92,600	6.1	10.3
1 year	30,800	2.1	32,600	2.1	5.9
More than 1 year to 2 years	23,000	1.6	24,600	1.6	6.8
More than 2 years	30,100	2.0	35,400	2.3	17.6

- Notes: (a) Data exclude full-time National Servicemen.
(b) ^a – Adjusted figures for 2007. See footnote 1.
(c) * – Computed based on adjusted figures for 2007.
(d) Employees on term contracts refer to those on fixed-term contract of employment that will terminate on the expiry of a specific term unless it is renewed, as well as those on casual/on-call employment (i.e. where persons are employed on ad hoc basis, as and when the company requires additional manpower). On the other hand, permanent employees refer to those employed for an unspecified duration, i.e. they are not on term contracts.

Income

2.12 The median monthly income from work for full-time employed residents rose over the year by 11% to \$2,590 in June 2008, up from the gain of 7.7% in the preceding year. After adjusting for higher inflation, the increase in median income was 4.1% compared with 5.5% in 2007. Part-timers also posted higher nominal median income of \$600 compared to \$540 a year ago. Overall, the nominal median income for all employed residents increased from \$2,170 in June 2007 to \$2,450 in June 2008. The income growth in 2008 partly reflects the spillover effect from the strong economic performance in the previous year and the higher proportion of PMETs (whose income are typically higher), among employed residents in 2008.

Chart 15: Median Gross Monthly Income from Work of Employed Residents, 1996 to 2008 (As at June)

Notes: (a) * – Data exclude full-time National Servicemen.
 (b) Adjusted figures for 2007 are the same as the original figures.
 (c) June Labour Force Surveys were not conducted in 2000 and 2005 due to the conduct of the Census of Population 2000 and General Household Survey 2005 by the Department of Statistics, Ministry of Trade and Industry.

2.13 With the rise in income, the number of full-time employed low-wage workers with monthly income at or below \$1,200 declined for the second consecutive year from 334,300^a in June 2007 to 292,800 in June 2008. At 17%, the incidence of low-wage workers among full-time employed residents in 2008 fell below the 20% mark for the first time since the data series started in 1996.

Chart 16: Full-Time Employed Residents with Gross Monthly Income from Work of \$1,200 and Below, 1996 to 2008 (As at June)

- Notes: (a) Data exclude full-time National Servicemen.
 (b) ^a – Adjusted figures for 2007. See footnote 1.
 (c) June Labour Force Surveys were not conducted in 2000 and 2005 due to the conduct of the Census of Population 2000 and General Household Survey 2005 by the Department of Statistics, Ministry of Trade and Industry.

2.14 Income typically rises with educational attainment, reflecting the premium that employers place on education and skills. In June 2008, full-time employed residents with degrees commanded a median income of \$5,060, 4.2 times the \$1,190 for those with primary or lower qualifications.

Table 8: Median Gross Monthly Income from Work of Full-Time Employed Residents by Educational Attainment, June 2008

EDUCATIONAL ATTAINMENT	Median Income (\$)	Ratio to Lowest Paid Group
Primary & Below	1,190	1.0
Lower Secondary	1,500	1.3
Secondary	2,130	1.8
Upper Secondary	2,710	2.3
Polytechnic Diploma	2,900	2.4
Degree	5,060	4.2

Note: Data exclude full-time National Servicemen.

Years in Current Job

2.15 Reflecting job mobility, the proportion of resident employees who had worked for less than a year in their current job increased from 22% in 2001 to 23% in 2008. Conversely, the share of employees who had worked for at least a decade in their current job fell from 27% to 26% over the same period, while the proportion with 5 to less than 10 years of service decreased from 18% to 17%.

Chart 17: Distribution of Resident Employees by Years in Current Job, 2001 and 2008 (As at June)

Note: Data exclude full-time National Servicemen.

2.16 Expectedly, the proportion of resident employees who had worked for 10 years or more in their current job rises with age. Reflecting their relatively younger age profile, slightly less than one in five resident employees with tertiary qualifications had worked in their current job for at least a decade, compared to 34% for those with secondary education and close to three in ten in the remaining education groups. Public administration & education, real estate & leasing services, transport & storage and manufacturing had relatively high proportion of long-serving employees among their resident workers. In these industries, around one in three resident employees had worked for their current employer for at least 10 years.

Chart 18: Proportion of Resident Employees Who Had Worked for At Least 10 Years in Their Current Job, June 2008

Notes: (a) Data exclude full-time National Servicemen.
 (b) '—': Nil or negligible.

Multiple Job Holders

2.17 Only a small minority or 22,900 employed residents in June 2008 held two or more jobs. They made up 1.3% of employed residents in 2008, down from 1.7% in 2006 and 1.9% in 1999 when the data was first collected. Multiple jobholding was more prevalent among mature workers in their 40s (1.5%) compared to a mere 0.7% for those aged 25 to 29 and 1.0% for youths aged 15 to 24.

Chart 19: Proportion of Employed Residents Holding Multiple Jobs, June 2008

Note: Data exclude full-time National Servicemen.

Usual Hours Worked

2.18 Among employed residents, the usual hours worked per week averaged (mean) 48 hours for full-timers and 19 hours for part-timers in 2008. Overall, close to one in three (32%) full-time employed residents usually worked at least 50 hours a week. The incidence was higher among males (38%) than females (25%). Less educated (40% for lower secondary and 38% for primary & below) and mature residents (36% for those in their 40s and 34% for those older) also had a relatively higher share of their full-timers working long hours. Proportionately more full-timers in hotels & restaurants (49%) and transport & storage (41%) as well as those engaged as working proprietors (54%), service & sales workers (45%) and plant & machine operators & assemblers (43%) usually put in 50 hours or more each week.

Chart 20: Proportion of Full-Time Employed Residents Who Usually Worked 50 Hours or Longer Per Week, June 2008

Note: Data exclude full-time National Servicemen.

3 UNEMPLOYMENT

3.1 Reflecting more cautious hiring sentiments amid the economic slowdown, the resident unemployment rate rose from a decade low of 2.4% in December 2007 to 3.1% in June 2008 (seasonally adjusted). Both the seasonally adjusted and unadjusted unemployment rates in June 2008 were at the same levels as a year ago. Since then, the seasonally adjusted resident unemployment rate rose further to 3.3% in September 2008, as the economic conditions deteriorated.

Chart 21: Unemployed Residents and Resident Unemployment Rate, 1998 to 2008 (As at June) (Non-Seasonally Adjusted)

Source: Labour Force Survey (LFS), except data for 2000 and 2005 which are from the Census of Population 2000 and General Household Survey (GHS) 2005.

