MISSION

*To provide timely and reliable
national statistical information on the labour market
to facilitate informed decision-making within the government and community-at-large*

Statistical activities conducted by the Manpower Research and Statistics Department are governed by the provisions of the Statistics Act (Chapter 317). The Act guarantees the confidentiality of information collected from individuals and companies. It spells out the legislative authority and responsibility of the Director, Manpower Research and Statistics Department. The Statistics Act is available in the Singapore Department of Statistics website at www.singstat.gov.sg.

PREFACE

The comprehensive Labour Force Survey of Singapore was introduced in 1974 to provide reliable and timely statistical information on the labour market. The survey is designed to capture a wide range of data on the economic activities of the population, including detailed information on employment, unemployment and the characteristics of the labour force and economically inactive persons. Starting from 2001, a Labour Force Survey Supplement on Training has also been conducted to capture information on the incidence and intensity of training by the Singapore labour force.

The report is divided into three parts. The first part analyses the key trends and structure of the labour force. The second part on survey methodology describes the objective, coverage, concepts and definitions, sampling design and reliability of data as well as other operational aspects of the survey. A total of 95 statistical tables are included in the third part of the report.

We hope this Report will meet the needs of users for up-to-date and comprehensive labour force data. The contents and presentation of the Report are reviewed regularly. We welcome readers' feedback to help us improve the Report. A "Feedback Form" page is enclosed at the end of the publication for readers' use.

We wish to thank the survey respondents for their co-operation in the survey. We are also grateful to the Singapore Department of Statistics for providing the household sample for the survey.

Unemployment Rate (%)			
Seasonally Adjusted ⁴	3.0	3.1	3.0
Non-Seasonally Adjusted	3.8	4.1	3.9

Notes:

1) Data on training pertain to resident workforce aged 15 to 64 and refer to job-related structured training undertaken over the 12-month period ending June of the year.

2) 'Production & Transport Operators, Cleaners & Labourers' includes Agricultural & Fishery Workers and Workers Not Classifiable by Occupation.

3) Data on median gross monthly income from work exclude full-time National Servicemen. Before 2009, full-time employment refers to employment where the normal hours of work is at least 30 hours per week. From 2009 onwards, it refers to employment where the normal hours of work is at least 35 hours per week.

4) The seasonally adjusted unemployment figures are subject to annual revisions when the latest set of seasonal factors is updated, taking into account observations for the latest available year. Users are advised to check our website, www.mom.gov.sg/statistics-publications, for the most up-to-date data.

PART I

Survey Findings

HIGHLIGHTS

ON LABOUR FORCE, 2011

- Growth in Singapore's labour force moderated in 2011, reflecting the absolute decline in number of permanent residents (PRs) in the population.¹ The total labour force increased over the year by 3.2% in 2011 to reach 3.24 million, slightly slower than the annual growth of 3.5% in 2010 and over the decade.
- The resident labour force participation rate stabilised in 2011, after trending upwards gradually over time. 66.1% of the resident population aged 15 & over were either working or actively seeking work in 2011, similar to the record 66.2% in 2010 and higher than 64.4% in 2001.
- Reflecting both the stable high in labour force participation rate and a lower unemployment rate,² 78.0% of the resident population aged 25 to 64 were employed in 2011 – surpassing the previous high of 77.1% in 2010.
- The employment rate for older residents made good progress. A record 61.2% of residents aged 55 to 64 were working in 2011, up from 59.0% a year ago. The employment rate for both males (from 75.0% to 76.4%) and females (from 43.4% to 46.3%) in this age group rose to new highs in 2011.
- Nominal incomes rose strongly in 2011, amid a tighter labour market. The median monthly income from work (including employer CPF contributions) of full-time employed residents rose by 8.3% over the year to \$3,249 in 2011, after growing by 2.5% in 2010. Taking inflation into account, the median income rose in real terms by 2.9% in 2011, after a slight dip of 0.3% in 2010. Excluding employer CPF contributions, growth in income also accelerated in 2011, though by a slightly lower rate at 8.0% (nominal) and 2.6% (real). The adjustment for inflation is made using the Consumer Price Index (CPI) covering all items, including imputed rentals on owner-occupied accommodation (which do not involve actual expenditures by households). Excluding the latter, the real median income of full-time employed residents grew over the year by 3.9% (including employer CPF contributions) and 3.6% (excluding employer CPF contributions) in 2011.

¹ Amid the tightened immigration framework, the number of PRs in the population fell by 1.7% over the year in June 2011, after growing 1.5% in 2010 and 11.5% in 2009. Source: Singapore Department of Statistics (2011), *Population Trends 2011*.

² The resident unemployment rate decreased to a non-seasonally adjusted 3.9% in June 2011 from 4.1% in June 2010 and 5.9% in June 2009.

SURVEY FINDINGS

1 Labour Force

Slower labour force growth, pulled down by permanent residents

1.1 Growth in Singapore's labour force moderated in 2011, reflecting the absolute decline in number of permanent residents (PRs) in the population.¹ The pool of economically active residents increased over the year by 1.6% in June 2011, lower than the growth of 3.1% in 2010 and the average of 2.6% p.a. from 2001 to 2011. Amid strong manpower demand, the non-resident labour force grew by 6.3% in 2011, up from the growth of 4.2% in 2010. Consequently, the total labour force increased over the year by 3.2% in 2011 to reach 3.24 million. This was slightly slower than the annual growth of 3.5% in 2010 and over the decade.

Table 1: Labour Force, 2001, 2006 and 2009 to 2011 (As at June)

Residential Status	Number					Change (% p.a.)				
	2001	2006	2009	2010	2011	2001-2011*	2001-2006	2006-2011*	2009-2010	2010-2011
Total	2,330,500	2,594,100	3,030,000	3,135,900	3,237,100	3.5	2.2	4.8	3.5	3.2
Residents	1,644,300	1,880,800	1,985,700	2,047,300	2,080,100	2.6	2.7	2.5	3.1	1.6
Non-Residents	686,200	713,200	1,044,300	1,088,600	1,157,000	5.4	0.8	10.2	4.2	6.3

- Notes: (1) Numbers are rounded to the nearest hundred. Hence, they may not add up.
 (2) * – The growth rates are adjusted for the change in the definition of resident population estimates by Singapore Department of Statistics (released in February 2008) to exclude residents who have been away from Singapore for a continuous period of 12 months or longer. The figures were computed based on two sub-periods, 2001/2006 to 2007 (based on old definition) and 2007 to 2011 (based on new definition).

¹ Amid the tightened immigration framework, the number of PRs in the population fell by 1.7% over the year in June 2011, after growing 1.5% in 2010 and 11.5% in 2009. Source: Singapore Department of Statistics (2011), *Population Trends 2011*.

Labour Force Participation

1.2 The resident labour force participation rate (LFPR) stabilised in 2011, after trending upwards gradually over time. 66.1% of the resident population aged 15 & over were either working or actively seeking work in 2011, similar to the record 66.2% in 2010 and higher than 64.4% in 2001.

1.3 The increase in resident LFPR over the decade was mainly driven by older residents and females in the prime-working ages, supported by efforts to enhance the employability of older persons and improvement in the educational profile of women.² The LFPR for older residents aged 55 to 64 rose from 45.6% in 2001 to 63.4% in 2011, while that for women aged 25 to 54 increased from 65.4% to 75.7%. This outweighed the dampening effect of ageing on the overall resident LFPR and the delay in entry of youths aged 15 to 24 to the labour market as they pursued higher education.

Chart 1: Age-Sex Specific Resident Labour Force Participation Rate, 2001 and 2011 (As at June)

² Better-educated women were more likely to participate in the labour market than the less educated. Although the educational profile of men also improved, this has less of a positive impact on LFPR than for women, given men's traditional role as the main breadwinner across the educational levels.

Profile of the Labour Force

Age

1.4 The resident labour force continued to age, as more post-war baby boomers crossed into older age groups and a higher proportion of older residents were participating in the labour market than before. Three in ten (30%) residents in the labour force in 2011 were aged 50 & over, up from less than two in ten (18%) in 2001. Conversely, the share of economically active residents in their 30s declined over the decade from 30% to 25% and those younger from 24% to 20%. Consequently, the median age of residents in the labour force increased from 38 years in 2001 to 42 years in 2011.

Chart 2: Distribution of Resident Labour Force by Age, 2001 and 2011 (As at June)

Note: Data for each year may not add up to 100% due to rounding.

Education

1.5 The educational profile of residents in the labour force continued to improve, as the better educated younger cohorts entered the labour force and the less educated older cohorts retired over time. Close to three in ten (28%) residents in the labour force in 2011 were degree holders, up from 17% in 2001. Including those with diploma & professional qualifications, the share was 47% in 2011 compared with 30% in 2001.

Chart 3: Distribution of Resident Labour Force by Education, 2001 and 2011 (As at June)

Note: Data for each year may not add up to 100% due to rounding.

1.6 The improvement in educational profile was observed across all age groups. Younger residents continued to have a stronger educational profile than those older.³ Close to five in ten residents aged 25 to 29 (46%) and 30 to 39 (47%) in the labour force were degree holders in 2011, compared with three in ten (29%) for residents in their 40s and around one in ten for those older (12% for residents aged 50 to 59 and 8.1% for those aged 60 & over).

³ The exception was for youths aged 15 to 24, where many of them would still be pursuing higher education and have not entered the labour market yet.

Chart 4: Distribution of Resident Labour Force by Education and Age, 2001 and 2011 (As at June)

Note: Data for each year/age group may not add up to 100% due to rounding.

1.7 Around one in three (32%) degree holders in the resident labour force in 2011 obtained their highest qualification in Business & Administration. Other common fields of study were Engineering Sciences (22%), Humanities & Social Sciences and Information Technology (both 11%). There were more economically active degree holders from all major disciplines in 2011 than a decade ago, with faster growth rates for Education (18% p.a.), Fine & Applied Arts (13% p.a.) (relative to their low base) and Information Technology (12% p.a.).

Table 2: Economically Active Resident Degree Holders by Field of Study, 2001 and 2011 (As at June)

Field of Study	2001		2011		Annualised Change (% p.a.)*
	Number	Distribution (%)	Number	Distribution (%)	
Total	278,800	100.0	589,200	100.0	8.2
Business & Administration	89,300	32.0	191,400	32.5	8.3
Engineering Sciences	64,400	23.1	130,000	22.1	7.8
Humanities & Social Sciences	36,600	13.1	65,100	11.0	6.2
Information Technology	21,500	7.7	64,800	11.0	12.2
Natural, Physical, Chemical & Mathematical Sciences	25,700	9.2	36,900	6.3	4.1
Health Sciences	11,700	4.2	27,300	4.6	9.2
Education	3,800	1.3	18,700	3.2	17.6
Architecture & Building	8,800	3.2	18,000	3.0	7.8
Mass Communication & Information Science	6,000	2.1	11,800	2.0	7.4
Fine & Applied Arts	3,100	1.1	10,100	1.7	12.9
Law	6,800	2.4	8,900	1.5	3.1
Others	1,200	0.4	6,200	1.1	18.9

Notes: (1) Data on number and distribution may not add up to the total due to rounding.

(2) * – The growth rates are adjusted for the change in the definition of resident population estimates by Singapore Department of Statistics (released in February 2008) to exclude residents who have been away from Singapore for a continuous period of 12 months or longer. The figures were computed based on two sub-periods, 2001 to 2007 (based on old definition) and 2007 to 2011 (based on new definition).

Training

1.8 Training participation fell in 2011, amid the tighter labour market and the completion of the Skills Programme for Upgrading and Resilience (SPUR).⁴ 27% of residents aged 15 to 64 in the labour force participated in job-related structured training during the 12-month period ending June 2011.⁵ This was down from 29% a year ago but still higher than the trough of 25% in 2004. Coupled with a fall over the year in average (mean) training duration from 17 to 16 days per trainee, the training intensity, derived by multiplying the average training days per trainee with the training participation rate, declined from 4.9 to 4.3 training days per adult in 2011.

⁴ SPUR is a two-year enhanced funding scheme implemented to help companies cut costs and save jobs, and help workers upgrade their skills during the 2008/09 economic downturn. Under SPUR, there was enhanced support for course fees subsidies and higher absentee payroll for workers sent for training at approved SPUR training providers. With the economic recovery in 2010, SPUR ceased in November 2010.

⁵ Data pertain only to those in the labour force; and thus do not capture the training participation and training experience of the economically inactive.

1.9 The fall in overall training participation mirrored the decline in training incidence among the employed (from 29% in 2010 to 27% in 2011) as employers could have scaled back on staff training to address immediate labour shortfalls. The unemployed also saw its training participation decline (from 19% in 2010 to 16% in 2011) after four consecutive years of improvement. Although lagging the employed in training participation, the unemployed trainees clocked in more days at training, resulting in a higher training intensity (9.1 days per adult) than that of the employed (4.1 days per adult).

Chart 5: Training Indicators of Economically Active Residents Aged 15 to 64 by Economic Activity Status

- Notes: (1) Training participation rate is defined as the proportion of residents aged 15 to 64 in the labour force who had engaged in some form of job-related structured training or education activities over the 12-month period ending June.
- (2) Training intensity is measured by the duration of training per adult, derived by multiplying the training participation rate with the average training days per trainee.

1.10 Training participation continued to decline with age. 39% of residents in their 20s underwent training, compared with 17% for those aged 50 to 64. The younger also chalked up more days at training, thereby widening the differential in training intensity by age. On average, the training intensity of younger residents in their 20s was 10.2 days per adult, substantially higher than the 1.4 days for older residents aged 50 to 64.

Chart 6: Training Indicators of Economically Active Residents Aged 15 to 64 by Age

1.11 The better educated participated more actively in training than those less educated. Nearly four in ten (39%) residents with degrees underwent training, compared with only one in ten (10%) for those with below secondary education. Compared with a year ago, those with below secondary qualification experienced a larger decrease in training participation (-5.5%-points) than other education groups (-3.0 to -0.7%-points), thus widening the differential among them. The training intensity per adult ranged from 0.6 day for those without secondary qualification to 6.8 days for degree holders.

1.12 As with previous years, professionals, managers, executives & technicians (PMETs) (35%) had a higher training incidence than clerical, sales & service workers (22%) and production & transport operators, cleaners and labourers (13%). PMETs and clerical, sales & service workers also spent more time on training than production & transport operators, cleaners and labourers.

Chart 7: Training Indicators of Economically Active Residents Aged 15 to 64 by Education

Chart 8: Training Indicators of Employed Residents Aged 15 to 64 by Broad Occupational Group

Note: ^ – Includes Agricultural & Fishery Workers and Workers Not Classifiable by Occupation which are not separately reflected.

1.13 Reflecting the knowledge and skills required in their area of work, professionals (44%) and associate professionals & technicians (36%) were more likely to participate in training and had above-average training intensity. On the other hand, working proprietors (7.2%), plant & machine operators & assemblers (11%) and cleaners, labourers & related workers (14%) were less involved in training. Correspondingly, their training intensity averaged less than one day per adult.

Chart 9: Training Indicators of Employed Residents Aged 15 to 64 by Occupation, 2011

Note: ^ – Includes Agricultural & Fishery Workers and Workers Not Classifiable by Occupation which are not separately reflected.

1.14 About three to four in ten residents employed in financial & insurance services (40%), community, social & personal services (38%), real estate services (35%) and professional services (30%) participated in training, higher than the overall average training incidence (27%). Conversely, training participation was less prevalent among those working in industries with a greater reliance on the lower-skilled or seasonal workers. These included administrative & support services (14%), construction (17%) and accommodation & food services (18%).

Chart 10: Training Indicators of Employed Residents Aged 15 to 64 by Industry, 2011

Note: ^ – Includes Agriculture, Fishing, Quarrying, Utilities and Sewerage & Waste Management which are not separately reflected.

1.15 Reflecting their greater labour market engagement, full-timers (28%) continued to have a higher training incidence than part-timers (19%). In terms of training intensity, full-timers clocked 4.1 days per adult and part-timers, 1.4 days in 2011.

Chart 11: Training Indicators of Employed Residents Aged 15 to 64 by Nature of Employment

1.16 The majority of employed trainees felt that the training they had undertaken in the year ending June 2011 had enhanced their workforce skills and performance as well as their personal development. They were more productive on the job (64%), able to deliver better service (62%), and developed new job-related skills (57%). Majority also found the training interesting (57%) and were encouraged to do further training (55%).

1.17 A significant proportion indicated that the training made them more employable (50%) and gave them job satisfaction (45%). Nearly four in ten (39%) were given additional/new responsibilities arising from the training. A smaller proportion of trainees reported receiving a pay rise (12%) and promotion (8.8%) that was related to the training they undertook in the year. This is not surprising given that the impact of training on pay and promotion may not be immediate. Only a handful felt that they did not apply the skills/knowledge on the job (3.1%) or were dissatisfied with the training they received (1.8%).

Chart 12: Training Outcomes of Employed Residents Aged 15 to 64, 2011

- Notes: (1) Figures are based on employed trainees aged 15 to 64.
(2) Respondents can indicate more than one training outcome.

2 Employment

Employment rate reached another new high, while income rose strongly amid a tighter labour market

2.1 Reflecting both the stable high in LFPR and a lower unemployment rate, 78.0% of the resident population aged 25 to 64 were employed in 2011 – surpassing the previous high of 77.1% in 2010.

Chart 13: Distribution of Resident Population Aged 25 to 64 by Economic Activity Status, 2001 to 2011 (As at June) (Non-Seasonally Adjusted)

Source: Comprehensive Labour Force Survey (LFS), except 2005 data which are from the General Household Survey (GHS) 2005.

- Notes:
- (1) Data from GHS may not be strictly comparable with LFS as there are some differences in the survey period. GHS was conducted from March/April to August/September whereas LFS was from May to July.
 - (2) The unemployed figures above refer to the unemployed as a percentage of population. This is different from the unemployment rate, which is expressed as a percentage of the labour force.
 - (3) To facilitate comparison with data for 2008 onwards, the 2007 data have been adjusted based on Singapore Department of Statistics' revised population estimates (released in February 2008) which exclude Singapore residents who have been away from Singapore for a continuous period of 12 months or longer. For data in this chart, adjusted figures for 2007 are the same as the original figures.
 - (4) Data for each year may not add up to 100% due to rounding.

2.2 The employment rate for older residents made good progress. A record 61.2% of residents aged 55 to 64 were working in 2011, up from 59.0% a year ago. The employment rate for both males (from 75.0% to 76.4%) and females (from 43.4% to 46.3%) in this age group rose to new highs in 2011.

2.3 The employment rate for women in the prime-working ages of 25 to 54 also rose to another high from 71.7% in 2010 to 73.0% in 2011. Prime-working age men experienced a modest increase from 92.4% to 92.6%, still lower than the pre-recession high of 93.3% in 2007 and 93.0% a decade ago. Nevertheless, Singapore's rate remained above the levels in the other Asian NIEs and the advanced economies.⁶

Chart 14: Resident Employment Rate by Selected Age Groups and Sex, 2001 to 2011 (As at June) (Non-Seasonally Adjusted)

⁶ The employment rate of men aged 25 to 54 was 85.7% in Taiwan, 86.8% in South Korea, 90.3% in Hong Kong, 81.0% in US, 85.3% in UK and 84.7% for OECD average in 2010. Source: Based on data from national statistical agencies and OECD Stat Extracts website.

(B) Aged 55 to 64

Source: Comprehensive Labour Force Survey (LFS), except 2005 data which are from the General Household Survey (GHS) 2005.

Notes: (1) Data from GHS may not be strictly comparable with LFS as there are some differences in the survey period. GHS was conducted from March/April to August/September whereas LFS was from May to July.
(2) ^a – To facilitate comparison with data for 2008 onwards, the 2007 data have been adjusted based on Singapore Department of Statistics' revised population estimates (released in February 2008) which exclude Singapore residents who have been away from Singapore for a continuous period of 12 months or longer.

2.4 More residents were employed in both PMET and non-PMET jobs in 2011, with a faster rate of increase over the year for PMETs (2.2%) than non-PMETs (1.5%). This was the second consecutive year that residents employed in non-PMET jobs had increased, after declining from 2006 to 2009. Over the decade, PMETs (4.3% p.a.) also experienced faster employment gains than non-PMETs (1.0% p.a.), resulting in an increase in PMETs' share of the resident workforce from 44% in 2001 to 52% in 2011.

Chart 15: Employed Residents by Occupation, 2001 to 2011 (As at June)

(A) Overall

Annualised Change (% p.a.)

	Total	PMETs	Non-PMETs
2001 to 2011 [^]	2.6	4.3	1.0
2001 to 2006	2.6	3.8	1.5
2006 to 2011 [^]	2.6	4.9	0.4
2010 to 2011	1.8	2.2	1.5

(B) Non-PMETs

Annualised Change (% p.a.)

	Clerical, Sales & Service Workers	Production & Transport Operators, Cleaners & Labourers*
2001 to 2011 [^]	1.7	0.2
2001 to 2006	2.0	1.1
2006 to 2011 [^]	1.4	-0.6
2010 to 2011	1.3	1.7

- Notes:
- (1) Figures in brackets refer to the share of employed residents in the respective occupational groups.
 - (2) * – Includes Agricultural & Fishery Workers and Workers Not Classifiable by Occupation.
 - (3) Data on number and share may not add up to the total due to rounding.
 - (4) The comprehensive Labour Force Survey was not conducted in 2005 due to the conduct of the General Household Survey 2005 by the Department of Statistics, Ministry of Trade and Industry.
 - (5) [^] – The growth rates are adjusted for the change in the definition of resident population estimates by Singapore Department of Statistics (released in February 2008) to exclude residents who have been away from Singapore for a continuous period of 12 months or longer. The figures were computed based on two sub-periods, 2001/2006 to 2007 (based on old definition) and 2007 to 2011 (based on new definition).
 - (6) Data were coded based on the Singapore Standard Occupational Classification (SSOC) 2010 for data from 2010 onwards, SSOC 2005 for 2006 to 2009 data and SSOC 2000 for 2001 to 2004 data. Hence, the data across the various years may not be strictly comparable due to revisions in the occupational classification.

2.5 Professionals and associate professionals & technicians had a relatively younger age profile, reflecting the higher educational requirements in these jobs which were more likely to be met by younger residents. Around six in ten residents working as professionals (64%) and associate professional & technicians (58%) in 2011 were aged below 40, compared with 44% in the entire resident workforce. The proportion of younger residents aged below 40 was also relatively high among clerical support workers (48%). This weighed down the median age of PMETs (39 years) and clerical, sales & service workers (42 years) relative to production & transport operators, cleaners & labourers (52 years).

Chart 16: Employed Residents by Occupation and Age, June 2011

- Notes: (1) [^] – Includes Agricultural & Fishery Workers and Workers Not Classifiable by Occupation which are not separately reflected.
 (2) Age distribution data for each occupation may not add up to 100% due to rounding.
 (3) Shaded cells in the table refer to occupations with a higher share of workers in the respective age groups than the average for the entire resident workforce.

2.6 Around six in ten residents employed in information & communications (62%) and financial & insurance services (59%) in 2011 were aged below 40, reflecting the higher concentration of PMETs in these industries. Community, social & personal services also had a relatively high proportion of those aged below 40 in their resident workforce (55%), boosted by the younger age profile of the uniformed services. On the other hand, administrative & support services (47%), accommodation & food services (44%) and transportation & storage (44%) had the highest proportion of older workers aged 50 & over in their resident workforce, reflecting the concentration of non-PMET jobs in these industries.