Note: ^a – Adjusted figures for 2007. See footnote 1.

Age

3.2 Residents in their 30s had the lowest unemployment rate (2.9%) in June 2008. In contrast, the rates for younger residents aged 15 to 24 (9.2%) and 25 to 29 (5.4%) were significantly higher than the norm, as many are entering the labour market for the first time and even after starting work, tend to seek more frequent job changes.

**Chart 22: Resident Unemployment Rate by Age, June 2008
(Non-Seasonally Adjusted)**

Education

3.3 Tertiary educated residents generally had lower unemployment rates than less educated groups. However, the rates for graduates with degrees in Fine & Applied Arts, Humanities & Social Sciences, Mass Communication & Information Science and Business & Administration were above the overall average of 4.0% in June 2008.

Chart 23: Resident Unemployment Rate by Educational Attainment and Fields of Study at Degree Level, June 2008 (Non-Seasonally Adjusted)

Note: Breakdown for fields of study pertains to degree holders only.

Previous Occupation

3.4 Lower-skilled workers were more susceptible to unemployment. Specifically, service & sales workers (6.6%), cleaners, labourers & related workers (5.3%) and clerical workers (5.0%) had unemployment rates that were significantly above the norm⁹ (3.6%), with service & sales workers experiencing a notable rise from a year ago (5.4%).

**Chart 24: Resident Unemployment Rate by Occupation*, 2007 and 2008
(As at June) (Non-Seasonally Adjusted)**

- Notes:
- (a) * – For those with previous working experience only.
 - (b) ^ – Includes Agricultural & Fishery Workers and Workers Not Classifiable by Occupation which are not separately reflected.
 - (c) ^a – Adjusted figures for 2007. See footnote 1.

⁹ For those with previous working experience only.

Previous Industry

3.5 The unemployment rate for those previously employed in hotels & restaurants (6.3%), administrative & support services (5.7%), information & communications (4.3%) and wholesale & retail trade (4.1%) were notably higher than those in other industries such as community, social & personal services (2.4%), real estate & leasing services (2.7%) and construction (2.8%).

**Chart 25: Resident Unemployment Rate by Industry*, 2007 and 2008
(As at June) (Non-Seasonally Adjusted)**

- Notes:
- (a) * – For those with previous working experience only.
 - (b) ^ – Includes Agriculture, Fishing, Quarrying, Utilities and Sewerage & Waste Management which are not separately reflected.
 - (c) ^a – Adjusted figures for 2007. See footnote 1.

Duration of Unemployment

3.6 Reflecting the rise in unemployment since the beginning of 2008 after improving to pre-Asian crisis levels in the second half of 2007, the vast majority or three in four unemployed residents had been looking for work for less than 15 weeks in June 2008, up from 71% a year ago. At the other end, about one in eight (12%) or 9,500 unemployed residents had been seeking work for 25 weeks or longer. These long-term unemployed made up 0.5% of the resident labour force in June 2008, slightly lower than 0.6% in June 2007. The median duration of unemployment among resident job seekers was 6 weeks in June 2008, down from 8 weeks a year ago.

Chart 26: Distribution of Unemployed Residents by Duration of Unemployment, 2007 and 2008 (As at June)

Note: ^a – Adjusted figures for 2007. See footnote 1.

3.7 The median duration of unemployment generally rose with age, ranging from 4 weeks for younger job seekers aged below 30 to 10 weeks for older unemployed residents aged 50 & over. Less educated resident job seekers also tend to be unemployed for longer periods than those better educated. At 8 weeks, the median duration of unemployment for residents with secondary or lower qualifications was twice as long compared to the 4 weeks for degree holders.

Chart 27: Median Duration of Unemployment among Unemployed Residents, 2007 and 2008 (As at June)

Note: Adjusted figures for 2007 are the same as the original figures.

Modes of Job Search

3.8 Responding to job advertisements and/or writing to firms remained the most common mode of job search, with 63% of resident job seekers taking these action(s) to look for jobs. This was followed by seeking help from friends or relatives (52%) and using the internet for job search (41%).

3.9 The less educated were more likely to seek help from friends or relatives in their job search than better educated job seekers. In contrast, the use of the internet was the most popular mode of job search among unemployed degree holders.

Table 9: Proportion of Unemployed Residents by Education and Action Taken to Look for Jobs, June 2008

EDUCATIONAL ATTAINMENT	Per Cent					
	Answered advertisements/ wrote to firms	Asked friends or relatives	Used the internet to search for jobs	Registered with employment service or agency	Made preparations to start own business	Others
TOTAL	63.1	52.2	40.5	25.6	7.2	5.3
Below Secondary	58.0	64.4	8.0	15.5	3.4	6.6
Secondary	66.3	58.1	30.0	20.7	6.6	4.2

Polytechnic Diploma	66.8	45.2	65.5	35.1	6.6	4.2
Degree	65.2	38.3	68.8	33.9	12.6	4.4

Note: Respondents can indicate more than one action taken to look for jobs.

Type of Jobs Sought

3.10 The most common occupations sought by unemployed residents were clerical (20%), associate professional & technician (18%), professional (16%) and service & sales jobs (15%). Reflecting their better educated profile, more than half of the younger job seekers aged below 40 were seeking PMET jobs. In contrast, mature unemployed residents were mostly seeking clerical, sales & service or cleaning, labouring & related jobs.

Table 10: Proportion of Unemployed Residents by Type of Jobs Sought and Age, June 2008

					Per Cent
TYPE OF JOBS SOUGHT	Total	Below 30	30 – 39	40 – 49	50 & Over
TOTAL*	100.0	100.0	100.0	100.0	100.0
Managers & Administrators	7.0	2.8	11.4	10.7	6.7
Working Proprietors	2.2	1.0	3.6	3.2	1.9

Service & Sales Workers	14.6	14.9	9.8	15.7	16.9
Production Craftsmen & Related Workers	3.9	1.1	2.2	5.2	8.5
Plant & Machine Operators & Assemblers	8.6	3.8	8.8	11.6	13.4
Cleaners, Labourers & Related Workers	10.1	2.2	3.9	14.7	23.6

Note: * – Includes Agricultural & Fishery Workers and Workers Not Classifiable by Occupation which are not separately reflected in the table.

4 ECONOMICALLY INACTIVE RESIDENTS

4.1 Slightly over one in three (34.4%) or 1,010,500 residents aged 15 & over in June 2008 were neither working nor seeking employment, i.e. they were economically inactive. The incidence of economic inactivity was expectedly higher at the two extreme ends of the age spectrum, with 73% of residents aged 60 & over and 63% of those aged 15 to 24 outside the labour force. The economic inactivity rate falls with educational attainment, reflecting the greater employability of better educated residents and their higher opportunity cost of staying outside the labour force. Consequently, eight in ten economically inactive residents had secondary (26%) or lower (54%) qualifications.