Chart 17: Employed Residents by Industry and Age, June 2011

- Notes: (1) [^] – Includes Agriculture, Fishing, Quarrying, Utilities and Sewerage & Waste Management which are not separately reflected.
 (2) Age distribution data for each industry may not add up to 100% due to rounding.
 (3) Shaded cells in the table refer to industries with a higher share of workers in the respective age groups than the average for the entire resident workforce.

Type of Employment

2.7 The large majority or nine in ten of the employed residents were working full-time in 2011, though the number of part-timers continued to rise from 176,700 or 9.0% of employed residents in 2010 to 194,700 or 9.7% in 2011. Part-time employment was more prevalent among females, youths and older residents. They were concentrated in non-PMET jobs, such as food preparation & kitchen assistants, shop sales assistants, cleaners, clerks, taxi drivers and waiters.

Chart 18: Part-Time Employed Residents by Sex, Age and Occupation, June 2011

- Notes: (1) * – Includes Agricultural & Fishery Workers and Workers Not Classifiable by Occupation.
 (2) Incidence refers to the number of part-time employed residents as a percentage of employed residents in the respective groups.
 (3) Data on number and distribution may not add up to the total due to rounding.

2.8 47% of the part-timers were willing and available to work additional hours (i.e. time-related underemployed) in 2011, down from 49% in 2010. However, their number increased from 86,600 or 4.4% of all employed residents in 2010 to 91,200 or 4.6% in 2011, reflecting the rise in part-time employment. Residents in their 20s to 40s had lower underemployment rates (2.1 to 3.9%) than those in their 50s (6.1%) or older (10.0%), reflecting the higher prevalence of part-time employment among older residents. Better educated residents had lower underemployment rate than less educated residents, ranging from 2.3% for degree holders to 8.3% for those with below secondary qualifications.

Chart 19: Time-Related Underemployment Rate among Employed Residents, June 2011

Income

2.9 Nominal incomes rose strongly in 2011, amid a tighter labour market. The median monthly income from work (including employer CPF contributions) of full-time employed residents rose by 8.3% over the year to \$3,249 in 2011, after growing by 2.5% in 2010. Taking inflation into account, the median income rose in real terms by 2.9% in 2011, after a slight dip of 0.3% in 2010. Excluding employer CPF contributions, growth in income also accelerated in 2011, though by a slightly lower rate at 8.0% (nominal) and 2.6% (real). The adjustment for inflation is made using the Consumer Price Index (CPI) covering all items, including imputed rentals on owner-occupied accommodation (which do not involve actual expenditures by households). Excluding the latter, the real median income of full-time employed residents grew over the year by 3.9% (including employer CPF contributions) and 3.6% (excluding employer CPF contributions) in 2011.

Chart 20: Median Gross Monthly Income from Work of Full-Time Employed Residents, 2001 to 2011 (As at June)

- Notes:
- (1) Data exclude full-time National Servicemen.
 - (2) The comprehensive Labour Force Survey was not conducted in 2005 due to the conduct of the General Household Survey 2005 by the Department of Statistics, Ministry of Trade and Industry.
 - (3) Adjusted income levels for 2007 in the chart above are the same as the original income levels. See note 2 for [Chart 14](#).
 - (4) * – Deflated by Consumer Price Index at 2009 prices (2009 = 100). Figures in brackets are deflated by Consumer Price Index less imputed rentals on owner-occupied accommodation at 2009 prices (2009 = 100).

2.10 Cumulatively, the median monthly income from work (including employer CPF contributions) of full-time employed residents rose over the last five years by 33% or 5.8% p.a. from \$2,449 in 2006 to \$3,249 in 2011. The real increase after adjusting for inflation was 12% or 2.3% p.a. This outweighed the real loss in income of 0.7% or 0.1% p.a. in the earlier half of the decade from 2001 to 2006, when the economy was hit by the 2001 recession and the 2003 SARS outbreak. Over the decade from 2001 to 2011, the median income (including employer CPF contributions) rose by 11% or 1.1% p.a. in real terms.

2.11 Income (including employer CPF contributions) of residents at the 20th percentile level rose by 35% or 6.1% p.a. from \$1,286 in 2006 to \$1,733 in 2011, comparable to the median income growth over this five-year period. Factoring in inflation, the real income growth at the 20th percentile level was 14% or 2.6% p.a. This offset the income loss in the preceding five-year period from 2001 to 2006, resulting in a modest real income growth over the decade of 2.4% or 0.2% p.a. at the 20th percentile level.

Table 3: Change in Gross Monthly Income from Work of Full-Time Employed Residents, 2001 to 2011 (As at June)

	Nominal Change					
	2001 to 2011		2001 to 2006		2006 to 2011	
	Cumulative (%)	Annualised (% p.a.)	Cumulative (%)	Annualised (% p.a.)	Cumulative (%)	Annualised (% p.a.)
Including Employer CPF						
Median (50th Percentile)	36.1	3.1	2.6	0.5	32.7	5.8
20th Percentile	25.3	2.3	-7.0	-1.4	34.8	6.1
Excluding Employer CPF						
Median (50th Percentile)	39.3	3.4	3.2	0.6	35.0	6.2
20th Percentile	25.0	2.3	–	–	25.0	4.6
	Real Change*					
	2001 to 2011		2001 to 2006		2006 to 2011	
	Cumulative (%)	Annualised (% p.a.)	Cumulative (%)	Annualised (% p.a.)	Cumulative (%)	Annualised (% p.a.)
Including Employer CPF						
Median (50th Percentile)	11.2 (13.2)	1.1 (1.2)	-0.7 (-1.5)	-0.1 (-0.3)	11.9 (14.9)	2.3 (2.8)
20th Percentile	2.4 (4.2)	0.2 (0.4)	-10.0 (-10.7)	-2.1 (-2.2)	13.7 (16.7)	2.6 (3.1)
Excluding Employer CPF						
Median (50th Percentile)	13.8 (15.9)	1.3 (1.5)	-0.1 (-0.9)	– (-0.2)	13.9 (16.9)	2.6 (3.2)
20th Percentile	2.1 (4.0)	0.2 (0.4)	-3.2 (-4.0)	-0.6 (-0.8)	5.5 (8.3)	1.1 (1.6)

Notes: (1) Data exclude full-time National Servicemen.

(2) * – Deflated by Consumer Price Index at 2009 prices (2009 = 100). Figures in brackets are deflated by Consumer Price Index less imputed rentals on owner-occupied accommodation at 2009 prices (2009 = 100).

(3) '–': Nil or negligible.

Employment Status

2.12 Employees formed the bulk or 85% of the resident workforce in 2011, while the self-employed made up the remaining 15%. The number of self-employed residents grew over the year by 5.4% in 2011, faster than the increase of 1.2% among employees. Consequently, the share of the self-employed in the resident workforce rose by 0.5%-point over the year, after declining in the past three years. Nevertheless, the self-employed share was broadly comparable to a decade ago, as the growth in self-employed residents over this period (2.3% p.a.) was close to that of employees (2.6% p.a.).

Table 4: Employed Residents by Employment Status, 2001, 2010 and 2011 (As at June)

Employment Status	2001		2010		2011		Annualised Change (% p.a.)	
	Number	Distribution (%)	Number	Distribution (%)	Number	Distribution (%)	2001-2011*	2010-2011
Total	1,582,500	100.0	1,962,900	100.0	1,998,900	100.0	2.6	1.8
Employees	1,339,300	84.6	1,678,400	85.5	1,699,100	85.0	2.6	1.2
Self-Employed	243,100	15.4	284,600	14.5	299,800	15.0	2.3	5.4

Notes: (1) Data on number and distribution may not add up to the total due to rounding.

(2) * – The growth rates are adjusted for the change in the definition of resident population estimates by Singapore Department of Statistics (released in February 2008) to exclude residents who have been away from Singapore for a continuous period of 12 months or longer. The figures were computed based on two sub-periods, 2001 to 2007 (based on old definition) and 2007 to 2011 (based on new definition).

2.13 Nearly six in ten (59%) self-employed residents were own account workers (i.e. persons who operate their own business without employing any paid workers), making up 8.8% (176,900) of employed residents in 2011. They were fairly evenly distributed in PMET (e.g. working proprietors, real estate agents, insurance representatives, private tutors, securities & finance dealers & brokers) and non-PMET (e.g. taxi drivers, hawkers/stall holders) jobs. Employers formed 36% of the self-employed, representing 5.4% (108,200) of the resident workforce. The vast majority of them were in PMET occupations like working proprietors, managing directors, chief executives and general managers. The remaining self-employed residents were contributing family workers making up only 0.7% (14,800) of employed residents, mainly in lower-skilled jobs such as food/drink stall assistants and shop sales assistants.

Chart 21: Distribution of Self-Employed Residents by Broad Occupational Group, June 2011

Notes: (1) * – Includes Agricultural & Fishery Workers and Workers Not Classifiable by Occupation.
 (2) Data for each category of self-employed may not add up to 100% due to rounding.

Term Contract Employment

2.14 The number of resident employees on term contracts⁷ rose by 1.1% over the year to 188,400 in 2011. As the increase was comparable to the 1.2% for permanent employees, the share of contract workers among resident employees broadly stabilised at 11.4% in 2011 compared with 11.5% in 2010, after declining from the high of 12.7% in 2009.

2.15 The decline in incidence of term-contract employment from 2009 largely stemmed from residents on longer-term contracts of a year or more, whose share among resident employees fell from around 6% in 2006 to 2009 to about 5% in 2010 and 2011. The incidence of resident employees on short-term contracts of less than a year (including those on casual/on-call employment) stayed at around 7% in the recent three years, after increasing from the low of 5.8% in 2006 when the data were first collected.

⁷ Employees on term contracts refer to those on fixed-term contract of employment that will terminate on the expiry of a specific term unless it is renewed, as well as those on casual/on-call employment (i.e. where persons are employed on ad hoc basis, as and when the company requires additional manpower). On the other hand, permanent employees refer to those employed for an unspecified duration, i.e. they are not on term contracts.

Chart 22: Resident Employees on Term Contracts⁷, 2006 to 2011 (As at June)

(A) Overall

**(B) Term Contract of Less Than 1 Year
(Including Casual/On-Call Employment)**

(C) Term Contract of 1 Year or More

- Notes: (1) Data exclude full-time National Servicemen.
 (2) Incidence refers to employees on term contracts of the specific duration as a percentage of resident employees.
 (3) ^a – Adjusted figures for 2007. See note 2 for [Chart 14](#).

Job Change

2.16 Some 18.5% of employed residents in 2011 had changed their jobs at least once in the past two years, same as in 2010. Job change was more prevalent among younger residents than those older who were likely to be more settled in their careers. One in four (26%) employed residents aged 15 to 24 and three in ten (30%) of those aged 25 to 29 had changed jobs in the last two years, compared with around one in ten among older residents in their 50s (12%) or older (9.5%). Partly reflecting their younger age profile, tertiary-educated residents with degree (22%) or diploma & professional qualifications (20%) were more likely to have changed jobs in the last two years than those without tertiary qualifications (15 to 18%).

Chart 23: Proportion of Employed Residents Who Had Changed Jobs in the Last 2 Years, June 2011

Note: Data exclude full-time National Servicemen.

Years in Current Job

2.17 Reflecting population ageing and measures put in place by employers to allow their employees to work beyond the retirement age, the proportion of resident employees who had worked for a decade or longer in their current job continued to increase to 28% in 2011 from 25% in 2006, after declining from 27% in 2001. At the other end, the share of resident employees who had been with their current employer for less than a year decreased to 20% in 2011 from 23% in 2006, after increasing from 22% in 2001.