Table 11: Profile of Economically Inactive Residents, June 2008

CHARACTERISTICS	Total			Males			Females		
	Number	Share (%)	Incidence (%)	Number	Share (%)	Incidence (%)	Number	Share (%)	Incidence (%)

AGE GROUP (YEARS)									
15 – 24	306,600	30.3	62.9	158,100	46.0	62.5	148,400	22.3	63.3
25 – 29	26,700	2.6	11.3	7,500	2.2	6.7	19,100	2.9	15.5
30 – 39	75,600	7.5	13.0	5,700	1.7	2.1	69,900	10.5	22.7
40 – 49	106,600	10.5	16.9	9,300	2.7	3.0	97,300	14.6	30.7
50 – 59	141,300	14.0	27.3	27,500	8.0	10.6	113,800	17.1	44.1
60 & Over	353,700	35.0	73.1	135,800	39.5	60.8	218,000	32.7	83.6
EDUCATIONAL ATTAINMENT									
Primary & Below	353,900	35.0	57.5	95,500	27.7	37.9	258,500	38.8	70.9
Lower Secondary	195,300	19.3	48.8	80,000	23.3	37.9	115,300	17.3	60.9
Secondary	261,500	25.9	36.6	95,200	27.7	28.7	166,200	24.9	43.4
Upper Secondary	97,900	9.7	26.4	38,200	11.1	20.1	59,700	9.0	32.9
Polytechnic Diploma	40,400	4.0	14.6	19,800	5.8	12.3	20,700	3.1	17.7
Degree	61,500	6.1	11.0	15,400	4.5	5.3	46,100	6.9	17.3

4.2 Females are generally more likely to be outside the labour force than males in the same age group. Reflecting this difference in economic inactivity rate, the majority of the economically inactive residents in the prime and older age groups were females. In June 2008, 241,400 or 88% of economically inactive residents aged 25 to 54 and 112,700 or 71% of those aged 55 to 64 were females. Reflecting their traditional role as the primary homemaker and care-giver, close to nine in ten (88%) economically inactive women aged 25 to 54 and 70% of those aged 55 to 64 were neither working nor looking for work mainly because of family responsibilities (housework, childcare or care of elderly or sick relatives). Other reasons for economic inactivity among older females aged 55 to 64 include poor health, disability or old age (14%) and retirement (13%).

4.3 Although the vast majority of economically inactive residents were females, there were nevertheless 32,700 economically inactive men in the prime-working age of 25 to 54 and another 45,500 aged 55 to 64 in June 2008, up from 30,200^a and 41,600^a respectively in June 2007. Prime-working age males outside the labour force mostly indicated poor health/disability¹⁰ (40%), full-time studies (17%) and taking a break (14%) as their main reason for economic inactivity. On the other hand, nearly six in ten (59%) economically inactive males aged 55 to 64 cited retirement as their main reason for not working or looking for a job, followed by another 28% who gave poor health, disability or old age as their main reason.

¹⁰ Includes a small number who were economically inactive mainly due to old age.

Table 12: Main Reason for Economic Inactivity by Selected Age Groups and Gender, June 2008

(A) Aged 25 to 54

	Total	Males	Females
Number of Economically Inactive Residents	274,100	32,700	241,400
Main Reason for Economic Inactivity (%)	100.0	100.0	100.0
Housework	54.3	2.2	61.4
Childcare	21.8	2.2	24.5

Retired	1.5	6.9	0.7
Others	3.0	9.1	2.2

Note: * – Includes a small number who were economically inactive mainly due to old age.

(B) Aged 55 to 64

	Total	Males	Females
Number of Economically Inactive Residents	158,200	45,500	112,700
Main Reason for Economic Inactivity (%)	100.0	100.0	100.0
Housework	45.0	0.6	63.0
Retired	26.4	59.4	13.1
Poor Health/Disabled/Too Old	18.3	28.4	14.2
Childcare	3.7	0.4	5.0
Care of Elderly or Sick Relatives	2.2	1.7	2.3
Discouraged	1.6	4.0	0.7
Others	2.8	5.5	1.7

Discouraged Workers

4.4 Some 7,500 economically inactive residents in June 2008 were not looking for work because they believed their job search would be in vain (commonly known as discouraged workers¹¹), forming 0.4% of the resident labour force inclusive of discouraged workers. This was an increase from 5,900^a or 0.3%^a a year ago. The proportion of discouraged workers in the labour force (inclusive of discouraged workers) was higher among the older and less educated.

Table 13: Profile of Resident Discouraged Workers, June 2008

CHARACTERISTICS	Number	As a Percentage of Economically Active (Inclusive of Discouraged Workers)
TOTAL	7,500	0.4
GENDER		
Males	4,300	0.4
Females	3,200	0.4
AGE GROUP (YEARS)		
Below 30	500	0.1
30 – 39	600	0.1
40 – 49	1,500	0.3
50 & Over	4,800	0.9
EDUCATIONAL ATTAINMENT		
Below Secondary	3,600	0.8
Secondary	2,100	0.5
Upper Secondary	700	0.2
Polytechnic Diploma	400	0.2
Degree	800	0.2

Note: Discouraged workers are persons outside of the labour force who are currently not looking for a job because they believe their job search would be in vain. Reasons cited for being discouraged include: (1) Believes no suitable work available; (2) Employers' discrimination (e.g. prefer younger workers) and (3) Lacks necessary qualification, training, skills or experience.

¹¹ Discouraged workers are persons outside of the labour force who are currently not looking for a job because they believe their job search would be in vain. Reasons cited for being discouraged include: (1) Believes no suitable work available; (2) Employers' discrimination (e.g. prefer younger workers) and (3) Lacks necessary qualification, training, skills or experience.

Potential Entrants

4.5 The number and share of economically inactive residents who intend to look for a job within the next two years rose from 139,500^a or 14%^a in 2007 to 149,300 or 15% in 2008. Slightly over three in four (77%) of these potential entrants were aged 25 to 49 (39%) or younger (37%). Reflecting the higher share of females among the economically inactive, two in three (67% or 99,600) resident potential entrants were females.

Table 14: Profile of Resident Potential Entrants* into the Labour Force, June 2008

CHARACTERISTICS	Total		Males		Females	
	Number	Share (%)	Number	Share (%)	Number	Share (%)
TOTAL	149,300	100.0	49,700	100.0	99,600	100.0

PREFERENCE FOR FULL-TIME/ PART-TIME EMPLOYMENT						
Full-Time	83,900	56.2	30,900	62.2	53,000	53.2
Part-Time	65,400	43.8	18,800	37.8	46,600	46.8

Note: * – Potential entrants refer to economically inactive persons who intend to look for a job within the next two years.

4.6 Overall, 56% or 83,900 resident potential entrants in 2008 preferred to work full-time while the remaining 44% or 65,400 preferred part-time employment. Expectedly, the bulk of the male potential entrants in prime-working age groups preferred full-time employment. In contrast, the majority (around two in three) of mature females aged 40 & over and males aged 60 & over preferred to work part-time.

Table 15: Proportion of Resident Potential Entrants* Who Preferred to Work Part-Time by Age Group and Gender, June 2008

AGE GROUP (YEARS)	Total	Males	Females
TOTAL	43.8	37.8	46.8
15 – 24	33.9	38.9	30.5
25 – 29	17.5	6.2	24.5

50 – 59	58.2	41.2	67.5
60 & Over	72.0	66.7	79.6

Note: * – Potential entrants refer to economically inactive persons who intend to look for a job within the next two years.

5 CONCLUDING REMARKS

5.1 Supported by gains in employment rate for females, the proportion of residents in employment reached another new high in June 2008. The employment rate for older residents also increased, amid continuing efforts to enhance their employability. On the other hand, the employment rate for prime-working age men dipped slightly after improving in the last two years, but remained high internationally.

5.2 The dramatic deterioration in economic conditions arising from the global financial turmoil in the last quarter of 2008¹² will pose serious challenges ahead for workers. Unemployment is expected to rise and the labour market will be under strain in 2009.

¹² Preliminary estimates from the Ministry of Trade and Industry show that Singapore's Gross Domestic Product (GDP) in the fourth quarter of 2008 contracted by 3.7% in real terms over the same period in 2007, following a decline of 0.2% in the third quarter. This followed growth of 2.2% in the second quarter and 6.9% in the first quarter of 2008.

PART II

Survey Coverage and Methodology

SURVEY COVERAGE AND METHODOLOGY

INTRODUCTION

The 2008 comprehensive Labour Force Survey is the thirty-first in the series of mid-year labour force surveys conducted in Singapore by the Manpower Research and Statistics Department of the Ministry of Manpower. The survey was not carried out in 1990, 1995, 2000 and 2005 because of the conduct of the General Household Survey (1995 and 2005) and the Population Census (1990 and 2000) by the Singapore Department of Statistics, Ministry of Trade and Industry.

2 The Labour Force Survey is conducted under the Statistics Act (Chapter 317) which empowers the Director of the Manpower Research and Statistics Department to collect data on the economic activities of the population in Singapore. The Act also ensures that individual information obtained from the survey is kept confidential and used only for the purpose of producing aggregate statistics.

OBJECTIVE AND COVERAGE

3 The objective of the survey is to collect data on the economic activities of the population, including detailed information on employment and unemployment, characteristics of the labour force and economically inactive persons.

4 The survey covers private households on the main island of Singapore. It excludes workers living in construction worksites, dormitories and workers' quarters at the workplace and persons commuting from abroad to work in Singapore.

DATA COLLECTED

5 The survey questionnaire was designed to collect pertinent data on the personal characteristics of the population and detailed information on the economic characteristics of the labour force. The items collected in the questionnaire included:

For All Persons

Gender

Age

For Persons Aged Fifteen Years And Over

Marital status

Educational attainment

Field of study

Activity status

For Employed Persons Aged Fifteen Years And Over

Occupation

Industry

Gross monthly income

Employment status

Whether working full-time, part-time or serving National Service

Whether employed on permanent or term contract basis

Usual hours worked

Duration of employment in present job

Willingness and availability of part-timers to work additional hours

For Unemployed Persons Aged Fifteen Years And Over

Duration of unemployment

Action taken to look for work

Working experience

Previous occupation

Previous industry

Reason for leaving previous job

For Economically Inactive Persons Aged Fifteen Years And Over

Reason for being economically inactive

Working experience

Whether persons intend to look for work in future

Preference for full-time or part-time work

CONCEPTS AND DEFINITIONS

6 *Household*

A household is made up of persons who share common accommodation and food arrangements. A household may consist of only one person or many persons.

7 *Reference Period*

This refers to the full calendar week, i.e. Sunday to Saturday preceding the date of the survey interview.

8 *Educational Attainment*

This refers to the highest level or standard which a person has passed or attained either through attendance at an institution of learning or through correspondence or self-study. The classification of educational attainment is based on the Singapore Standard Educational Classification (SSEC), 2000. A person is classified into one of the following categories according to the highest qualification attained:

No Formal Qualification/ Lower Primary	: This refers to those who have never attended school, or have primary education but without Primary School Leaving Examination (PSLE) certificate or their equivalent, or have Certificate in Best 1-3.
Primary	: This refers to those who have PSLE or other certificate of equivalent standard, or have Certificate in Best 4
Lower Secondary	: This refers to those who have secondary education without GCE 'O'/'N' Level pass or equivalent, or have Certificate in Wise 1-3, or basic vocational certificates (incl. ITE Basic vocational training).
Secondary	: This refers to those who have at least 1 GCE 'N'/'O' Level pass, or Technical Certificate at NTC Grade 3 level, Certificate of Competency, Certificate of Vocational training, BCA Builder Certificate, or other certificates/qualifications of equivalent standard.
Upper Secondary	: This refers to those who have at least 1 GCE 'A' Level pass or other certificates/qualifications of equivalent standard. It also includes those who have NITEC, higher NITEC or equivalent (including Certificate of Office Skills, Certificate in Business Skills, Technical Certificate at NTC Grade 2 level, Advanced Builder Certificate), or Master NITEC or equivalent (including Technical Certificate at NTC Grade 1 level, Polytechnic certificates), or other advanced certificates (e.g. SIM Certificates).
Polytechnic Diploma	: This refers to those who have Polytechnic diploma, or Polytechnic advanced diploma (including Polytechnic advanced/post/specialist/management/graduate diploma), or Polytechnic post-diploma certificate.
Other Diploma and Professional Qualification	This refers to those who have qualifications awarded by professional bodies, or National Institute of Education (NIE) Diploma, or other diploma qualifications (e.g. SIM diploma).
Degree	: This refers to those who have Bachelor Degree, or Postgraduate Diploma (including NIE postgraduate diploma), or Masters or Doctorate.

9 *Field of Study*

This refers to the principal discipline, branch or subject matter of study that leads to the award of the highest qualification attained at polytechnic and university levels.

10 *Activity Status*

Persons are classified as economically active or inactive.

Economically Active Population : This refers to persons aged fifteen years and over who were either employed or unemployed during the reference period. This group is also known as the labour force.