Chart 24: Distribution of Resident Employees by Years in Current Job, 2001, 2006 and 2011 (As at June)

Notes: (1) Data exclude full-time National Servicemen.
(2) Data for each year may not add up to 100% due to rounding.

2.18 The proportion of resident employees who had been with their current employer for at least ten years generally increased with age, peaking at about half or 47% of those aged 50 to 59 before decreasing to 41% for those aged 60 & over. Reflecting their younger age profile, proportionately fewer resident employees with degree or diploma & professional qualifications had worked in their current jobs for a decade or longer than those with post-secondary or lower qualifications.

Chart 25: Proportion of Resident Employees Who Had Worked for At Least 10 Years in Their Current Job, June 2011

Notes: (1) Data exclude full-time National Servicemen.
(2) '—': Nil or negligible.

Usual Hours Worked

2.19 The usual weekly hours worked among employed residents averaged (mean) 45.9 hours in 2011. This erased part of the increase in the preceding year, when the average usual hours worked per week rose from 45.6 hours in 2009 to 46.6 hours in 2010. Full-timers experienced a decline in average usual hours worked from 49.2 hours in 2010 to 48.6 hours in 2011. On the other hand, the average usual hours worked of part-timers was unchanged over the year at 21.6 hours.

Chart 26: Average (Mean) Usual Hours Worked Per Week of Employed Residents, 2010 and 2011 (As at June)

Note: Data exclude full-time National Servicemen.

2.20 In terms of the distribution of working time, the majority or 58% of employed residents in 2011 typically worked 35 to 48 hours per week. Around one in three (33%) employed residents usually clocked more than 48 hours of work a week, while the remaining one in ten or 9.8% had usual hours of less than 35 hours a week.

Table 5: Usual Hours Worked Per Week of Employed Residents by Age and Education, June 2011

Characteristics	Distribution by Usual Hours Worked Per Week (Based on All Employed) (%)						Average (Mean) Usual Hours Worked Per Week	
	Less than 15 hours	15-34 hours	35-43 hours	44 hours	45-48 hours	More than 48 hours	All Employed	Full-Time Employed
Total	2.1	7.8	25.3	10.7	21.6	32.6	45.9	48.6
Age Group (Years)								
15 – 24	6.8	13.2	26.7	9.7	23.6	20.0	40.9	46.4
25 – 29	0.5	2.9	27.2	10.9	26.7	31.8	46.9	47.7

Degree	1.1	3.5	26.8	9.3	22.3	37.1	46.9	48.2

- Notes: (1) Data exclude full-time National Servicemen.
(2) Data on distribution by usual hours worked per week for each age/education group may not add up to 100% due to rounding.
(3) Shaded cells refer to groups with a higher proportion of residents in the respective usual hours worked categories or with higher average (mean) usual hours worked than the overall average.

3 Unemployment

Unemployment lower than a year ago

3.1 With the sustained job creation, unemployment declined further, after improving significantly in 2010 from the high experienced during the 2009 recession. The resident unemployment rate and number decreased from the seasonally adjusted 4.5% or 89,600 persons in June 2009 to 3.1% or 65,000 in June 2010 and further to 3.0% or 62,600 in June 2011. Non-seasonally adjusted, there were 3.9% or 81,200 persons in the resident labour force who were unemployed in June 2011, compared with 4.1% or

84,400 in June 2010 and 5.9% or 116,300 in June 2009. This was among the lowest unemployment rate recorded in the decade for June periods, where unemployment is typically higher as graduates enter the labour market and students look for vacation jobs during their school holidays.

Chart 27: Resident Unemployment Rate and Number, 2001 to 2011 (As at June)

Source: Comprehensive Labour Force Survey (LFS), except 2005 data which are from the General Household Survey (GHS) 2005.

Note: ^a – Adjusted figures for 2007. See note 2 for [Chart 14](#).

Age and Education

3.2 The improvement in unemployment rate over the year was largely felt by youths aged 15 to 24 (from 9.9% to 9.2%) and residents aged 25 to 29 (from 5.6% to 4.7%). Notwithstanding the improvement, the unemployment rates for younger residents were still above the overall average. This reflected their greater extent of job search, as many of them were new entrants to the labour market and even after starting work, tended to change jobs more frequently. Nevertheless, young job seekers did not experience long unemployment spells. Only 3.2% of youth job seekers aged 15 to 24 and 13% of those aged 25 to 29 had been looking for work for at least 25 weeks in June 2011, compared with 19% of all unemployed residents. Consequently, the long-term unemployment rate of these two age groups (0.3% for those aged 15 to 24 and 0.6% for residents aged 25 to 29) were lower than for all residents (0.7%).

3.3 The unemployment rate improved across the education groups, barring a marginal increase for those with secondary qualification (from 4.2% to 4.3%). The better educated residents with degree or diploma & professional qualifications continued to have lower unemployment rate than those less educated.

Chart 28: Resident Unemployment Rate by Age and Education, 2010 and 2011
(As at June) (Non-Seasonally Adjusted)

3.4 The unemployment rate for degree holders in most disciplines were below the resident average, especially those with degrees in Architecture & Building (1.6%), Education (2.4%), Health Sciences (2.6%), Engineering Sciences (2.9%) and Law (3.0%). The exceptions were Mass Communication & Information Science (7.1%), Fine & Applied Arts (5.1%) and Natural, Physical, Chemical & Mathematical Sciences (4.6%), which had above-average unemployment rates in June 2011.

Chart 29: Resident Unemployment Rate of Degree Holders by Field of Study, June 2011 (Non-Seasonally Adjusted)

Note: [^] – Includes other small fields of study which are not separately reflected.

Previous Occupation and Industry

3.5 In this subsection, we examine the unemployment rate by occupation and industry to understand the extent to which workers from different occupations and industries are vulnerable to unemployment. The data are computed using the previous occupation and industry of unemployed residents with work experience. It should be noted that the unemployed may not necessarily be looking for work in the same occupation or industry that they were previously in.

3.6 Underscoring the greater employability of better-educated persons, PMETs (2.4%) experienced lower unemployment rate than clerical, sales & service (5.7%) and production & related (4.3%) workers. The differential in unemployment rates partly also reflected the variation in staff turnover, with clerical, sales & service workers typically experiencing faster turnover than the other broad occupational groups.⁸

Chart 30: Resident Unemployment Rate by Occupation, June 2011 (Non-Seasonally Adjusted)

- Notes: (1) The unemployment rate by occupation is obtained by dividing the number of unemployed who previously worked in a given occupation by the sum of the number of workers employed in this occupation and the unemployed who previously worked in the occupation.
 (2) Data exclude unemployed residents without work experience.
 (3) [^] – Includes Agricultural & Fishery Workers and Workers Not Classifiable by Occupation which are not separately reflected.

⁸ The average monthly resignation rate for clerical, sales & service workers in the second quarter of 2011 was 3.2%, compared with 2.2% for production & related workers and 1.5% for PMETs. Correspondingly, the average monthly recruitment rate was higher among clerical, sales & service workers at 4.0% than production & related workers at 2.8% and PMETs at 2.2%.

3.7 Accommodation & food services and administrative & support services (both 5.9%) had the highest unemployment rate among the major industries in 2011, reflecting their weaker occupational profile. At the other end, financial & insurance services (2.5%), community, social & personal services (2.7%) and construction (2.8%) had the lowest unemployment rate in 2011.

Chart 31: Resident Unemployment Rate by Industry, June 2011 (Non-Seasonally Adjusted)

- Notes:
- (1) The unemployment rate by industry is obtained by dividing the number of unemployed who previously worked in a given industry by the sum of the number of workers employed in this industry and the unemployed who previously worked in the industry.
 - (2) Data exclude unemployed residents without work experience.
 - (3) ^ – Includes Agriculture, Fishing, Quarrying, Utilities and Sewerage & Waste Management which are not separately reflected.

Duration of Unemployment

3.8 With unemployment at a low after recovering from the 2009 recession, the unemployment duration among resident job seekers shortened further. 68% of the unemployed residents in June 2011 had been looking for work for less than 15 weeks, up from 66% a year ago. The proportion of resident job seekers with unemployment duration of 15 to 24 weeks decreased over the year from 14% to 13%. Similarly, the proportion with long unemployment duration of 25 weeks or more decreased from 20% to 19% which helped reduce the resident long-term unemployment rate further to 0.7% in June 2011 from 0.8% in June 2010, after hitting a high of 1.3% in June 2009 during the recession.

Chart 32: Distribution of Unemployed Residents by Duration of Unemployment, 2010 and 2011 (As at June)

Note: Data for each year may not add up to 100% due to rounding.

3.9 Overall, the median duration of unemployment among resident job seekers was 8 weeks in June 2011, same as a year ago. Youth job seekers aged 15 to 24 (4 weeks) and those aged 25 to 29 (6 weeks) had the shortest median duration of unemployment among the age groups, suggesting that unemployment among younger residents was largely frictional. Job seekers with below-secondary qualifications had longer median duration of unemployment (10 weeks) than those more educated (6 to 8 weeks).

Chart 33: Median Duration of Unemployment among Unemployed Residents, June 2011

Modes of Job Search

3.10 Unemployed residents most commonly answered job advertisements or wrote to firms in their job search, with close to six in ten (59%) of them doing so in 2011. The use of the internet (51%) and asking friends or relatives (50%) were also popular modes of job search among resident job seekers.

3.11 Less educated job seekers were more likely to answer advertisements/ write to firms or ask their friends or relatives for help in their job search than better educated job seekers. On the other hand, proportionately more unemployed residents with degree (79%) or diploma & professional (76%) qualifications used the internet to look for jobs than their lower-educated counterparts.

Table 6: Proportion of Unemployed Residents by Education and Action Taken to Look for Jobs, June 2011

Educational Attainment	Per Cent						
	Answered advertisements/ wrote to firms	Used the internet to search for jobs	Asked friends or relatives	Registered with employment service or agency	Registered for jobs at job fairs	Made preparations to start own business	Others
Total	59.3	50.8	50.0	19.6	8.3	3.6	1.0
Below Secondary	62.5	14.1	65.3	12.8	3.9	1.4	1.1
Secondary	62.8	42.8	52.8	19.2	6.6	2.8	0.2
Post-Secondary (Non-Tertiary)	61.1	47.2	45.1	25.9	8.0	3.2	1.7
Diploma & Professional Qualification	50.1	75.5	46.3	22.5	9.5	4.6	0.6
Degree	58.3	78.9	37.7	21.3	13.5	6.0	1.3

- Notes: (1) Respondents can indicate more than one action taken to look for jobs.
 (2) Shaded cells refer to groups with a higher proportion of unemployed residents who took the specific action to look for jobs than the overall average.

4 Economically Inactive

Family responsibilities, schooling/attending courses/training, poor health/disability/old age and retirement were common reasons for economic inactivity

4.1 Around one in three (33.9%) or 1.07 million residents aged 15 & over were neither working nor looking for a job (i.e. economically inactive) in June 2011. Reflecting the higher incidence of economic inactivity among females (43.0%) than males (24.4%), females made up nearly two in three (65%) of the economically inactive residents. A large majority of economically inactive males were from the two ends of the age spectrum, where the incidence of economic inactivity was the highest. Close to half (46%) of the economically inactive men were aged 15 to 24, while another four in ten (39%) were aged 60 & over. The economically inactive women were more spread out across the age groups, as the incidence of economic inactivity among prime-working age women was much higher than for men in the same age groups.

4.2 Reflecting their greater employability and higher opportunity cost of not working, the better educated residents had lower economic inactivity rate than those less educated. Consequently, around three in four (76%) economically inactive residents had secondary or lower qualifications.