Economically Inactive Population : This refers to persons aged fifteen years and over who were not working, did not have a job to return to and were not actively looking for a job during the reference period.

11 *Employed Persons*

This refers to persons aged fifteen years and over who, during the reference period:

- i) worked for one hour or more either for pay, profit or family gains; or
- ii) had a job or business to return to but were temporarily absent because of illness, injury, breakdown of machinery at workplace, labour management dispute or other reasons.

12 *Unemployed Persons*

This refers to persons aged fifteen years and over who did not work but were available for work and were actively looking for a job during the reference period. They include persons who were not working but were taking steps to start their own business or taking up a new job after the reference period.

13 *Unemployment Rate*

This is defined as the percentage of unemployed persons to the total economically active persons aged fifteen years and over.

14 *Long-Term Unemployed Persons*

This refers to persons who have been unemployed for 25 weeks or more.

15 *Long-Term Unemployment Rate*

This is defined as the percentage of long-term unemployed persons to the total economically active persons aged fifteen years and over.

16 *Underemployed Persons*

This refers to persons aged fifteen years and over who are working less than 30 hours a week and are willing and available to engage in additional work.

17 *Underemployment Rate*

This is defined as the percentage of underemployed persons to the total employed persons aged fifteen years and over.

18 *Duration of Unemployment*

This refers to the number of complete weeks between the date when action was first taken to look for a job and the date of the survey interview.

19 *Age-Gender Labour Force Participation Rate*

This is defined as the proportion of population in the specific age and gender group who are economically active.

20 *Age-Gender Specific Employment Rate*

This is defined as the proportion of the population in the specific age and gender group who are employed.

21 *Employment Status*

This refers to the position or status of an employed person in relation to other persons within the organisation for which he worked. Employed persons are divided into the following four categories:

- | | | |
|------|-----------------------------|--|
| i) | Employers | : These are persons who employ at least one paid worker in their business or trade. |
| ii) | Employees | : These are persons who work for employers in return for regular wages or salaries. |
| iii) | Own Account Workers | : These are persons who operate their own business without employing any paid workers in the conduct of their business or trade. |
| iv) | Contributing Family Workers | : These are persons who assist in the operation of family business without receiving regular wages or salaries. |

22 Type of Employment

Employed persons can be categorised into those working on full-time or part-time basis.

- i) Full-time : This refers to employment where the normal hours of work is 30 hours or more in a week.
- ii) Part-time : This refers to employment where the normal hours of work is less than 30 hours a week.

Employees can be categorised into those employed on term contract or permanent basis.

- i) Term Contract : Employees on term contracts refer to those on fixed-term contract of employment that will terminate on the expiry of a specific term unless it is renewed, as well as those on casual/on-call employment (i.e. where persons are employed on ad hoc basis, as and when the company requires additional manpower).
- ii) Permanent : Permanent employees refer to those employed for an unspecified duration, i.e. they are not on term contracts.

23 Occupation

This refers to the type of work performed by a person, which may not necessarily be related to his training, skill or professional qualification. In the case of a person who performs two or more kinds of work, his occupation would refer to the one in which he spent the greatest part of his working time and/or from which he derived the greatest share of his income during the reference period. The classification of occupations is based on the Singapore Standard Occupational Classification (SSOC), 2005.

24 Industry

This refers to the major kind of activity undertaken by the establishment, enterprise, firm or organisation in which the person worked during the reference period. It is related to the principal class of goods produced or services rendered by the organisation.

The classification of industries is based on the Singapore Standard Industrial Classification (SSIC), 2005.

25 *Gross Monthly Income*

This refers to the total amount of income earned from employment during the full calendar month preceding the date of the interview. For employees, this would include wages or salaries, allowances, overtime, commission, tips and bonuses. It would also include the employee's Central Provident Fund contribution but not the employer's contribution for the employee. For employers and own account workers, it refers to the total receipts from sales and services performed less the business expenses incurred.

From the 1996 survey onwards, data on the bonus received during the last 12 months preceding the survey were obtained separately to derive the gross monthly income. This gives better estimates of gross monthly income from employment.

26 *Usual Hours Worked*

This refers to the number of hours that a person usually works in a typical week, regardless of whether he is paid or not. The concept of usual hours of work differs from that of normal hours of work referred to in contractual arrangements. For a person who has just started work during the reference period, usual hours of work refers to the number of hours per week he is expected to work in that job. For a multiple jobholder, it should be aggregated from the hours spent at all the jobs.

27 *Discouraged Workers*

This refers to persons outside of the labour force who are currently not looking for a job because they believe their job search would be in vain. Reasons cited for being discouraged include belief that there is no suitable work available, employers' discrimination and lack of necessary qualifications, training, skills or experience.

28 *Training Participation Rate*

The training participation rate (also known as training incidence rate), is defined as the proportion of residents aged 15 to 64 in the labour force who had engaged in some form of job-related structured training or education activities over the 12-month period ending June. Job-related structured training or education refers to training that is related to a current or future job. It includes classroom training, private lessons, correspondence courses, workshops, seminars, structured on-the-job training (OJT) and apprenticeship training. However, it excludes informal on-the-job training such as watching a video on management skills, observing others perform a task at work, time spent at work learning new tasks and keeping up to date with work-related developments by reading journals/newspapers and informal discussions.

29 *Training Intensity*

Training intensity is defined as the duration of structured training per adult. It is derived by multiplying the training participation rate by average training days per trainee.

30 *Residents*

Residents (also known as locals) refer to Singapore citizens and Permanent Citizens.

SAMPLING DESIGN

31 The sample used for the mid-year Labour Force Survey is selected using a two-stage stratified design. For the determination of an appropriate sample size, studies on the sample estimates and variances were made. Other factors that were taken into consideration were cost, time and manpower resources. The sample selection is undertaken by the Singapore Department of Statistics, Ministry of Trade and Industry, which maintains a National Database on Dwellings in Singapore. The selection is done in accordance with the specified sampling criteria.

32 The sampling units for the first stage consist of sampling divisions demarcated by geographical boundaries (based on URA's planning areas). To improve the efficiency of the sample selection and the quality of the sample, sampling divisions that contain relatively small number of housing units are merged with larger entities to reduce the variation in size of the sampling divisions.

First Stage Sample Selection of Sampling Divisions

33 During the first stage selection, the sampling divisions are stratified into three predominant housing types, namely, 'Public Flats', 'Private Houses and Flats' and 'Others' which include shophouses and attap/zinc-roofed houses. From this, a certain number of sampling divisions are systematically selected. The probability of a particular sampling division being selected is proportionate to the number of housing units in that sampling division.

Second Stage Sample Selection of Individual Houses

34 Within each selected sampling division, the housing units are stratified by the following housing types:

- i) HDB flats and other public flats;
- ii) Condominiums and private flats;
- iii) Landed properties; and
- iv) Others which include shophouses and attap/zinc-roofed houses.

35 For every chosen sampling division, a fixed number of housing units is selected by systematic sampling with a random start. The probability of selection for the housing units is inversely proportionate to the size of the sampling division.

36 This method of two-stage stratified sampling yields an overall equal probability and self-weighting sample. It also ensures good control over the desired sample size.

PLANNING, ORGANISATION, FIELDWORK AND DATA VERIFICATION

37 The Manpower Research and Statistics Department undertook the planning and operation of the survey. These included the preparation of the questionnaire and related documents, survey design, recruitment and training of staff, supervision and control of field work, editing and checking on the completed cases, data verification and compilation.

38 Field operation for the 2008 survey was carried out from 23 May to 31 July 2008. A total of 118 officers comprising 18 permanent staff and 100 temporary interviewers were involved in the survey operation. The majority of the field staff were university undergraduates and polytechnic students as the period of the field operation coincided with their vacation. Each interviewer was equipped with a computer notebook and a telephone with headset. Comprehensive training sessions comprising classroom and role-play were conducted for the field interviewers.

39 The majority of the households completed the survey through telephone or internet. Households that did not respond through these options were enumerated through face-to-face interviews. Under the *Computer Assisted Telephone Interview (CATI)* system, the interviewer would key the information directly into the computer notebook as the interview was being conducted. The use of automatic routing in the *CATI* system ensured that all relevant questions were asked. The system also has an auto-error checking function to prompt interviewers of missing, invalid or inconsistent entries so that these can be corrected on the spot. The information collected was subjected to further editing checks by field supervisors and *CATI* administrators.

40 The work of the interviewers was closely monitored to ensure the quality of the data collection. Supervisors also conducted random field checks by calling up selected households to verify the information collected. The data were subjected to further consistency and verification checks built into the computer system before processing.

RELIABILITY OF DATA

41 The results of the survey were grossed up to the resident population as at June 2008 (compiled by the Singapore Department of Statistics) using multiple estimation factors. Being a sample survey, the results were inevitably subjected to sampling and non-sampling errors.

42 Full coverage of the labour force is achieved by combining data on residents obtained from the survey with foreign workforce data compiled from administrative records.

Sampling Errors

43 In a sample survey, inferences about the target population are drawn from the data collected from the sample. Errors due to extension of the conclusions based on one sample to the entire population are known as sampling errors. The sampling error of an estimate is the difference between the estimated value obtained from a sample and the actual value from the population. Factors influencing the sampling error include the sample size, the sample design, method of estimation, the variability of the population and the characteristics studied.

44 The most common measure of the sampling error of an estimate is its standard error, which is a measure of the variation among the estimates derived from all possible samples. An alternative measure is the relative standard error of an estimate which indicates the standard error relative to the magnitude of the estimate. As a general rule, the smaller the group whose size is estimated or from which an estimate is being derived, the less precise that estimate is.

45 For the 2008 survey, the estimated sampling errors of the main resident labour force estimates were as follows:

	Estimate	Standard Error	Relative Standard Error (%)
Economically Active Residents	1,928,269	6,006	0.31
Employed Residents	1,852,049	6,015	0.32
Unemployed Residents	76,219	1,722	2.26
Economically Inactive Residents	1,010,492	5,387	0.53
Resident Labour Force Participation Rate (%)	65.6	0.16	0.24
Resident Unemployment Rate (%)	4.0	0.09	2.26

46 A sample estimate and an estimate of its standard error can be used to construct an interval that will, at specified levels of confidence, include the actual value. About 68, 95 and 99 per cent of estimates from all possible samples will fall within the interval defined by one, two or three standard errors respectively on either side of the estimate. By statistical convention, the confidence level has been set at 95 per cent.

47 As many sample estimates can be computed from the survey, it would be impractical to estimate the sampling errors for all estimates. A generalised table of sampling errors for the Labour Force Survey based on a simple random sample is presented as follows:

Size of Estimate	Proportion of Total Resident Population (%)	Standard Error	Relative Standard Error (%)	Range of Estimate at 95% Confidence Level
2,000,000	54.90	5,987	0.30	1,988,265 – 2,011,735
1,000,000	27.45	5,370	0.54	989,475 – 1,010,525
500,000	13.73	4,141	0.83	491,884 – 508,116
200,000	5.49	2,741	1.37	194,628 – 205,372
100,000	2.75	1,966	1.97	96,147 – 103,853
50,000	1.37	1,400	2.80	47,256 – 52,744
20,000	0.55	889	4.45	18,257 – 21,743
10,000	0.27	630	6.30	8,766 – 11,234
5,000	0.14	445	8.91	4,127 – 5,873
2,000	0.05	282	14.09	1,448 – 2,552
1,000	0.03	199	19.93	609 – 1,391
500	0.01	141	28.19	224 – 776
200	0.01	89	44.58	25 – 375

48 Data users are advised to take cognizance of the sampling error of the estimate and exercise judgement on whether the estimate is reliable for their intended purpose. Specifically, caution is to be exercised in interpreting results of detailed cross-tabulations for small sub-groups as these could have large sampling errors.

Non-Sampling Errors

49 Non-sampling errors could result from the varying interpretation of questions by respondents and interviewers, inability or unwillingness of respondents to provide correct information, mistakes in recording, coding and processing. These errors have been minimised by careful design of the questionnaire, intensive training and supervision of interviewers, as well as strict data processing controls.

RESPONSE

50 Of the 33,000 housing units selected in the initial sample, 1,617 households were excluded from the survey as they were unoccupied, non-residential or demolished. A total of 28,313 households responded to the survey, achieving an overall response rate of 90.2%.

IMPACT OF POPULATION REVISION ON LABOUR FORCE DATA

51 Being a sample survey, data obtained from the Labour Force Survey are grossed up using population estimates from Singapore Department of Statistics (DOS). DOS has refined the resident population estimates for June 2008 to exclude Singapore residents who have been away from Singapore for a continuous period of 12 months or longer. Prior to June 2008, the labour force data are grossed up using DOS's original resident population estimates which comprise all persons whose usual residence is in Singapore. Hence, the resident labour force data in 2008 are not strictly comparable with those published in earlier years.