Table 7: Profile of Economically Inactive Residents, June 2011

Characteristics	Total			Males			Females		
	Number	Distribution (%)	Incidence (%)	Number	Distribution (%)	Incidence (%)	Number	Distribution (%)	Incidence (%)
Total	1,068,600	100.0	33.9	373,800	100.0	24.4	694,800	100.0	43.0
Age Group (Years)

Degree	81,200	7.6	12.1	20,700	5.5	6.1	60,500	8.7	18.2

Note: Data on number and distribution may not add up to the total due to rounding.

4.3 Reflecting the concentration of women, youths and older persons among residents outside the labour force, the common reasons for their economic inactivity were family responsibilities (housework, childcare, care-giving to families/relatives) (31%), schooling/attending courses/training (30%), poor health/disability/old age (20%) and retirement (13%).

Table 8: Economically Inactive Residents by Main Reason for Economic Inactivity, June 2011

Main Reason for Economic Inactivity	Total		Males		Females	
	Number	Distribution (%)	Number	Distribution (%)	Number	Distribution (%)
Total	1,068,600	100.0	373,800	100.0	694,800	100.0
Family Responsibilities*	335,000	31.4	6,700	1.8	328,400	47.3
Schooling/Attending Courses/Training	325,400	30.5	164,900	44.1	160,500	23.1
Poor Health/Disabled/Too Old	208,900	19.6	78,500	21.0	130,400	18.8
Retired	140,700	13.2	90,600	24.2	50,100	7.2
Taking a Break	21,900	2.1	10,700	2.9	11,200	1.6

Others	15,300	1.4	5,500	1.5	9,700	1.4

Notes: (1) * – Includes housework, childcare and care-giving to families/relatives.
(2) Data may not add up to the total due to rounding.

4.4 While the vast majority of prime-working age men participated in the labour market, there were nevertheless 37,000 economically inactive men aged 25 to 54 in June 2011, comparable to 36,100 a year ago. They were not working or looking for work mostly because of poor health/disability (32%), schooling/attending courses/training (22%) or were taking a break (18%). With the increase in female labour force participation, the number of economically inactive women in the prime-working ages fell over the year from 234,300 to 221,000 in June 2011. The large majority or 85% of them were outside the labour force mainly because of family responsibilities.

4.5 Amid their rising labour force participation, the number of older residents aged 55 to 64 who were outside the labour force also decreased. There were 49,200 men and 125,400 women aged 55 to 64 who were economically inactive in June 2011, down from 50,200 and 127,300 respectively in June 2010. The common reasons for economic inactivity among older men were retirement (53%) and poor health/disability/old age (31%), while the majority (68%) of older women cited family responsibilities as their main reason for being outside the labour force.

Table 9: Main Reason for Economic Inactivity by Selected Age Groups and Sex, June 2011

(A) Aged 25 to 54			
	Total	Males	Females
Number of Economically Inactive Residents	258,000	37,000	221,000
Main Reason for Economic Inactivity (%)	100.0	100.0	100.0
Family Responsibilities	74.2	8.2	85.2
<i>Housework</i>	43.4	0.9	50.6

Poor Health/Disabled/Too Old	19.2	30.9	14.6
Taking a Break	1.6	3.8	0.7
Discouraged	1.5	3.9	0.6
Others	2.4	3.2	2.1

Notes: (1) * – Includes a small number who cited old age as the main reason for economic inactivity.
(2) Data may not add up to the total due to rounding.

Discouraged Workers

4.6 Discouraged workers declined for the second successive year, after hitting a high in the 2009 recession. The number of residents discouraged from seeking work fell from 11,100 in 2009 to 10,900 in 2010 and more sharply to 8,600 in 2011. They formed only 0.4% of the resident labour force inclusive of discouraged workers, down from 0.5% in 2010 and 0.6% in 2009.

Chart 34: Residents Discouraged from Seeking Work, 2001 to 2011 (As at June)

- Notes:
- (1) Discouraged workers are persons outside the labour force who were not actively looking for a job because they believed their job search would not yield results. Reasons cited for being discouraged include: (a) Believes no suitable work available; (b) Employers' discrimination (e.g. prefer younger workers) and (c) Lacks necessary qualification, training, skills or experience.
 - (2) Incidence refers to discouraged workers as a percentage of the resident labour force (inclusive of discouraged workers).
 - (3) The comprehensive Labour Force Survey was not conducted in 2005 due to the conduct of the General Household Survey 2005 by the Department of Statistics, Ministry of Trade and Industry.
 - (4) ^a – Adjusted figures for 2007. See note 2 for [Chart 14](#).

4.7 Nearly two in three (64%) residents discouraged from seeking work in 2011 were aged 50 & over. This reflected their higher incidence of being discouraged (0.9%) compared with those in younger age groups, ranging from 0.1% for those in their 30s to 0.3% for those in their 40s. The incidence of discouraged workers decreased with educational attainment from 0.8% for the below-secondary group to 0.2% among those with diploma & professional qualifications and degree holders. Consequently, nearly seven in ten (68%) of the discouraged workers had only secondary or lower qualifications.

Table 10: Profile of Residents Discouraged from Seeking Work, June 2011

Characteristics	Number	Distribution (%)	Incidence (%)
Total	8,600	100.0	0.4
Sex			
Males	5,600	65.0	0.5
Females	3,000	35.0	0.3
Age Group (Years)			
Below 30	800	9.5	0.2
30 – 39	500	6.3	0.1
40 – 49	1,700	20.1	0.3
50 & Over	5,500	64.1	0.9
Educational Attainment			
Below Secondary	3,800	43.7	0.8
Secondary	2,100	24.4	0.5
Post-Secondary (Non-Tertiary)	900	10.3	0.4
Diploma & Professional Qualification	700	7.9	0.2
Degree	1,200	13.7	0.2

- Notes:
- (1) Discouraged workers are persons outside the labour force who were not actively looking for a job because they believed their job search would not yield results. Reasons cited for being discouraged include: (a) Believes no suitable work available; (b) Employers' discrimination (e.g. prefer younger workers) and (c) Lacks necessary qualification, training, skills or experience.
 - (2) Incidence refers to discouraged workers as a percentage of the resident labour force (inclusive of discouraged workers).
 - (3) Data on number and distribution may not add up to the total due to rounding.

Potential Entrants

4.8 The number and incidence of potential entrants into the labour force declined in 2011, reversing from the uptrend in the last three years. Some 153,600 or 14.4% of economically inactive residents in 2011 intended to look for a job within the next two years, down from 171,900 or 16.5% in 2010.

Chart 35: Resident Potential Entrants into the Labour Force, 2006 to 2011 (As at June)

- Notes: (1) Potential entrants refer to economically inactive persons who intended to look for a job within the next two years.
 (2) Incidence refers to potential entrants as a percentage of economically inactive residents.
 (3) Comparable data series on potential entrants started from 2006.
 (4) ^a – Adjusted figures for 2007. See note 2 for [Chart 14](#).

4.9 The incidence of potential entrants was higher among the younger prime-working age groups, where slightly over one in two (53%) economically inactive residents aged 25 to 29 and one in three (33%) of those in their 30s intended to look for a job in the next two years. The incidence of potential entrants rose with educational attainment, ranging from 6.6% of those with below-secondary qualifications to 33% among degree holders. Nevertheless, the lower-educated residents with secondary or lower qualifications formed a slight majority or 52% in the pool of potential entrants, reflecting the high concentration of the less educated among economically inactive residents.

Table 11: Profile of Resident Potential Entrants into the Labour Force, June 2011

Characteristics	Total			Males			Females		
	Number	Distribution (%)	Incidence (%)	Number	Distribution (%)	Incidence (%)	Number	Distribution (%)	Incidence (%)

Age Group (Years)									
15 – 24	61,700	40.2	18.2	24,800	44.9	14.4	36,900	37.5	22.2
25 – 29	13,700	8.9	53.0	6,900	12.5	71.6	6,800	6.9	42.0
30 – 39	23,500	15.3	33.0	3,900	7.1	57.7	19,500	19.9	30.4
40 – 49	21,700	14.1	22.1	4,400	7.9	41.2	17,300	17.6	19.8
50 – 59	19,200	12.5	13.5	7,000	12.7	24.3	12,200	12.4	10.8
60 & Over	13,800	9.0	3.5	8,300	15.0	5.7	5,500	5.6	2.2
Educational Attainment									
Below Secondary	36,100	23.5	6.6	14,500	26.2	8.1	21,500	21.9	5.9
Secondary	44,200	28.8	16.6	14,800	26.8	14.5	29,400	30.0	17.9
Post-Secondary (Non-Tertiary)	22,300	14.5	22.3	9,500	17.2	23.1	12,700	13.0	21.8
Diploma & Professional Qualification	24,200	15.8	31.7	9,700	17.5	31.3	14,600	14.8	31.9
Degree	26,800	17.4	33.0	6,800	12.2	32.8	20,000	20.3	33.1
Work Experience									
With Work Experience	110,800	72.1	17.5	38,600	69.8	16.9	72,200	73.5	17.8
Without Work Experience	42,800	27.9	9.8	16,700	30.2	11.5	26,100	26.5	9.0
Preference for Full-Time/Part-Time Employment									
Full-Time	89,000	58.0	n.a.	34,100	61.7	n.a.	54,900	55.9	n.a.
Part-Time	64,500	42.0	n.a.	21,200	38.3	n.a.	43,400	44.1	n.a.

- Notes: (1) Potential entrants refer to economically inactive persons who intended to look for a job within the next two years.
(2) Incidence refers to potential entrants as a percentage of economically inactive residents.
(3) n.a.: Not applicable.
(4) Data on number and distribution may not add up to the total due to rounding.

4.10 Overall, nearly six in ten (58%) or 89,000 of the potential entrants in 2011 preferred to work full-time, while the other four in ten (42%) or 64,500 preferred part-time employment. Unlike the younger potential entrants who mostly preferred to work full-time, the majority of mature female potential entrants aged 40 & over (66%) and older males aged 60 & over (64%) preferred to work part-time.

Chart 36: Proportion of Resident Potential Entrants Who Preferred to Work Part-Time by Age Group and Sex, June 2011

Note: Potential entrants refer to economically inactive persons who intended to look for a job within the next two years.

Types of Jobs That Potential Entrants Were Prepared to Take Up

4.11 An ad hoc survey on Barriers to Work conducted by the Manpower Research and Statistics Department in March/April 2011 on a sample of economically inactive older residents aged 50 to 64 with previous work experience and women in the prime-working age of 25 to 49 found that respondents with the intention to work within the next two years were prepared to take up jobs that were *part-time* (females aged 25 to 49: 89%, older females and males aged 50 to 64: 94% each) or *temporary* (71%, 83%, 84%) and jobs that *require lower qualifications/experience than they currently have* (66%, 72%, 65%). This suggests that many of these potential entrants could be seeking less demanding types of jobs that enable them to fulfil their personal and family responsibilities. Around four in ten (37%, 36%, 42%) were prepared to take up jobs that *offer no fixed salary*.

4.12 Jobs with difficult working conditions were less popular among the potential entrants, with females generally being less receptive towards such jobs than older males. Females were less likely than males to take up jobs that *require long working hours* (females aged 25 to 49: 10%, older females aged 50 to 64: 6.5%, older males aged 50 to 64: 23%), *long travelling time* (11%, 7.6%, 23%), *are physically demanding* (15%, 13%, 19%), *require shift work* (14%, 23%, 35%), and *working on weekends* (16%, 21%, 35%). On the other hand, females (aged 25 to 49: 32%, aged 50 to 64: 40%) were more prepared to take up jobs that *require waiting on customers* than older males (19%).

Chart 37: Types of Jobs That Potential Entrants Were Prepared to Take Up, March/April 2011

Source: Survey on Barriers to Work, 2011

- Notes: (1) Data are based on individuals who were economically inactive when surveyed in March/April 2011, but had the intention to look for work within the next two years.
 (2) Respondents can indicate more than one type of job.