52 To facilitate comparison with 2008, adjusted labour force estimates for 2007 based on the revised population estimates are published, alongside the original estimates in the key time series tabulations. The adjustment assumes that the proportion of persons overseas for at least 12 months in the 2007 Labour Force Survey was the same as that in the 2008 survey. Adjusted data for 2007 are denoted by the symbol ^a. The impact of the population revision is more significant for level data of large estimates such as the resident labour force or employed residents and less so for rates and proportions derived from level data of the same year as shown below.

	June 2007	June 2007 (adjusted)	Difference
	(a)	(b)	(b) - (a)
Economically Active Residents	1,918,100	1,878,000	-40,100
Employed Residents	1,842,100	1,803,200	-38,900
Unemployed Residents	76,100	74,800	-1,300
Economically Inactive Residents	1,026,500	1,009,200	-17,300
Resident Labour Force Participation Rate (%)	65.1	65.0	-0.1
Resident Unemployment Rate (%)	4.0	4.0	0.0
Resident Employment Rate of Population Aged 25-64 (%)	76.5	76.5	0.0

53 A suggested method to compute the change in the size of labour force over a period which spans 2007 is illustrated in the worked example below.

Example: Suppose we want to compute the change in the number of economically active residents from 1998 to 2008. With the break in series in 2007, we can estimate the change as follows:

<u>Year</u>	<u>Number of Economically Active Residents</u>
1998	1,546,500
2007 (Original)	1,918,100
2007 (Adjusted)	1,878,000
2008	1,928,300

The change from 1998 to 2008 can be computed by adding the following two components:

- Change from 1998 to 2007, based on original 2007 figures:
(1,918,100 – 1,546,500 = 371,600)
- Change from 2007 to 2008, based on adjusted 2007 figures:
(1,928,300 – 1,878,000 = 50,300)

Therefore, the change in number of economically active residents from 1998 to 2008 = 371,600 + 50,300 = 421,900

54 The method used for computing the change in level based on different start and end year is summarised as follows.

COMPUTATION OF CHANGE IN LEVEL OF LABOUR FORCE ESTIMATES

Start Year	End Year	Method for Computing Change
Earlier than 2007	Later than 2007	[End year level – 2007 (adjusted) level] + [2007 (original) level – start year level]
Earlier than 2007	2007	2007 (original) level - start year level
2007	Later than 2007	End year level – 2007 (adjusted) level
Earlier than 2007	Earlier than 2007	End year level – start year level
Later than 2007	Later than 2007	End year level – start year level

MARCH, SEPTEMBER AND DECEMBER SURVEYS

55 Since 1986, the Labour Force Survey is also conducted in March, September and December of each year mainly to obtain estimates of the unemployment rate. The March, September and December surveys effectively cover at least 6,000 households each.

LABOUR FORCE SURVEY SUPPLEMENT ON TRAINING, 2008

56 A Labour Force Survey Supplement on Training, 2008 was conducted from 8 August to 8 September 2008 following the close of the fieldwork for the mid-year Labour Force Survey. The Survey aimed to capture information on participation in job-related structured training by the resident labour force during the 12-month period ending June 2008. It also sought to identify the duration of training and training outcomes. The survey supplement covered a total of about 5,000 economically active residents aged 15 to 64 years (excluding full-time National Servicemen) randomly selected from the mid-year *Labour Force Survey, 2008*, of whom 4,504 or 92.5% responded.

PART III

Statistical Tables

TABLE 1
LABOUR FORCE, EMPLOYED, UNEMPLOYED AND UNEMPLOYMENT RATE, 1991 - 2008
 (As At June)

Mid-Year	Labour Force ('000)		Employed ('000)		Unemployed ('000)		Unemployment Rate (Seasonally Adjusted) (%)		Unemployment Rate (Non-Seasonally Adjusted) (%)	
	Total	Residents	Total	Residents	Total	Residents	Total	Residents	Total	Residents
1991	1,673.7	1,372.9	1,645.0	1,345.0	28.7	28.0	na	na	1.7	2.0
1992	1,733.6	1,409.9	1,692.1	1,369.8	41.5	40.1	1.8	2.1	2.4	2.8
1993	1,762.7	1,421.7	1,721.1	1,381.6	41.6	40.2	1.8	2.1	2.4	2.8
1994	1,842.2	1,456.1	1,801.2	1,416.1	41.0	40.0	1.7	2.0	2.2	2.7
1996	2,024.9	1,511.5	1,976.4	1,464.8	48.5	46.7	1.8	2.3	2.4	3.1
1997	2,116.0	1,538.3	2,075.8	1,499.8	40.2	38.5	1.4	1.9	1.9	2.5
1998	2,187.9	1,546.5	2,133.8	1,493.8	54.1	52.6	1.9	2.6	2.5	3.4
1999	2,208.7	1,595.9	2,129.3	1,518.3	79.4	77.5	2.8	3.7	3.6	4.9
2001	2,330.5	1,644.3	2,267.3	1,582.5	63.2	61.9	2.2	3.0	2.7	3.8
2002	2,320.6	1,667.9	2,223.2	1,573.7	97.4	94.2	3.4	4.5	4.2	5.6
2003	2,312.3	1,706.4	2,208.1	1,605.4	104.2	101.0	3.6	4.7	4.5	5.9
2004	2,341.9	1,733.4	2,238.1	1,632.1	103.8	101.3	3.6	4.6	4.4	5.8
2006	2,594.1	1,880.8	2,505.8	1,796.7	88.3	84.2	2.7	3.5	3.4	4.5
2007	2,750.5	1,918.1	2,670.8	1,842.1	79.7	76.1	2.3	3.1	2.9	4.0
2007 ^a	2,710.3	1,878.0	2,631.9	1,803.2	78.4	74.8	2.3	3.1	2.9	4.0
2008	2,939.9	1,928.3	2,858.1	1,852.0	81.8	76.2	2.2	3.1	2.8	4.0

Data for 1995, 2000 and 2005 are not available as the Labour Force Survey was not conducted in these years due to the conduct of the Census and General Household Survey by Department of Statistics, Ministry of Trade and Industry.

To facilitate comparison with 2008, the 2007 Labour Force Survey (LFS) data have been adjusted based on Singapore Department of Statistics' revised population estimates (released in February 2008) which exclude Singapore residents who have been away from Singapore for a continuous period of 12 months or longer. Adjusted data for 2007 are denoted by the symbol ^a. Details are in the section on Survey Coverage and Methodology.

TABLE 2
KEY CHARACTERISTICS OF RESIDENT LABOUR FORCE, 1991 - 2008
 (As At June)

Mid-Year	Labour Force Participation Rate (%)			Median Age of Labour Force (Years)			Employment Rate (%) (Aged 25 - 64)			Median Gross Monthly Income from Work* (Full - Time) (\$)		
	Total	Males	Females	Total	Males	Females	Total	Males	Females	Total	Males	Females
1991	63.7	79.4	48.0	34.0	35.0	32.0	70.9	90.9	50.8	na	na	na

Data for 1995, 2000 and 2005 are not available as the Labour Force Survey was not conducted in these years due to the conduct of the Census and General Household Survey by Department of Statistics, Ministry of Trade and Industry.