Motivating Factors

4.13 The same ad hoc survey found that six in ten (60%) females aged 25 to 49 who did not intend to return to work in the next two years would consider doing so if one or more motivating factors were present. The proportion was lower for older persons aged 50 to 64 at 34% among males and 37% among females.

4.14 Availability of jobs that offer *part-time or flexible work arrangements* was the top motivator (prime-working age females: 66%, older females: 59%, older males: 46%) among economically inactive residents that could be motivated to return to the workforce. This was followed by availability of *jobs that are near home* (44%, 42%, 30%), which was more commonly cited by females.

4.15 Among females in the prime-working ages of 25 to 49, jobs that *do not require working on shifts or weekends* (31%) or *with reasonable pay* (20%) were also significant factors. The availability of *suitable childcare services* played a factor mainly for women in this age group, though the proportion indicating this was not large (17%). This suggests that a sizeable group of prime-working age females are keen to return to work if they are able to find employment that allows them to both work and take care of their children.

4.16 Among older persons aged 50 to 64, availability of jobs with *reasonable pay* (females: 26%, males: 28%), *low stress levels* (24%, 22%), *do not require working on shifts or weekends* (22%, 20%) and *that are similar to their previous job* (13%, 25%) were also fairly significant motivators. In addition, close to one in five older persons (females: 18%, males: 19%) would be motivated to return if *employers and the working environment are more open and friendly to older workers*.

Chart 38: Factors That Can Motivate Individuals to Look for Work, March/April 2011

Source: Survey on Barriers to Work, 2011

- Notes: (1) Data are based on those who did not indicate that they intend to look for work within two years and who can be motivated.
 (2) Respondents can select more than one motivating factor.
 (3) '—': Nil or negligible.

5 Concluding Remarks

5.1 The employment rate rose to a new high in 2011, reflecting the sustained improvement among women and older residents. Amid a tighter labour market, the median income of residents in full-time employment rose faster than a year ago, even after taking inflation into account.

PART II

Survey Coverage and Methodology

SURVEY COVERAGE AND METHODOLOGY

Introduction

1 The 2011 comprehensive Labour Force Survey is the thirty-fourth in the series of mid-year labour force surveys conducted in Singapore by the Manpower Research and Statistics Department of the Ministry of Manpower. The objective of the survey is to collect data on the economic activities of the population, including detailed information on employment and unemployment, characteristics of the labour force and economically inactive persons.

2 The survey is conducted under the Statistics Act (Chapter 317) which empowers the Director of the Manpower Research and Statistics Department to collect data on the economic activities of the population in Singapore. The Act also guarantees the confidentiality of individual information obtained from the survey.

Coverage

3 The survey covers private households on the main island of Singapore. It excludes workers living in construction worksites, dormitories and workers' quarters at the workplace and persons commuting from abroad to work in Singapore. Estimates of the total labour force are derived by combining data on residents obtained from the survey with foreign workforce data compiled from administrative records.

Data Collected

4 The survey questionnaire was designed to collect pertinent data on the personal characteristics of the population and detailed information on the economic characteristics of the labour force. The items collected in the questionnaire included:

For All Persons Aged Fifteen Years And Over

Sex

Age

Educational attainment

Economic activity status

For Residents Aged Fifteen Years And Over

Marital status

Field of study

For Employed Residents Aged Fifteen Years And Over

Occupation

Industry

Gross monthly income from work

Employment status

Whether working full-time or part-time

Whether employed on permanent or term contract basis

Usual hours worked

Duration of employment in present job

Willingness and availability of part-timers to work additional hours

For Unemployed Residents Aged Fifteen Years And Over

Duration of unemployment

Action taken to look for work

Working experience

Previous occupation

Previous industry

Reason for leaving previous job

For Economically Inactive Residents Aged Fifteen Years And Over

Reason for being economically inactive

Working experience

Whether persons intend to look for work in future

Preference for full-time or part-time work

Concepts and Definitions

5 The concepts and definitions used in the survey conform to international guidelines recommended by the International Labour Organisation. The terms and definitions used are as follows:

Household

A household is made up of persons who share common accommodation and food arrangements. A household may consist of only one person or many persons.

Reference Period

This refers to the week preceding the date of the survey interview.

Educational Attainment

This refers to the highest level or standard which a person has passed or attained either through attendance at an institution of learning or through correspondence or self-study. The classification of educational attainment is based on the Singapore Standard Educational Classification (SSEC), 2010.

A person is classified into one of the following categories according to the highest qualification attained:

No Formal Qualification/Lower Primary	:	This refers to those who have never attended school, or have primary education but without Primary School Leaving Examination (PSLE) certificate or their equivalent, or have Certificate in Basic Education for Skills Training (BEST) 1-3.
---------------------------------------	---	--

- Primary : This refers to those who have PSLE or other certificate of equivalent standard, or have Certificate in BEST 4 or at least 3 Employability Skills System (ESS) Workplace Literacy and Numeracy (WPLN) Statements of Attainment at Level 1 or 2.
- Lower Secondary : This refers to those who have secondary education without a General Certificate of Education (GCE) Normal ('N')/Ordinary ('O') Level pass or equivalent, or have Certificate in Worker Improvement through Secondary Education (WISE) 1-3, or basic vocational certificates (including Institute of Technical Education (ITE) Basic Vocational Training), or at least 3 ESS WPLN Statements of Attainment at Level 3 or 4.
- Secondary : This refers to those who have at least 1 GCE 'N'/'O' Level pass, or have National ITE Certificate (Intermediate) or equivalent (e.g. National Technical Certificate Grade 3, Certificate of Vocational Training, Building and Construction Authority (BCA) Builder Certificate), or have ITE Skills Certificate (ISC) or equivalent (e.g. Certificate of Competency, Certificate in Service Skills) or at least 3 ESS WPLN Statements of Attainment at Level 5 and above, or other certificates/qualifications of equivalent standard.
- Post-Secondary (Non-Tertiary) : This refers to those who have at least 1 GCE Advanced ('A')/Higher 2 ('H2') Level pass or other certificates/qualifications of equivalent standard. It also includes those who have National ITE Certificate (NITEC) (e.g. Post NITEC Certificate, Certificate in Office Skills, National Technical Certificate Grade 2, National Certificate in Nursing, Advanced Builder Certificate), or have Higher NITEC (including Certificate in Business Skills, Industrial Technician Certificate and other polytechnic certificates), or Master NITEC or equivalent (e.g. National Technical Certificate Grade 1). This group also includes Workforce Skills Qualifications (WSQ) Certificate/Higher Certificate/Advanced Certificate or equivalent, International Baccalaureate/High school diploma or other advanced certificates (e.g. Singapore Institute of Management (SIM) certificates).

Polytechnic Diploma	: This refers to those who have Polytechnic diploma, or Polytechnic advanced diploma (including Polytechnic advanced/post/specialist/management/graduate diploma), or Polytechnic post-diploma certificate.
Professional Qualification and Other Diploma	This refers to those who have qualifications awarded by professional bodies, or National Institute of Education (NIE) Diploma, ITE diploma and other diploma qualifications (e.g. SIM diploma, LaSalle-SIA diploma, Nanyang Academy of Fine Arts (NAFA) diploma, WSQ diploma and WSQ specialist diploma).
Degree	: This refers to those who have Bachelor Degree, or Postgraduate Diploma (including NIE postgraduate diploma), or Masters, or Doctorate. It also includes persons with WSQ graduate certificate and WSQ graduate diploma.

Field of Study

This refers to the principal discipline, branch or subject matter of study that leads to the award of the highest qualification attained at degree, diploma & professional qualification levels.

Activity Status

Persons are classified as economically active or inactive.

Economically Active Population	: This refers to persons aged fifteen years and over who are either employed (i.e. working) or unemployed (i.e. available and actively looking for work) during the reference period. This group is also known as the labour force.
Economically Inactive Population	: This refers to persons aged fifteen years and over who are neither employed nor unemployed during the reference period.

Employed Persons

This refers to persons aged fifteen years and over who, during the reference period:

- i) work for one hour or more either for pay, profit or family gains; or
- ii) have a job or business to return to but are temporarily absent because of illness, injury, breakdown of machinery at workplace, labour management dispute or other reasons.

Members of the Singapore Armed Forces including full-time National Servicemen are included in the persons employed, unless otherwise specified.

Unemployed Persons

This refers to persons aged fifteen years and over who are not working but are available for work and are actively looking for a job during the reference period. They include persons who are not working but are taking steps to start their own business or taking up a new job after the reference period.

Unemployment Rate

This is defined as the percentage of unemployed persons to economically active persons.

Duration of Unemployment

This refers to the number of complete weeks between the date when action was first taken to look for a job and the date of the survey interview.

Long-Term Unemployed Persons

This refers to persons aged fifteen years and over who have been unemployed for 25 weeks or more.

Long-Term Unemployment Rate

This is defined as the percentage of long-term unemployed persons to economically active persons.

Time-Related Underemployed Persons

This refers to persons aged fifteen years and over who are working less than 35 hours a week and are willing and available to engage in additional work.

Time-Related Underemployment Rate

This is defined as the percentage of time-related underemployed persons to employed persons.

Age-Sex Specific Labour Force Participation Rate

This is defined as the percentage of economically active persons to the population in the specific sex and age group.

Age-Sex Specific Employment Rate

This is defined as the percentage of employed persons to the population in the specific sex and age group.

Employment Status

This refers to the position or status of an employed person in relation to other persons within the organisation he works in. Employed persons are divided into the following four categories:

Employers	: These are persons who employ at least one paid worker in their business or trade.
Employees	: These are persons who work for employers in return for regular wages or salaries.
Own Account Workers	: These are persons who operate their own business without employing any paid workers in the conduct of their business or trade.
Contributing Family Workers	: These are persons who assist in the operation of family business without receiving regular wages or salaries.

Type of Employment

Employed persons can be categorised into those working on full-time or part-time basis.

- | | | |
|-----------|---|--|
| Full-time | : | This refers to employment where the normal hours of work is at least 35 hours a week. |
| Part-time | : | This refers to employment where the normal hours of work is less than 35 hours a week. |

Before 2009, full-time refers to employment where the normal hours of work is at least 30 hours a week while part-time refers to employment where the normal hours of work is less than 30 hours a week. From 2009 onwards, the threshold between full-time and part-time was revised from 30 hours to 35 hours to align with the revised definition in the Employment Act.

Employees can be categorised into those employed on term contract or permanent basis.

- | | | |
|---------------|---|---|
| Term Contract | : | Employees on term contracts refer to those on fixed-term contract of employment that will terminate on the expiry of a specific term unless it is renewed, as well as those on casual/on-call employment (i.e. where persons are employed on ad hoc basis, as and when the company requires additional manpower). |
| Permanent | : | Permanent employees refer to those employed for an unspecified duration, i.e. they are not on term contracts. |

Occupation

This refers to the type of work performed by a person, which may not necessarily be related to his training, skill or professional qualification. In the case of a person who performs two or more kinds of work, his occupation would refer to the one in which he spent the greatest part of his working time and/or from which he derived the greatest share of his income during the reference period. The classification of occupations is based on the Singapore Standard Occupational Classification (SSOC), 2010, unless otherwise specified.

Industry

This refers to the major kind of activity undertaken by the establishment, enterprise, firm or organisation in which the person worked during the reference period. It is related to the principal class of goods produced or services rendered by the organisation. The classification of industries is based on the Singapore Standard Industrial Classification (SSIC), 2010, unless otherwise specified.

Gross Monthly Income from Work

This refers to income earned from employment. For employees, it refers to the gross monthly wages or salaries before deduction of employee CPF contributions and personal income tax. It comprises basic wages, overtime pay, commissions, tips, other allowances and one-twelfth of annual bonuses. For self-employed persons, gross monthly income refers to the average monthly profits from their business, trade or profession (i.e. total receipts less business expenses incurred) before deduction of income tax.

Usual Hours Worked

This refers to the number of hours that a person usually works in a typical week, regardless of whether he is paid or not. The concept of usual hours of work differs from that of normal hours of work referred to in contractual arrangements. For a person who has just started work during the reference period, usual hours of work refers to the number of hours per week he is expected to work in that job. For a multiple jobholder, it should be aggregated from the hours spent in all the jobs.

Discouraged Workers

This refers to persons outside of the labour force who are not actively looking for a job because they believe their job search would not yield results. Reasons cited for being discouraged include belief that there is no suitable work available, employers' discrimination and lack of necessary qualifications, training, skills or experience.

Training Participation Rate

The training participation rate (also known as training incidence rate) is defined as the proportion of residents aged 15 to 64 in the labour force who had engaged in some form of job-related structured training or education activities over the 12-month period ending June. Job-related structured training or education refers to training that is related to a current or future job. It includes classroom training, private lessons, correspondence courses, workshops, seminars, structured on-the-job training (OJT), apprenticeship training and mandatory courses. However, it excludes informal on-the-job training such as watching a video on management skills, observing others perform a task at work, time spent at work learning new tasks and keeping up to date with work-related developments by reading journals/newspapers and informal discussions.

Training Intensity

Training intensity is defined as the duration of structured training per adult. It is derived by multiplying the training participation rate by average training days per trainee.

Residents

Residents (also known as locals) refer to Singapore citizens and Permanent Residents.

Sampling Design

6 The sample used for the comprehensive Labour Force Survey is selected using a two-stage stratified design. For the determination of an appropriate sample size, studies on the sample estimates and variances were made. Other factors that were taken into consideration were cost, time and manpower resources. The sample selection is undertaken by the Singapore Department of Statistics, Ministry of Trade and Industry, which maintains a National Database of Dwellings in Singapore. The selection is done in accordance with the specified sampling criteria.

7 The sampling units for the first stage consist of sampling divisions demarcated by geographical boundaries (based on URA's planning areas). To improve the efficiency of the sample selection and the quality of the sample, sampling divisions that contain relatively small number of housing units are merged with larger entities to reduce the variation in size of the sampling divisions.

First Stage Sample Selection of Sampling Divisions

8 During the first stage selection, the sampling divisions are stratified into three predominant housing types, namely, 'Public Flats', 'Private Houses and Flats' and 'Others' which include shophouses and attap/zinc-roofed houses. From this, a certain number of sampling divisions are systematically selected. The probability of a particular sampling division being selected is proportionate to the number of housing units in that sampling division.

Second Stage Sample Selection of Individual Houses

9 Within each selected sampling division, the housing units are stratified by the following housing types:

- i) HDB flats and other public flats;
- ii) Condominiums and private flats;
- iii) Landed properties; and
- iv) Others which include shophouses and attap/zinc-roofed houses.

10 For every chosen sampling division, a fixed number of housing units is selected by systematic sampling with a random start. The probability of selection for the housing units is inversely proportionate to the size of the sampling division.

11 This method of two-stage stratified sampling yields an overall equal probability and self-weighting sample. It also ensures good control over the desired sample size.

Planning, Organisation, Fieldwork and Data Verification

12 The Manpower Research and Statistics Department undertook the planning and operation of the survey. These included the preparation of the questionnaire and related documents, survey design, recruitment and training of staff, supervision and control of field work, editing and checking on the completed cases, data verification and compilation.

13 Field operation for the 2011 survey was carried out from 25 May to 31 July 2011. Around 120 temporary interviewers and 20 permanent staff were involved in the survey operation. The majority of the temporary interviewers were university undergraduates as the period of the field operation coincided with their vacation. Comprehensive training sessions comprising classroom and role-play were conducted for the interviewers.

14 The majority of the households completed the survey through telephone or internet. Households that did not respond through these options were enumerated through face-to-face interviews. Under the Integrated Manpower Survey System (iMSS), the interviewer would key the information directly into the computer notebook as the interview was being conducted. The use of automatic routing in the iMSS system ensured that all relevant questions were asked. The system also has an auto-error checking function to prompt interviewers of missing, invalid or inconsistent entries so that these can be corrected on the spot. The information collected was subjected to further editing checks by field supervisors and iMSS administrators.

15 The work of the interviewers was closely monitored to ensure the quality of the data collection. Supervisors also conducted random field checks by calling up selected households to verify the information collected. The data were subjected to further consistency and verification checks built into the computer system before processing.

Reliability of Data

16 The results of the survey were grossed up to the resident population as at June 2011 (compiled by the Singapore Department of Statistics) using multiple estimation factors. Being a sample survey, the results were inevitably subjected to sampling and non-sampling errors.

Sampling Errors

17 In a sample survey, inferences about the target population are drawn from the data collected from the sample. Errors due to extension of the conclusions based on one sample to the entire population are known as sampling errors. The sampling error of an estimate is the difference between the estimated value obtained from a sample and the actual value from the population. Factors influencing the sampling error include the sample size, the sample design, method of estimation, the variability of the population and the characteristics studied.

18 The most common measure of the sampling error of an estimate is its standard error, which is a measure of the variation among the estimates derived from all possible samples. An alternative measure is the relative standard error of an estimate which indicates the standard error relative to the magnitude of the estimate. As a general rule, the smaller the group whose size is estimated or from which an estimate is being derived, the less precise that estimate is.

19 A sample estimate and an estimate of its standard error can be used to construct an interval that will, at specified levels of confidence, include the actual value. By statistical convention, the confidence level has been set at 95 per cent.

20 For the 2011 survey, the estimated sampling errors of the main resident labour force estimates were as follows:

	Estimate	Standard Error	Relative Standard Error (%)	95% Confidence Interval	
				Lower	Upper
Economically Active Residents	2,080,100	6,300	0.3	2,067,800	2,092,400
Employed Residents	1,998,900	6,300	0.3	1,986,500	2,011,300
Unemployed Residents	81,200	1,800	2.3	77,600	84,800
Economically Inactive Residents	1,068,600	5,700	0.5	1,057,500	1,079,800
Resident Labour Force Participation Rate	66.1%	0.18%-pt	0.3	65.8%	66.4%
Resident Unemployment Rate	3.9%	0.09%-pt	2.3	3.7%	4.1%

21 As many sample estimates can be computed from the survey, it would be impractical to estimate the sampling errors for all estimates. A generalised table of sampling errors for the Labour Force Survey based on a simple random sample is presented as follows:

Size of Estimate	Proportion of Total Resident Population (%)	Standard Error	Relative Standard Error (%)	95% Confidence Interval	
				Lower	Upper
2,000,000	52.78	6,300	0.32	1,987,600	2,012,400
1,000,000	26.39	5,600	0.56	989,100	1,010,900
500,000	13.20	4,300	0.85	491,600	508,400
200,000	5.28	2,800	1.41	194,500	205,500
100,000	2.64	2,000	2.02	96,000	104,000
50,000	1.32	1,400	2.88	47,200	52,800
20,000	0.53	900	4.58	18,200	21,800
10,000	0.26	600	6.48	8,700	11,300
5,000	0.13	500	9.17	4,100	5,900
2,000	0.05	300	14.51	1,400	2,600
1,000	0.03	200	20.52	600	1,400
500	0.01	100	29.02	200	800
200	0.01	100	45.88	—	400

22 Data users are advised to take cognisance of the sampling error of the estimate and exercise judgement on whether the estimate is reliable for their intended purpose. Specifically, caution is to be exercised in interpreting results of detailed cross-tabulations for small sub-groups as these could have large sampling errors.

Non-Sampling Errors

23 Non-sampling errors could result from the varying interpretation of questions by respondents and interviewers, inability or unwillingness of respondents to provide correct information, mistakes in recording, coding and processing. These errors have been minimised by careful design of the questionnaire, intensive training and supervision of interviewers, as well as strict data processing controls.

Response

24 Of the 33,000 housing units selected in the initial sample, 1,496 households were excluded from the survey as they were unoccupied, non-residential or demolished. A total of 28,592 households responded to the survey, achieving an overall response rate of 90.8%.

Impact of Population Revision on Labour Force Data

25 Being a sample survey, data obtained from the Labour Force Survey are grossed up using population estimates from Singapore Department of Statistics (DOS). DOS has refined the resident population estimates for June 2008 onwards to exclude Singapore residents who have been away from Singapore for a continuous period of 12 months or longer. Before June 2008, the labour force data are grossed up using DOS's original resident population estimates which comprise all persons whose usual residence is in Singapore. Hence, the resident labour force data for 2008 onwards are not strictly comparable with those published in earlier years.

26 To facilitate comparison with data for 2008 onwards, adjusted labour force estimates for 2007 based on the revised population estimates are published, alongside the original estimates in the key time series tabulations. The adjustment assumes that the proportion of persons overseas for at least 12 months in the 2007 Labour Force Survey was the same as that in the 2008 survey. Adjusted data for 2007 are denoted by the symbol ^a. The impact of the population revision is more significant for level data of large estimates such as the resident labour force or employed residents and less so for rates and proportions derived from level data of the same year as shown below.

	June 2007	June 2007 (adjusted)	Difference
	(a)	(b)	(b) – (a)
Economically Active Residents	1,918,100	1,878,000	-40,100
Employed Residents	1,842,100	1,803,200	-38,900
Unemployed Residents	76,100	74,800	-1,300
Economically Inactive Residents	1,026,500	1,009,200	-17,300
Resident Labour Force Participation Rate (%)	65.1	65.0	-0.1
Resident Unemployment Rate (%)	4.0	4.0	–
Resident Employment Rate of Population Aged 25-64 (%)	76.5	76.5	–

27 A suggested method to compute the annualised growth in the size of labour force over a period which spans 2007 is illustrated in the worked example below.

Example: Suppose we want to compute the annualised growth in the number of economically active persons from 2001 to 2011. With the break in series in 2007, we can estimate the change as follows:

<u>Year</u>	<u>Number of Economically Active Persons</u>
2001	2,330,500
2007 (Original)	2,750,500
2007 (Adjusted)	2,710,300
2011	3,237,100

The annualised growth from 2001 to 2011 can be computed based on two sub-periods, 2001 to 2007 (based on old definition of population estimates) and 2007 to 2011 (based on new definition)

- Annualised growth from 2001 to 2007, based on original 2007 figures:

$$= \left[\left(\frac{2,750,500}{2,330,500} \right)^{\frac{1}{6}} - 1 \right] \times 100$$

= 2.8% p.a.

- Annualised growth from 2007 to 2011, based on adjusted 2007 figures:

$$= \left[\left(\frac{3,237,100}{2,710,300} \right)^{\frac{1}{4}} - 1 \right] \times 100$$

= 4.5% p.a.

Therefore, the annualised growth in number of economically active persons from 2001 to 2011

$$= \left\{ \left[\left(1 + \frac{\text{Annualised growth from 2001 to 2007}}{100} \right)^6 \left(1 + \frac{\text{Annualised growth from 2007 to 2011}}{100} \right)^4 \right]^{\frac{1}{10}} - 1 \right\} \times 100$$

which reduces to:

$$= \left\{ \left[\frac{\text{Labour force level in 2007 (original)}}{\text{Labour force level in 2001}} \times \frac{\text{Labour force level in 2011}}{\text{Labour force level in 2007 (adjusted)}} \right]^{\frac{1}{10}} - 1 \right\} \times 100$$

$$= \left[\left(\frac{2,750,500}{2,330,500} \times \frac{3,237,100}{2,710,300} \right)^{\frac{1}{10}} - 1 \right] \times 100$$

= 3.5% p.a.