To facilitate comparison with 2008, the 2007 Labour Force Survey (LFS) data have been adjusted based on Singapore Department of Statistics' revised population estimates (released in February 2008) which exclude Singapore residents who have been away from Singapore for a continuous period of 12 months or longer. Adjusted data for 2007 are denoted by the symbol ^a. Details are in the section on Survey Coverage and Methodology.

* The unemployed figures refer to the percentage of population who are unemployed. This is different from the unemployment rate, which is expressed as a percentage of the labour force.

Data for 1995, 2000 and 2005 are not available as the Labour Force Survey was not conducted in these years due to the conduct of the Census and General Household Survey by Department of Statistics, Ministry of Trade and Industry.

To facilitate comparison with 2008, the 2007 Labour Force Survey (LFS) data have been adjusted based on Singapore Department of Statistics' revised population estimates (released in February 2008) which exclude Singapore residents who have been away from Singapore for a continuous period of 12 months or longer. Adjusted data for 2007 are denoted by the symbol ^a. Details are in the section on Survey Coverage and Methodology.

Data for 1995, 2000 and 2005 are not available as the Labour Force Survey was not conducted in these years due to the conduct of the Census and General Household Survey by Department of Statistics, Ministry of Trade and Industry.

To facilitate comparison with 2008, the 2007 Labour Force Survey (LFS) data have been adjusted based on Singapore Department of Statistics' revised population estimates (released in February 2008) which exclude Singapore residents who have been away from Singapore for a continuous period of 12 months or longer. Adjusted data for 2007 are denoted by the symbol^a. Details are in the section on Survey Coverage and Methodology.

Data for 2000 and 2005 are not available as the Labour Force Survey was not conducted in these years due to the conduct of the Census and General Household Survey by Department of Statistics, Ministry of Trade and Industry.

To facilitate comparison with 2008, the 2007 Labour Force Survey (LFS) data have been adjusted based on Singapore Department of Statistics' revised population estimates (released in February 2008) which exclude Singapore residents who have been away from Singapore for a continuous period of 12 months or longer. Adjusted data for 2007 are denoted by the symbol^a. Details are in the section on Survey Coverage and Methodology.

Married	357.5	365.7	394.5	391.7	402.4	411.7	459.7	481.8	469.1	494.8
Widowed / Divorced	35.2	39.4	45.1	42.4	42.6	48.3	58.4	59.3	58.5	61.5

Data for 2000 and 2005 are not available as the Labour Force Survey was not conducted in these years due to the conduct of the Census and General Household Survey by Department of Statistics, Ministry of Trade and Industry.

To facilitate comparison with 2008, the 2007 Labour Force Survey (LFS) data have been adjusted based on Singapore Department of Statistics' revised population estimates (released in February 2008) which exclude Singapore residents who have been away from Singapore for a continuous period of 12 months or longer. Adjusted data for 2007 are denoted by the symbol ^a. Details are in the section on Survey Coverage and Methodology.

Data for 2000 and 2005 are not available as the Labour Force Survey was not conducted in these years due to the conduct of the Census and General Household Survey by Department of Statistics, Ministry of Trade and Industry.

To facilitate comparison with 2008, the 2007 Labour Force Survey (LFS) data have been adjusted based on Singapore Department of Statistics' revised population estimates (released in February 2008) which exclude Singapore residents who have been away from Singapore for a continuous period of 12 months or longer. Adjusted data for 2007 are denoted by the symbol^a. Details are in the section on Survey Coverage and Methodology.

50 & Over	1.5	3.0	2.2	4.6	4.5	5.0	6.0	5.7	5.6	5.5

Data for 2000 and 2005 are not available as the Labour Force Survey was not conducted in these years due to the conduct of the Census and General Household Survey by Department of Statistics, Ministry of Trade and Industry.

To facilitate comparison with 2008, the 2007 Labour Force Survey (LFS) data have been adjusted based on Singapore Department of Statistics' revised population estimates (released in February 2008) which exclude Singapore residents who have been away from Singapore for a continuous period of 12 months or longer. Adjusted data for 2007 are denoted by the symbol ^a. Details are in the section on Survey Coverage and Methodology.

Data for 2000 and 2005 are not available as the Labour Force Survey was not conducted in these years due to the conduct of the Census and General Household Survey by Department of Statistics, Ministry of Trade and Industry.

To facilitate comparison with 2008, the 2007 Labour Force Survey (LFS) data have been adjusted based on Singapore Department of Statistics' revised population estimates (released in February 2008) which exclude Singapore residents who have been away from Singapore for a continuous period of 12 months or longer. Adjusted data for 2007 are denoted by the symbol ^a. Details are in the section on Survey Coverage and Methodology.

Data for 2000 and 2005 are not available as the Labour Force Survey was not conducted in these years due to the conduct of the Census and General Household Survey by Department of Statistics, Ministry of Trade and Industry.

To facilitate comparison with 2008, the 2007 Labour Force Survey (LFS) data have been adjusted based on Singapore Department of Statistics' revised population estimates (released in February 2008) which exclude Singapore residents who have been away from Singapore for a continuous period of 12 months or longer. Adjusted data for 2007 are denoted by the symbol ^a. Details are in the section on Survey Coverage and Methodology.

FEEDBACK FORM

1. How useful is the *Report on Labour Force in Singapore* to you?

☐

Very Useful

☐

Useful

☐

Not Useful

2. How do you make use of the data in the Report?

3. How do you find the section on Survey Findings?

☐

Too detailed

☐

Just right

☐

Too brief

☐

Not necessary

4. Does the contents generally meet your needs?

☐

Yes

☐

No

5. What additional information (if any) would you like us to include in our future issues?

6. Any other comments or suggestions you wish to bring to our attention?

Thank you for your valuable feedback

Report on Labour Force in Singapore, 2008

Date of Release: 30 Jan 2009

This publication presents a comprehensive range of statistical information on the economic activities of the population, including detailed analysis and data on employment, unemployment, characteristics of the labour force and economically inactive persons. It also examines a wide range of topics including training, term contract employment, hours worked and types of jobs sought. The information would be useful to policy makers, researchers and the community-at-large who have an interest in the world of work and the lives of workers.

Employment Situation, Fourth Quarter 2008

Date of Release: 30 Jan 2009

This quarterly release analyses the labour market situation. Topics covered include employment, unemployment & retrenchments.