Labour Force Survey Supplement on Training, 2011

28 A Labour Force Survey Supplement on Training, 2011 was conducted from 31 August to 30 September 2011 following the close of the fieldwork for the comprehensive Labour Force Survey. The Survey aimed to capture information on participation in job-related structured training by the resident labour force during the 12-month period ending June 2011. It also sought to ascertain the duration of training and training outcomes. 2,958 economically active residents aged 15 to 64 years (excluding full-time National Servicemen) were surveyed, of whom 2,817 or 95.2% responded.

PART III

Statistical Tables

TABLE 1
LABOUR FORCE, EMPLOYED, UNEMPLOYED AND UNEMPLOYMENT RATE, 2001 - 2011
 (As At June)

Mid-Year	Labour Force ('000)		Employed ('000)		Unemployed ('000)		Unemployment Rate ¹ (Seasonally Adjusted) (%)		Unemployment Rate (Non-Seasonally Adjusted) (%)	
	Total	Residents	Total	Residents	Total	Residents	Total	Residents	Total	Residents

2010	3,135.9	2,047.3	3,047.2	1,962.9	88.8	84.4	2.2	3.1	2.8	4.1
2011	3,237.1	2,080.1	3,149.7	1,998.9	87.4	81.2	2.1	3.0	2.7	3.9

Notes :

1) The seasonally adjusted unemployment figures are subject to annual revisions when the latest set of seasonal factors is updated, taking into account observations for the latest available year. Users are advised to check our website, www.mom.gov.sg/statistics-publications, for the most up-to-date data.

2) Data for 2005 are not available as the Comprehensive Labour Force Survey was not conducted due to the conduct of the General Household Survey by Department of Statistics, Ministry of Trade and Industry.

3) To facilitate comparison with data for 2008 onwards, the 2007 data have been adjusted based on Singapore Department of Statistics' revised population estimates (released in February 2008) which exclude Singapore residents who have been away from Singapore for a continuous period of 12 months or longer. Adjusted data for 2007 are denoted by the symbol ^a. Details are in the section on Survey Coverage and Methodology.

Notes :

1) Data on median gross monthly income from work pertain to full-time employed residents excluding full-time National Servicemen. Before 2009, full-time employment refers to employment where the normal hours of work is at least 30 hours per week. From 2009 onwards, it refers to employment where the normal hours of work is at least 35 hours per week.

2) Data for 2005 are not available as the Comprehensive Labour Force Survey was not conducted due to the conduct of the General Household Survey by Department of Statistics, Ministry of Trade and Industry.

3) To facilitate comparison with data for 2008 onwards, the 2007 data have been adjusted based on Singapore Department of Statistics' revised population estimates (released in February 2008) which exclude Singapore residents who have been away from Singapore for a continuous period of 12 months or longer. Adjusted data for 2007 are denoted by the symbol ^a. Details are in the section on Survey Coverage and Methodology.

2010	88.8	3.3	7.9	92.4	3.4	4.2	75.0	2.7	22.3
2011	89.1	3.0	7.9	92.6	3.0	4.3	76.4	2.9	20.8

Notes :

1) The unemployed figures refer to the unemployed as a percentage of population. This is different from the unemployment rate, which is expressed as a percentage of the labour force.

2) Data for 2005 are not available as the Comprehensive Labour Force Survey was not conducted due to the conduct of the General Household Survey by Department of Statistics, Ministry of Trade and Industry.

3) To facilitate comparison with data for 2008 onwards, the 2007 data have been adjusted based on Singapore Department of Statistics' revised population estimates (released in February 2008) which exclude Singapore residents who have been away from Singapore for a continuous period of 12 months or longer. Adjusted data for 2007 are denoted by the symbol ^a. Details are in the section on Survey Coverage and Methodology.

Notes :

1) Before 2009, full-time employment refers to employment where the normal hours of work is at least 30 hours per week. From 2009 onwards, it refers to employment where the normal hours of work is at least 35 hours per week.

2) Data for 2005 are not available as the Comprehensive Labour Force Survey was not conducted due to the conduct of the General Household Survey by Department of Statistics, Ministry of Trade and Industry.

3) To facilitate comparison with data for 2008 onwards, the 2007 data have been adjusted based on Singapore Department of Statistics' revised population estimates (released in February 2008) which exclude Singapore residents who have been away from Singapore for a continuous period of 12 months or longer. Adjusted data for 2007 are denoted by the symbol ^a. Details are in the section on Survey Coverage and Methodology.

Notes :

1) Data for 2005 are not available as the Comprehensive Labour Force Survey was not conducted due to the conduct of the General Household Survey by Department of Statistics, Ministry of Trade and Industry.

2) To facilitate comparison with data for 2008 onwards, the 2007 data have been adjusted based on Singapore Department of Statistics' revised population estimates (released in February 2008) which exclude Singapore residents who have been away from Singapore for a continuous period of 12 months or longer. Adjusted data for 2007 are denoted by the symbol ^a. Details are in the section on Survey Coverage and Methodology.

Notes :

1) Data for 2005 are not available as the Comprehensive Labour Force Survey was not conducted due to the conduct of the General Household Survey by Department of Statistics, Ministry of Trade and Industry.

2) To facilitate comparison with data for 2008 onwards, the 2007 data have been adjusted based on Singapore Department of Statistics' revised population estimates (released in February 2008) which exclude Singapore residents who have been away from Singapore for a continuous period of 12 months or longer. Adjusted data for 2007 are denoted by the symbol ^a. Details are in the section on Survey Coverage and Methodology.

Notes :

1) Data for 2005 are not available as the Comprehensive Labour Force Survey was not conducted due to the conduct of the General Household Survey by Department of Statistics, Ministry of Trade and Industry.

2) To facilitate comparison with data for 2008 onwards, the 2007 data have been adjusted based on Singapore Department of Statistics' revised population estimates (released in February 2008) which exclude Singapore residents who have been away from Singapore for a continuous period of 12 months or longer. Adjusted data for 2007 are denoted by the symbol ^a. Details are in the section on Survey Coverage and Methodology.

TABLE 71
ANNUAL AVERAGE RESIDENT UNEMPLOYMENT RATE AND UNEMPLOYED RESIDENTS,
2001 - 2010

Period	Resident Unemployment Rate (%)	Unemployed Residents ('000)
2001	3.7	62.0
2002	4.8	81.0
2003	5.2	91.2
2004	4.4	78.4
2005	4.1	74.9
2006	3.6	67.6
2007	3.0	56.7
2008	3.2	62.9
2009	4.3	86.9
2010	3.1	64.8

Notes :

1) Annual figures are the simple averages of the non-seasonally adjusted unemployment figures obtained at quarterly intervals.

2) At the time of printing, data for 2011 are not available. Users are advised to check our website, www.mom.gov.sg/statistics-publications, for the most up-to-date data.

TABLE 72
QUARTERLY RESIDENT UNEMPLOYMENT RATE, MARCH 2001 - SEPTEMBER 2011

Period	Per Cent										
	2001	2002	2003	2004	2005	2006	2007	2008	2009	2010	2011
Seasonally Adjusted											
March	2.6	5.0	5.0	4.9	4.2	3.3	3.7	2.8	4.7	3.3	2.7
June	3.0	4.5	4.7	4.7	4.4	3.5	3.0	3.0	4.5	3.1	3.0
September	3.9	4.9	6.2	4.0	4.4	3.8	2.4	3.3	4.9	3.1	2.9
December	5.2	4.9	5.2	4.2	3.5	3.8	2.5	3.9	3.3	3.1	n.a.
Non-Seasonally Adjusted											
March	2.2	4.2	4.2	4.3	3.7	2.9	3.4	2.6	4.4	3.1	2.6
June	3.8	5.6	5.9	5.8	5.6	4.5	4.0	4.0	5.9	4.1	3.9
September	3.3	4.2	5.4	3.4	3.8	3.2	2.1	2.8	4.1	2.6	2.5
December	5.5	5.2	5.4	4.2	3.4	3.6	2.3	3.5	2.9	2.7	n.a.

Notes :

1) Data for June 2005 are from the General Household Survey conducted by Singapore Department of Statistics, Ministry of Trade & Industry.

2) The seasonally adjusted unemployment figures are subject to annual revisions when the latest set of seasonal factors is updated, taking into account observations for the latest available year. Users are advised to check our website, www.mom.gov.sg/statistics-publications, for the most up-to-date data.

Notes :

1) Data for 2005 are not available as the Comprehensive Labour Force Survey was not conducted due to the conduct of the General Household Survey by Department of Statistics, Ministry of Trade and Industry.

2) To facilitate comparison with data for 2008 onwards, the 2007 data have been adjusted based on Singapore Department of Statistics' revised population estimates (released in February 2008) which exclude Singapore residents who have been away from Singapore for a continuous period of 12 months or longer. Adjusted data for 2007 are denoted by the symbol ^a. Details are in the section on Survey Coverage and Methodology.

Notes :

1) Data for 2005 are not available as the Comprehensive Labour Force Survey was not conducted due to the conduct of the General Household Survey by Department of Statistics, Ministry of Trade and Industry.

2) To facilitate comparison with data for 2008 onwards, the 2007 data have been adjusted based on Singapore Department of Statistics' revised population estimates (released in February 2008) which exclude Singapore residents who have been away from Singapore for a continuous period of 12 months or longer. Adjusted data for 2007 are denoted by the symbol ^a. Details are in the section on Survey Coverage and Methodology.

Notes :

1) Data for 2005 are not available as the Comprehensive Labour Force Survey was not conducted due to the conduct of the General Household Survey by Department of Statistics, Ministry of Trade and Industry.

2) To facilitate comparison with data for 2008 onwards, the 2007 data have been adjusted based on Singapore Department of Statistics' revised population estimates (released in February 2008) which exclude Singapore residents who have been away from Singapore for a continuous period of 12 months or longer. Adjusted data for 2007 are denoted by the symbol ^a. Details are in the section on Survey Coverage and Methodology.

1) Incidence refers to potential entrants as a percentage of economically inactive residents.

FEEDBACK FORM

1. How useful is the *Report on Labour Force in Singapore* to you?

☐

Very Useful

☐

Useful

☐

Not Useful

2. How do you make use of the data in the Report?

3. How do you find the section on Survey Findings?

☐

Too detailed

☐

Just right

☐

Too brief

☐

Not necessary

4. Does the contents generally meet your needs?

☐

Yes

☐

No

5. What additional information (if any) would you like us to include in our future issues?

6. Any other comments or suggestions you wish to bring to our attention?

Thank you for your valuable feedback

Just Released

Employment Situation, 2011

Date of Release: 31 Jan 2012

This release provides preliminary estimates of key indicators on the manpower situation covering employment, unemployment and redundancy for the full year and includes trends on Singaporeans' monthly income from work.

Report on Labour Force in Singapore, 2011

Date of Release: 31 Jan 2012

This publication presents a comprehensive range of statistical information on the economic activities of the population, including detailed analysis and data on employment, unemployment, characteristics of the labour force and economically inactive persons. It also examines a wide range of topics including training, income, term contract employment, hours worked and modes of job search. The information would be useful to policy makers, researchers and the community-at-large who have an interest in the world of work and the lives of workers.

The comprehensive Labour Force Survey of Singapore was introduced in 1974 to provide reliable and timely statistical information on the labour market. The survey is designed to capture a wide range of data on the economic activities of the population, including detailed information on employment, unemployment and the characteristics of the labour force and economically inactive persons. Starting from 2001, a Labour Force Survey Supplement on Training has also been conducted to capture information on the incidence and intensity of training by the Singapore labour force.

The report is divided into three parts. The first part analyses the key trends and structure of the labour force. The second part on survey methodology describes the objective, coverage, concepts and definitions, sampling design and reliability of data as well as other operational aspects of the survey. A total of 95 statistical tables are included in the third part of the report.
